NEW LIGHT ON HEADACHE

Lifting the "Pain Threshold"

Some parts of our brain are much more sensitive than others. These lines indicate certain centres that cannot transmit pain at all.

And here close to them are other centres of the brain that are very sensitive to pain.

Why this aspirin-*plus*-phenacetin formula works better than aspirin alone

STEADILY, researchers have increased our knowledge of *pain*—its cause and its cure. Now they have even learned how to *measure* pain.

They have a name for the *lowest degree of pain stimulus that will cause a man or woman to feel pain*. They call it the "pain threshold." And they know which drugs can "lift" the pain threshold—that is, make the patient less sensitive to pain—and by how much, and for how long.

A REMARKABLE COMBINATION

One of their greatest discoveries, in the search for a harmless, non-habit-forming drug that would relieve pain, was *aspirin*. Another was *phenacetin* (pronounced fe-nassy-tin).

Perhaps even more remarkable—
they have discovered

that these two taken together in balanced proportions work better than either aspirin or phenacetin taken alone. And they relieve pain longer.

That is the story behind the Phensic formula. Phensic contains *both* aspirin and phenacetin. This combination goes into action as soon as you take a tablet. Almost at once your headache goes, your *emotional reaction* to pain is calmed. And because the Phensic formula also contains caffeine, it counteracts depression.

Whatever your pain may be—*headache, nerve pain, toothache, pain from neuralgia, rheumatic conditions, lumbago*—you will find Phensic a wonderful boon. It is quick, effective and long-lasting. Carry Phensic with you, and you need never fear an attack of headache, wherever you may be.
