THIRTY-SECOND ANNUAL REPORT

On Medical Inspection, Supervision, and Treatment of School Children,

for the

Year Ended 31st July, 1951

COUNTY OF RENFREW.

EDUCATION COMMITTEE

THIRTY-SECOND ANNUAL REPORT

On Medical Inspection, Supervision, and Treatment of School Children,

for the

Year Ended 31st July, 1951

Printed by Alexander Gardner Ltd., 11 Dyers' Wynd, Paisley. To the Chairman and Members of the Education Committee of the County Council of the County of Renfrew.

LADIES AND GENTLEMEN,

I have the honour to present the Annual Report on Medical Inspection, Supervision, and Treatment of School Children in the County of Renfrew for the year ended 31st July, 1951. The Report has been prepared by Dr. C. D. Rankin, Chief Executive School Medical Officer, and is compiled in accordance with the revised form set out in Part II. of the Appendix to Circular N.M. & C. No. 60/1938.

I am,

Your faithfully,

J. S. M. GRAY, County Medical Officer.

LIST OF STAFF.

Chief Administrative School Medical Officer-J. S. M. Gray, M.B., D.P.H.

(a) Whole-time School Service.

Chief Executive School Medical Officer-C. D. Rankin, M.D., D.P.H.

School Medical Officers-

Chief Dental Officer-M. Paterson, L.D.S.

School Dental Officers-

E. R. Sloan, L.D.S. C. Stewart, L.D.S. J. Wright, L.D.S. D. Dowie, L.D.S. (left 29/10/50).
M. Couchlin, L.D.S.
J. Hair, L.D.S. (app. 28/5/51).

School Nurses-

Paisley Burgh-E. Robb. J. MacInnes. D. Hally. M. Neil. Greenock Burgh-M. Fulton. M. M'Callum. M. Brockie. G. M'William.

Physiotherapist-M. Sivewright, M.C.S.P. Clerk-R. Brown.

Audiometrists-

R. Seedhouse.

Mrs. Craig.

Clerks-

Paisley Burgh— County— B. Love (left 28/3/51). S. M'Lelland. E. Stewart (app. 7/4/51). M. Conway (app. 9/4/51).

Greenock Burgh-M. Rankin. M. Mackinnon.

Clinic Attendants-

Paisley Burgh-E. Mason. County— C. Wade. A. Wright. Mrs. Hamilton (app. 2/10/50).

Dental Clinic Attendants-

J. Stewart. A. Glancey.

C. M'Gonigle. A. M'Tavish. M. Lowson. Greenock Burgh-S, Donald.

E. Muggins. J. Ferguson.

(b) Part-time School Service.

Specialist Medical Officers-

Oculist-J. B. Adams, M.B.

Aurist-J. C. Watt, M.B.

Dermatologist-R. W. Carslaw, M.D.

Orthopædist-A. Keith, F.R.C.S.

School Medical Officers-

G. J. Sturrock, M.B., D.P.H.A. F. Dickson, M.B., D.P.H.G. M'Lintock, M.D., D.P.H.

M. Chapman, M.B. (left 15/4/51). M. MacArthur, M.B. (app. 16/7/51).

School Nurses-

M. Canfield. E. Paul. W. Callan. M. MacLean. J. Frederick. M. Robb. M. Kennedy. J. Rae (left 15/1/51). M. Power M. Gibson B. M'Ninch M. Mitchell. E. M'Quade. I. Steele. R. Long. N. Short (left 5/3/51). C. Caldwell,
A. Armstrong (app. 22/1/51).
M. Sweeney (app. 1/5/51).
J. Guy (app. 1/2/51).

Clinic Attendants-

Mrs. Rew. S. Gardiner. A. Doyle. M. Scorgie.

Principal Educational, Psychologist-V. M'Laren, M.A., Ed.B., Ph.D.

Master of Works-T. Hepburn, A.R.I.A.S.

During the year, 13,401 ROUTINE MEDICAL INSPEC-TIONS were completed of pupils born in the years 1934, 1937, and 1941, along with all new Entrants. 2,526 children born in 1943 had their Vision and Hearing tested.

157 children attending NURSERY SCHOOLS were also inspected, and 1,203 children were examined prior to going to Camp Schools and Switzerland. 28.2 per cent. of all children examined at the Routine Inspections were notified to the parents as requiring treatment (excluding uncleanliness and dental caries).

Medical Officers are instructed to work in co-operation with the family doctor. The ethical question of one doctor taking to do with another doctor's patient should not arise if the delicacy of the position is realised by both, and each is prepared to respect the efforts of the other to do his best for the most important member involved, viz., the child.

The School Nurses paid 1,210 Home Visits during the year and made 10,863 re-examinations.

MEDICAL INSPECTION OF SCHOOL CHILDREN has now been in operation since 1908. Children to-day are better shod and clad and are cleaner, although there still remain numbers of cases of head-nits, which require much supervision and treatment to prevent the spread of infection.

Rickets as a crippling disease has now disappeared. Crippling deformities to-day arise mainly from the various forms of paralysis.

Tuberculous disease of bones, joints, glands, and skin is now comparatively much rarer.

Children are heavier and taller at all ages. (The value of milk as an addition to the child's diet in promoting growth was established after experiment with school children.)

The problems of dental caries are still unsolved. Formerly the best teeth were found amongst the scholars in the poorer schools but this is no longer true.

Diseases of the Ear and Defective Vision are still prevalent.

Warts and Infantile Eczema are up-to-date problems for the Skin Specialist. A new approach to the treatment of Defects of Speech is now possible by the recognition of defective hearing within the range of the normal frequencies of sound used in speech. In the Ear, Nose, and Throat Specialist's report, the results of the hearing tests conducted in 4,407 children born in the year 1941 are given. These tests have been carried out by two Audiometrists using both the Gramophone and the Pure Tone Audiometers.

After recovering from tubercular meningitis treated with Streptomycin, four children are now in attendance at the Schools for the Deaf. It would appear that their lives have been saved at the expense of their hearing.

The ORTHOPAEDIC CLINICS are now well established, but to relieve congestion at these clinics and the time of the physiotherapist, all cases of postural deformities will be dealt with at the Remedial Clinics where classes are already organised and held regularly. Every outbreak of Infantile Paralysis leaves behind a number of children who will have to attend the Orthopaedic Clinics for long periods.

There are 9 Centres for CHILD GUIDANCE and PSYCHO-LOGICAL treatment, where 236 children attended on account of some emotional maladjustment or behaviour disorder and 231 for SPEECH THERAPY.

The SPECIAL SCHOOLS continue to give excellent service to the physically and mentally handicapped, to the blind and the deaf.

The SPECIALISTS' SERVICES of the REGIONAL HOSPITAL BOARD are detailed in the tables under their respective headings of "Eyes"—"Ear, Nose, and Throat"— "Skin"—and "Orthopaedics."

Reports of the SANITARY CONDITION of the SCHOOLS are made regularly and are forwarded to the Master of Works for attention. A short report by the Master of Works is included.

The Organisation and Administration were fully detailed in the Report for the year ending 31st July, 1936.

The SCHOOL HEALTH SERVICE has played, and continues to play, a great part in the life, health, and happiness of the children. The ultimate value to the nation cannot be estimated.

I thank the Office Staff for the preparation of the tables and statistics for this report which has entailed much exacting work.

> C. D. RANKIN, M.D., D.P.H., Chief Executive School Medical Officer.

MASTER OF WORKS REPORT.

The cleansing of all schools is the responsibility of the Master of Works' Department and is carried out by Janitors and Cleaners. Cleaners are allocated on the basis of one cleaner per 500 square yards of floor space. The Janitor is directly responsible to the Master of Works for the carrying out of his duties and the reporting of any repairs or maintenance work which comes to his notice. He is also responsible for the supervision of the cleansing staff and the maintenance of a high standard of cleanliness throughout all premises in accordance with the Authority's Cleansing Regulations.

Improvements to Education Property during the past year have been somewhat delayed, but every endeavour has been made to obtain the maximum benefit for the outlays expended. A detailed list of necessary repairs and maintenance has been prepared, which it is intended to overtake during the present financial year.

The progressive practice of improving playground surfaces with asphalt-surfacing instead of the usual tar-mac finish is now showing the benefit of the past few years' programmes of work. The worst playgrounds have now been dealt with. Expenditure, therefore, in this direction should be gradually reduced in the future.

The completion of the installation of electric lighting in all schools in the County has now been reached.

The damage caused by dry rot in several buildings is causing concern and considerable expense. The reason for this is thought to be the lack of adequate attention to the lead work and parapets, etc., during the war years. It is pleasing to report that final agreement has now been reached with the War Damage Commission as to the extent of the repair work to be carried out. Most of this is already instructed, though the final adjustment of several claims is still outstanding.

The improvement of the lavatory provision at schools is a major problem, and to make permanent improvements it is realised that drastic alterations must be undertaken, and, with this in mind, several capital works' projects are now contemplated.

The maintenance of grounds and grass plots, etc., is now undertaken by a newly-appointed groundsman.

New schools under construction are making reasonable progress, and the difficulties owing to the lack of labour and materials are being overcome. It is hoped to commence next year other projects for which plans are presently being prepared. The Library Service has been increased by the addition of several branches.

2. GENERAL STATISTICS.

6. B. EYE SPECIALIST'S REPORT.

There have been no notable changes in the work of the Specialist Eye Service during the year. The number of children examined continues to be high and various additional sessions have been undertaken. Clinics have continued as formerly at Paisley, Greenock, Port Glasgow, Johnstone, Barrhead, and Renfrew, with periodic visits to Sight-Saving Classes in order to maintain contact with children there.

Whilst the delay in the supply of glasses is now largely a thing of the past, the difficulties arising from children losing or breaking these still exist. Re-tests within a short period are not undertaken for those reasons alone (except in special circumstances), and it is pointed out that while the Executive Council gives every consideration to any recommendations we may make, the authority to supply glasses rests solely with it.

It need hardly be pointed out that in many cases, particularly Myopes, the education and the future of the child may be seriously affected by the want of properly correcting glasses.

Apart from refractive errors, the other cases dealt with were of the usual type—inflammatory conditions, squint, congenital defects, etc.

The liaison which exists with the Eye Infirmaries in Paisley and Greenock provides for operative or other special treatment which may be found necessary.

I have to record my appreciation of the help of the School Medical, Nursing and Clerical Staff, and also those parents who have co-operated in the work.

6. C. EAR, NOSE, AND THROAT SPECIALIST'S REPORT.

Throughout the year Routine Visits have been paid regularly to the various clinics and to the Special Schools in Paisley and Greenock.

706 children were recommended to have tonsils and adenoids removed, mostly for the improvement or conservation of hearing, and in a few cases for the improvement of the child's general health.

The co-operation of the family doctor is always sought in these cases by the despatch, from the clinic, of a report on the condition found and treatment recommended.

A great deal of work has been directed towards the discovery of minor degrees of deafness as well as to improving hearing and conserving what remains of hearing so that appropriate educational means may be employed to ensure that the child may become an independent social and economic unit in adult life.

During the year an Audiometric Survey was carried out in 4,407 children born in 1941. 'The tests were carried out by the Authority's two Audlometrists using both the Gramophone and the Pure Tone Audiometers.

Of 226 children who were finally selected for the Pure Tone Audiometer Test, 31 children were Graded 1; 21 children were Graded 2a; 2 children were Graded 2b; and 66 children had some degree of deafness in one ear only. Thus 1.49 per cent. of the total children examined had some degree of deafness in one ear, and 1.22 per cent. in both ears.

I desire to thank all those who so willingly co-operated the family doctors, the parents, the children themselves, and especially the nurses who by their patient expert work have contributed greatly to the improvement of the children.

Details of the Ear, Nose, and Throat Clinic are given in the table following.

6. D. ORTHOPAEDIC SPECIALIST'S REPORT

The work in the Orthopaedic Department has followed in most respects that done in previous years. There has again been a great increase in the number of patients seen and treated. As a result, the problems of space and of personnel for carrying out the treatments have become more acute than ever. In the case of those conditions where treatment can advantageously be given by classes, accommodation is not sufficiently often available for the number of classes required and there is considerable overcrowding. Where individual treatments are required, as in the case of patients suffering from Infantile Paralysis and Cerebral Palsy, the time of the Physiotherapist is too fully occupied to allow of more than a bare minimum of attention being given to each patient. To allow the service to develop as it is at present doing, more room and staff is required, otherwise the number of patients will have to be restricted.

Details of the work will be found in the following table :---

6 D.-Specialist's Orthopædic Clinics.

Torticollis, Tuberculosis (Bones, Joints and Hips), Deformities, Infantile Paralysis, Spastic Paraplegia, etc. The following is a list of conditions for which children attended the Orthopædic Clinics :---

6. E. CHIEF DENTAL OFFICER'S REPORT.

Inspection and treatment were carried out this year, by the School Dental Officers, on children in the 6, 10, and 11 years age groups. Acceptance rate as usual was high, and the attendance of the children at the Clinics for treatment satisfactory.

The condition of the teeth in the older age groups is good.

Throughout the year there were numerous requests from parents desiring treatment for their children at the School Clinics. With the depleted dental staff it is not possible to carry out routine treatment on any further age groups.

The Mobile Dental Unit has been garaged since last October, when Mr. Dowie, the dental officer in charge, resigned to take up an appointment with the Eastern Regional Hospital Board. It is to be regretted if this valuable asset to the School Health Service is to remain out of commission.

The summary showing the amount of work done will be found in the following table :---

Table V. 6 E.-Dental Inspection and Treatment.

6. F. SKIN SPECIALIST'S REPORT.

The work of the Clinics in Paisley and Greenock has not shown any significant change from last year. The number of new cases and of attendances is slightly less, but the ratio of new cases to attendances shows an improvement being now 1 to 2.3 (last year 1 to 3.2). As mentioned last year, I feel that this is a rough measure of the success of the Clinics. The children have all been saved the expense and loss of school time of a visit to Glasgow. I believe that with a wider knowledge of the scope of the Clinics, the work can be considerably expanded with a corresponding saving of travelling expense and loss of school attendance.

The occurrence of warts in school children is more than a cosmetic problem, as, being contageous, failure to treat the affected children allows of spread to others. There is still, however, no simple remedy for this common condition. Encouragement of parents to bring the children while warts are still few in number and therefore more easily treated, will, it is hoped, be of great value in combating spread.

Infantile eczema during the past year has on the whole been less severe, and the impression is that earlier resort to treatment is being practised.

No change in the disease pattern over the year has been noted. The co-operation received from the staff and from the patients has been most stimulating.

Details of the work will be found in the following table :---
