THE FIRST OF A SERIES

Ericsson Magneto Telephone
circa 1900

By courtesy of the Postmaster General

STILL used in Lagos, Nigeria, but, unhappily, fast disappearing.

Time was when the asthmatic regarded his telephone as a link with safety. Today, if he has been prescribed Franol-Plus, he is far more likely to ring his friends to say he's better than his doctor to say he's worse. Franol-Plus, combining the well-known bronchodilator, Franol, and an anti-histamine, Thenfadil, reduces the frequency and severity of asthmatic and bronchitic attacks both by day and night.

Dosage: 3 tablets per day, to be adjusted as necessary.

Basic N.H.S. cost 2/2d per week.

Each tablet contains Theophylline (anhydrous) 120 mg., Phenobarbitone 8 mg., Ephedrine sulphate 15 mg., Thenfadil 10 mg.
