1958-1959 (Year ending 31st July, 1959)

To the Department of Health for Scotland and the County Council of the County of Dunbarton.

LADIES AND GENTLEMEN,

I beg to submit the Annual Report on the Medical Inspection and Treatment of School Children for the year ended 31st July, 1959.

I am, Ladies and Gentlemen,

Your obedient servant,

SAMUEL HARVEY,

Medical Officer of Health.

COUNTY HEALTH DEPARTMENT, 88 COLLEGE STREET, DUMBARTON.

# COUNTY COUNCIL OF DUNBARTON.

# SCHOOL MEDICAL STAFF.

Supervising School Medical Officer SAMUEL HARVEY, M.B., Ch.B., D.P.H., M.R.C.P.(Edin.).

School Medical Officers
IAIN MACLEOD, M.B., Ch.B., D.P.H.
CHARLES C. SLORACH, M.B., Ch.B., D.P.H. (part-time).
AGNES W. B. F. O'GORMAN, L.R.C.P., L.R.C.S.(Edin.),

# SANITARY CONDITIONS OF SCHOOLS.

The Property Committee, when making their annual inspection of schools and other properties in the spring of 1958, examined the lavatories, particularly at the older buildings, and expressed satisfaction with the manner in which these offices were being maintained and cleaned.

During the summer vacation all broken or defective sanitary fittings were replaced and the usual limewashing and painter work was carried out, where necessary, in all toilet apartments, heating chambers, playsheds, etc.

The major renovation of the girls' toilets at Dumbarton Academy was completed and the new playsheds and toilets at Dalmuir Secondary

School are almost finished and ready for use.

The Committee approved a very extensive programme of internal redecoration at schools throughout the county and a considerable amount of washing down work was done.

#### ORGANISATION AND ADMINISTRATION.

For Organisation and Administration, etc., and Co-operation with Public Health Department, Sections A, B, C, D, E and F, see pages 9 to 15 of the Annual Report, 1948-49.

## GENERAL REVIEW.

Routine inspection was carried out on 7532 children—a decrease of 461 from last year's total.

The number of children examined non-routinely, i.e., at clinics

mainly, was 1885.

Three thousand four hundred and twenty-five parents were present at the routine examinations.

## PHYSICAL CONDITION.

The percentage of children found to be free from all defects on routine school examination was 61.27, as against the previous session's figure of 61.5. The percentage of children free from defects in the different age groups was as follows:—

Entrants			 	 59.96
Second Age Group		***	 	 64.09
Third Age Group			 	 59.79
Fourth Age Group	***		 	 58.76

In Table I the number of children who were found to be requiring treatment (excluding uncleanliness and dental caries) and whose parents were so advised was 333, 96 less than last session.

77.82 per cent. of the children examined had already been

immunised against diphtheria.

# DEFECTS AND DISEASES.

Clothing.—During the session 2 children were found to have unsatisfactory clothing.

Footgear.—Two cases of unsatisfactory footgear were noted.

Uncleanliness.—The percentage of children found to be in a verminous condition of head and/or body shows no increase from 1957-58—3.1 per cent. 2.6 per cent. of girls examined were in this category as against 0.5 per cent. of the boys.

Skin Diseases.—Two cases of impetigo of the head were found, a

decrease from last year's total.

Nutrition.—Two children were noted as suffering from bad nutri-

tion. This is an increase of 1 from last year.

In the special eye examination of the 1951 age group, 89.3 per cent, had normal vision.

#### SCHOOL DENTAL SERVICE.

# ANNUAL REPORT, 1958-59.

The statistical record for the school session 1958-59 will be found

on page 19 under Table V.

A table under the heading "Additional Information" is shown on page 16 and gives some indication of the extent of treatment offered and carried out.

In February, one of the pioneers of the County's Dental Service, Miss E. McKendrick, L.D.S., retired, having completed 39 years of good service.

We were unable to fill this vacancy prior to the end of the session, thus the staff during the year was equivalent to the services of  $9\frac{1}{2}$  Dental Officers. The total establishment is 13 Dental Officers.

Of the 23,196 attendances made at the clinics for treatment, 3291 (16 per cent.) were made by expectant or nursing mothers and preschool children. It is apparent that the inroads of the Priority Classes into the School Dental Service are considerable.

Throughout the County, in varying degrees, school children, of their own volition, return at regular intervals (usually every six months) for a dental check up followed by treatment if necessary. Since they are not referred for treatment as the result of the Annual Routine Dental Inspection carried out in the schools, they are regarded as emergency cases. This gives rise to an inflated record of emergency patients and a false picture of the true conditions. Emergency patients are usually associated with toothache, whereas these patients are in the main seeking treatment for the conservation of their teeth and not for extractions for the relief of pain. The fact that some 5000 fillings were recorded under emergency patients is a true indication of this.

Advances in dental technique over the past 20 years have done much to diminish the dread of dental treatment, but nevertheless there still remains a reluctance on the part of many people to submit to conservation of the teeth by means of fillings. This is understandable, for the vibrations of the dental bur upon the tooth are not pleasant. Anything, therefore, which can remove this unpleasantness and so lead to greater conservation and less extraction of teeth is good dentistry. For this reason a Dentalair unit similar to that mentioned in my last Annual Report was installed in one of the clinics on a trial basis. This machine, unlike the conventional dental engine, has no pulleys or belt drive, but is motivated by compressed air, thus eliminating all vibrations. In addition, its high speed of operation reduces considerably the time taken for what was formerly regarded as the unpleasant phase of tooth conservation. We found that children who had experienced both types of dental machine, with a few exceptions, expressed a preference for the compressed air type.

Conservation of the permanent molars, especially the six-year-old molars (first permanent molars) occupies the major portion of a school dental officer's time, and I am of the opinion that it is in this field that such machines will play their greatest part in children's dentistry, and in so doing create a willingness to accept conservative dental

treatment in later life.

F. A. CASSIDY.

# DEPARTMENT OF SPEECH THERAPY AND SPEECH TRAINING.

# ANNUAL REPORT, 1958-59.

When, in February last, I joined the staff of Dunbarton County Council Education Committee to take charge of this department, I found the work in both therapy and training proceeding smoothly, and highly commended by all concerned. There is no doubt that the joining of the two into one department, with very close co-operation between them, should have beneficial results. If a scheme of Speech Training can be established in the early years of the Infants and Primary Schools, which will aim at training children in good habits of nasal and oral hygiene and correct beginnings of speech, the incidence of superficial dislalia (tongue disorders of articulation) should be reduced to some extent and relieve the waiting lists for therapy. The therapists would then be able to cope with a greater number of the more difficult and persisting organic and neurological defects, of which there are many requiring treatment. On the other hand, ideal facilities for the rehabilitation of the child who has had treatment are provided by the speech training classes and speech and drama projects within the schools. In these they would be given both opportunity and encouragement in the use of the newly-acquired skill, and in the gaining of confidence.

Unfortunately, the Speech Training staff has become much depleted and, at present, consists of only two full-time teachers, and myself teaching part-time. (At the end of June we part with Miss Fiona Peterkin, whose work was highly thought of in the schools, and she takes with her the good wishes of her colleagues.) It is the intention, however, to try to operate these schemes in as many of the schools as can be visited by the existing staff and such additional teachers as may be appointed. A similar department was set up in the city of Aberdeen some 17 years ago and has proved to be very beneficial indeed. The number of children in that city is comparable with those in this County, i.e., 30,000 approximately. When I visited it in March of this year the department consisted of 10 Speech Therapists and 12

Teachers of Speech Training and the Superintendent.

From Christmas onwards our department was short of two therapists, Miss Dallas and Miss Black, who left to take up appointments elsewhere. Two regional clinics were set up by me in February, one for the area of Dumbarton at Moss Cottage Educational Centre, and one at Kilbowie Primary School (where accommodation is provided) for the area of Clydebank. Cases most urgently in need of attention, medical referrals, post-operational, etc., were admitted, and an effort was made to make up in some measure for the loss of the service in 10 of the schools. A few more were seen and treated than was at first thought possible because of the fact that in the last term some of the final Diploma students from the Glasgow School of Speech Therapy had been admitted to our clinics for practical experience in clinical procedure, and assisted me for short periods each week. The practical examinations for four of these students were held in two of our clinics within the new schools of Linnvale and St. Eunan's. They were

chosen because of the very fine accommodation provided in them for this work. The examiners from London, Dr. Morley and Miss Ferrie, were much impressed and commented upon the pleasant rooms and excellent facilities which the Council have provided for the treatment of our children, and expressed a desire to see some of the others. (When we found ourselves in difficulty over accommodation in Helensburgh owing to the alterations in the schools there, the Director kindly sanctioned the use of two of the small rooms in Ardlui House. which will serve as a regional clinic for Clyde Street, St. Joseph's and Hermitage Schools. Cases are also admitted there from the outlying districts of Rhu and Kilcreggan.) We were fortunate in securing the services of two of the students who qualified, to fill the vacancies in our therapy staff at the beginning of the new session. It is with regret that we part with Miss Boyle, who did much good work on the therapy side. She resigned from our staff in June to take an appointment at the Hospital for Sick Children. We wish her every success in the work.

I would mention at this point that I had requests from the hospitals to deal with two adult patients. One woman resides in the outlying district of Twechar and has three small children in attendance at the school there. It was very difficult for her to attend at Stobhill Hospital for her post-operational treatment, and I was asked whether we had a therapist visiting in that area. The other was a lady from Helensburgh upon whom the surgeon decided not to operate, but advised her to have a course of speech therapy treatment. She has a pre-school child. I would suggest very earnestly that such adults be seen by our therapists (there would only be a few such cases each year) for two reasons: (a) we wish to establish close liaison with the hospitals so that our children may have the full benefit of access to specialists for medical examination and surgery when required; (b) our therapists will grow in stature in their profession, having experience in all types of speech disorders, and will be more likely to remain with our department for longer periods. They are inclined to go on to hospitals for this very experience. At present the shortage of qualified Speech Therapists is acute. In these circumstances, I have wondered whether the Committee might consider the appointment of married women as assistants on a strictly temporary basis.

The work has been carried out as formerly, cases being treated individually or in small groups according to their needs. Much valuable assistance is given in the schools by headmasters and their staffs. A special word of thanks is due to the headmasters of Linnvale and St. Eunan's for the extra help so willingly given during the Diploma examinations. Valuable guidance is also given to us by the Director of Education, by Dr. Anne H. McAllister, in her capacity as Honorary Consultant, and by Miss Calvert, Principal Psychologist. The County Medical Officer and entire medical and nursing staff co-operate to the fullest extent in making centres available and suitable for Speech Therapy treatment, and in giving advice when required. The results have been very satisfactory indeed, especially in regard to the preschool child. The numbers continued next session (see Table of statistics appended) would have been further reduced had the full

staff been operating. The numbers on List B (all examined, but awaiting treatment) are obtained from the survey, which was carried out some years ago, and has since been kept up to date. By courtesy of the Council, leave has been granted to one of the assistant therapists and myself to attend the International Conference on Speech Disorders

which will be held in London from 17th to 22nd August.

During the past session the following schools had the benefit of the teachers of Speech Training: Clydebank High School, Bearsden Primary, Goldenhill, Hartfield, Elgin Street, Milngavie, Whitecrook, Dalreoch, Knoxland, St. Eunan's, Kilbowie, Gavinburn, St. Patrick's R.C. Primary, St. Stephen's and Faifley Primary, making 15 schools in all. This work was commended by both headmasters and teachers. It has been requested by others who do not have it. Only one secondary school was visited. While it is of the utmost importance to have this service in the early years, until a great deal more of it can be done, it would be extremely beneficial for those who are leaving school and going out to their various careers. It is proposed, however, to continue in the schools which have had this service with the age groups not vet covered to establish some continuity in the work and thereby obtain the best results. Eleven schools only can be visited in the coming session by the existing staff, but as others are appointed they will be directed to those schools which have the greatest need of it.

In conclusion, I would thank the Director and staff for their very

warm welcome.

# N. M. MAXWELL,

Principal Therapist and in charge of the Department of Speech Therapy and Speech Training.

# SPECIAL SCHOOLS AND CLASSES.

## SPECIAL SCHOOLS.

Milton Special School.

This school caters for mentally handicapped pupils from the Western portion of the County. There are four classes at Milton School with a total roll of 85. There is also an Occupational Centre at Gavinburn with 53 pupils on the roll.

## SPECIAL CLASSES.

(a) For mentally handicapped children — Whitecrook School, C'yde-bank, with 17 on the roll (one class); Lairdsland School, Kirkintilloch, with 28 on the roll (two classes). Total number of pupils—45.

(b) For physically handicapped children-Hartfield School, Dumbarton,

with 20 on the roll (one class).

- (c) For conservation of vision—Whitecrook School, Clydebank, with 7 on the roll (one class); Hartfield School, Dumbarton, with 7 on the roll (one class). Total number of pupils—14.
- (d) For deaf-mute children—Hartfield School, Dumbarton, with 9 on the roll (one class).

### INSTITUTIONS.

# REMOVAL OF TONSILS AND/OR ADENOIDS.

During the year 576 children were operated on for the removal of Tonsils and/or Adenoids. There still remained at the end of the year 275 children awaiting examination.

This is an increase in the number of operations, 576 as against 539

last year.

# MEDICAL INSPECTION OF SPECIAL SCHOOLS.

During the present session 133 children, 62 boys and 71 girls, were examined. Of these, 86 were found to be mentally defective (educable) and 47 mentally defective (ineducable), while 10 had a congenital deformity. Clothing and footgear were satisfactory in all cases, 19 children were found to have a verminous condition of the head and/or body, and 14 children were found to have unhealthy mouths. 33 parents were present at the medical examinations and notices were issued to all parents whose children were found to be suffering from a particular defect.

## MILK-IN-SCHOOLS SCHEME.

The average number of pupils taking milk in schools during Session 1958-59 was 339,927 (approximately 86 per cent. of the roll).

# ARRANGEMENTS FOR PHYSICAL EDUCATION AND PERSONAL HYGIENE IN SCHOOL.

Details of physical education arrangements are as contained in the Report for 1948-49.

# ADMISSION OF CHILDREN TO APPROVED SCHOOLS.

During the year 23 children were committed by the Sheriff to Approved Schools.

# ULTRA VIOLET LIGHT TREATMENT.

Previous to the session 1930-31, the average age of the Third Age Group was 12 years. The number of children examined at the
average age of 13 years is, therefore, comparatively small.
