for the control of **PAIN**

**just one tablet**

**Pain is but a symptom,  
best treated with the lowest  
effective dose  
of any medicament**

Clinical experience shows that, in fibrositis, dysmenorrhoea, sinusitis, and other commonly encountered conditions of persistent pain, just one tablet of Paramol-118 every four hours provides relief.

By fortifying 500 mg paracetamol with a low dose (10 mg) of dihydrocodeine it is possible to control pain with a minimum daily intake of both drugs: in such low dosage the possibility of side effects is remote.

Needless to say, if necessary, this dosage can be increased to two tablets every four hours—and, even at this higher dosage level, risk of any really undesirable side effect is insignificant.

Costs, too, are kept low: with one tablet every four hours the basic NHS cost of a day's therapy is only about 2p.

Formula Each tablet contains:  
Paracetamol BP 500 mg  
Dihydrocodeine tartrate BP 10 mg

**Low dosage, low cost in  
the control of pain**

**Paramol-118**
