**The oral iron with**

**the most**

**consistent haemoglobin**

**response**

With 'Fergon'\* a more marked rise in the haemoglobin level may be expected in all patients requiring oral iron therapy. Absence of gastrointestinal upsets results in better absorption and utilization of iron and is especially valuable, where there may be intolerance to other iron salts, in ensuring that the treatment is followed regularly.

'Fergon' is best taken about an hour before meals. The average dose is 1 to 2 tablets thrice daily.

\* *specially prepared crystalline ferrous gluconate.*
