ANAHÆMIN

B.D.H.

**The Haematopoietic Liver-Principle
described by Dakin and West**

The potency of Anahæmin B.D.H. in causing blood regeneration in pernicious anæmia is such that the daily injection of so little as one twenty-fifth of 1 c.c. produces a rapid increase in the red blood count.

In average cases, however, an initial dose of 2 c.c. should be given, followed by 1 c.c. at 10-day intervals until the blood count has remained normal for a month.
