1 in 75 uninfected gay men
are likely to have HIV
in a years time.

This statistic is *not* inevitable. What you do when you have sex *can* make a difference. That's true whether you're HIV positive, HIV negative, or don't know your status. This figure is for London, the average for cities in England is 1 in 105 (information from the Public Health Laboratory Service). We just think you should know the facts.

To talk about what this means for you, call our National Helpline 020 7242 1010 (12 noon to 10pm daily), or book a Face 2 Face appointment by calling 020 7816 4566 during office hours on weekdays.
