**BE BOLD AND MIGHTY  
FORCES WILL COME TO  
YOUR AID-OR MIGHTY  
FORCES WILL COME AND  
KILL YOU**

An ominous personal aspect of this story has been the sudden and unexpected deaths of two of the key players. First, Dr. Strecker's brother, Ted Strecker, was found shot to death in his home in Springfield, Missouri, an apparent suicide, on August 11, 1988. Was Ted Strecker suicidal? Perhaps. In the past he suffered from depression and monumental frustration at the relative lack of interest in his findings. Dr. Strecker spoke with him the night before his death. Ted was cheerful, in good spirits, and looking forward to certain new developments that promised progress. The next day he was found dead, his 22-caliber rifle next to him. No note, no message, no goodbyes to anyone. Officially a suicide. Next, Illinois State Representative Douglas Huff of Chicago was found alone in his home, dead from an apparent overdose of cocaine and heroin, on September 22, 1988. Representative Huff did everything in his power to make the Illinois State Legislature and the people of Chicago aware of Dr. Strecker's work. He was very vocal, gave many press interviews, was constantly on television and radio urging people to wake up to the coverup concerning AIDS. Did Representative Huff use drugs? Perhaps. Was he an addict? No. Would he have known how dangerous

a massive overdose of cocaine and heroin was? Yes, of course. Cause of death: officially a stroke. Dr. Strecker has serious doubts that his brother killed himself. Representative Huff's associates doubt he died accidentally, and yet they are gone. Who's next?

**IGNORANCE IS BLISS,  
OR IS IT SUICIDE?**

We all know it is easier for a king to have a lie believed than a beggar to spread the truth. Well, we are spreading the truth about AIDS. Unfortunately, it isn't pretty. But the fact is you are not being told the truth by the government or the so-called AIDS experts. The media, for reasons of their own, will not present information contradicting the official propaganda. So you can choose to go along with the same people who gave us brain cancer (SV-40 virus) as a result of their contaminated polio vaccines in the early 1960's; a polio-like disease from their contaminated Swine Flu vaccine in the 1970's; and AIDS from their smallpox and hepatitis B vaccines; or, you can at least make yourself aware of the clear and present dangers that we all face by watching "The Strecker Memorandum." The cost of the tape is nominal, but we submit that remaining ignorant can cost infinitely more.

Thank you,

## IS AIDS MAN MADE? THE STRECKER MEMORANDUM

We have a story to tell you, a very strange story, one that affects you, me, and every other human being on earth. A story that must be taken seriously by the governments of every nation in the world because there may not be many humans left to govern by the turn of the century, or shortly thereafter. A story so bizarre, and so sinister that, if it were not for the fact that it is all true, it would make a great science fiction thriller. (Interestingly enough, Lorimar Pictures of Hollywood purchased the rights to Dr. Strecker's life story.)

The story begins in 1983 with Dr. Robert B. Strecker, M.D., Ph.D. Dr. Strecker practices internal medicine and gastroenterology in Los Angeles. He is a trained pathologist and holds a Ph.D. in pharmacology. Dr. Strecker and his brother, Ted, an attorney, were preparing a proposal for a health maintenance organization (HMO) for the Security Pacific Bank of California. They needed to know the long-term financial effects of inserting the treatment of AIDS patients. In as much as this information was not readily available in 1983, both brothers began researching the medical literature to learn what they could about this relatively new disease. The information they uncovered right from the beginning was so startling to them, so hard to believe, that it would dramatically alter both their lives and lead them on a five-year quest culminating with the creation of "The Strecker Memorandum," the most controversial video tape of our time and a remarkable set of documents called "The Bio-Attack Alert."

### WHAT THEY DISCOVERED

Right there in the medical literature for anyone to read for themselves was, basically, proof that the AIDS virus and pandemic was actually PREDICTED years ago by a world-famous virologist, among others. They found that top scientists writing in the BULLETIN of the World Health Organization were actually REQUESTING that AIDS-like viruses be created to study the effects on humans. In fact, the Streckers unearthed thousands of documents all supporting the man-made origin of AIDS.

Meanwhile, the government was telling everyone that a green monkey in Africa bit some native and started AIDS. As their research continued, it became obvious from the documentation that the virus itself was not only created as requested, but actually DEPLOYED, and now threatens the existence of mankind because it does what it was designed to do: cause cancer in humans via a contagious virus. Eventually, the Streckers came to realize everything the government, the so-called AIDS experts and media were telling the public was not only misleading, but out and out lies...The truth of the matter is:

- AIDS is a man-made disease;
- AIDS is not a homosexual disease;
- AIDS is not a venereal disease;
- AIDS can be carried by mosquitoes;
- Condoms will not prevent AIDS;
- There are at least six different AIDS viruses loose in the world;
- And on and on, but...

### THE SCARIEST PART

The most dreaded fear that all oncologists (cancer doctors), virologists, and immunologists live with is that some day CANCER, in one form or another, will become a contagious disease, transferable from one person to another. AIDS has now made that fear a reality. If you think you are safe because you are not gay or promiscuous, or because you are not sexually active, then you must watch "The Strecker Memorandum" very carefully.

### IF YOU PLAN TO HAVE SEX TONIGHT YOU HAD BETTER READ THIS

The most common misconception being foisted upon us right now concerns sexually active Americans. We are told that if a man uses a condom, the transference of the deadly virus is virtually eliminated. Nothing is further from the truth. Of all

the body fluids that the AIDS virus is found in, semen contains the least. As a matter of fact, in every single study ever published on the subject, no one has found a significant amount in anyone's semen. It just isn't there in huge numbers. There is usually about one virus per milliliter, a statistically irrelevant amount. One copious ejaculation might produce only two or three viruses. This is substantiated in the medical literature. But, just for argument's sake, let's say all the medical studies are wrong. Let's pretend that there are countless millions of AIDS viruses in the ejaculation. Are you aware that condoms are riddled with microscopic or larger holes? Studies show that even the smallest holes found in condoms are two to ten times larger than the AIDS virus. It's like shooting a golf ball through a basketball hoop. Condoms have not, will not, and cannot prevent AIDS.

### **THOUSANDS ARE ALREADY DEAD**

Over one hundred thousand Americans have already died because they didn't know the truth about AIDS. Approximately 23 million Americans are already infected. More than one in 60 babies born in New York City is infected; three in 100 college students in America is infected; one in 20 aliens applying for amnesty is infected, including men, women and children. These are just some of the facts you are not likely to hear about from the media.

### **WHY A VIDEO TAPE?**

One of the first things the Strecker did was to try and tell their medical and legal colleagues what they were finding in the literature. Some were interested; most were not. Certainly no one was prepared to risk their professional standing by making waves within the establishment. Ted Strecker compiled some of the most damaging documents into a report he called "The Bio-Attack Alert" and sent it to every Governor of every state, the President, the Vice-president (George Bush), the FBI, the CIA, the NSA, and selected members of Congress. He got a grand total of three replies from three governors; nothing from the government. Both he and Dr. Strecker were laughed at and ridiculed at every turn. As an example, Dr. Strecker told the government in 1985 that virtually every person testing positive for AIDS would die prematurely and

painfully. The government said that was nonsense. Their figures showed that maybe ten percent at most would die from the disease. In 1986, the government said maybe 50 percent of those infected would die, in 1987, they said maybe 75 percent, in 1988 they finally agreed with Dr. Strecker that AIDS is virtually 100 percent fatal. We could go on with facts Dr. Strecker unearthed that the "experts" said were wrong and now accepted as the truth. Dr. Strecker, like a good scientist, submitted paper after paper with his findings to all the prestigious medical journals in America. They were refused. He then tried to have his findings published in Europe. Again, closed doors. What to do? Dr. Strecker did not feel he could take the time from his practice and his research to write a book. On the other hand, everyone has a TV and now most households have a video cassette recorder (VCR). The time involved to make a video is nothing compared to writing a book, and so the video "The Strecker Memorandum" was created. It is 96 minutes of the most startling, controversial, and information-packed video you will ever see. It disputes virtually everything the American public is being told by the government, that so-called AIDS experts and the media. In fact, after seeing it YOU will know more about AIDS than 99 percent of all doctors in America.

### **MUSIC IS NOTHING IF THE AUDIENCE IS DEAF**

With the video made, it seemed a simple matter to advertise it and the world would now become aware of what it was facing, right? WRONG! The fact that you are even reading about "The Strecker Memorandum" now is a minor miracle by itself, in as much as TV stations have refused to advertise it. TV and radio time brokers that sell blocks of commercial time have refused to sell us time. TV station managers have refused to even air programs containing interviews with Dr. Strecker. A national radio network did an interview with a famous talk show host and Dr. Strecker and then refused to run it. Virtually every big name network television magazine show and all the syndicated TV interviewers and talk show hosts have said NO to Dr. Strecker. Big city newspapers will not take any print ads telling about it, and so it goes...WHY? What is in "The Strecker Memorandum" that sends a cold chill down the spine of most media executives?

### **WHY IS EVERYONE AFRAID OF "THE STRECKER MEMORANDUM"?**

The excuse we hear over and over is that it is too controversial. TOO CONTROVERSIAL? They say that this information, if widely disseminated, will cause the public to panic. If someone had poisoned your water supply and you and your family could die, wouldn't you want to know about it? Would you panic? Or would you more likely be outraged and try to find out who did it and punish them? We feel the only persons who might panic are those scientists who willingly or otherwise created AIDS and are now promoting misinformation by covering it up. After all, if you made AIDS would you tell anyone about it?

### **THINK OF YOUR FAMILY AND FRIENDS...NOW THINK OF THEM DEAD**

It may take a while before the words "species threatening" sink in, because the term has rarely been used before to describe an existing human condition, but once you realize the implications of that term, and realize that, unlike any other kind of disease ever known to man, past or present, AIDS can, if unchecked, kill every human on earth, then your outlook and attitude regarding everything in life must change. Whether you like it or not, and despite all your precautions, the time will come when you will test positive for AIDS, and it can happen much quicker than you realize.

### **IT'S OUT THERE**

The number of AIDS-infected people is doubling approximately every 12 months, and in some areas even sooner. With 23 million Americans carrying the virus, you don't have to be a rocket scientist to see how long we have here in the U.S. Africa has, conservatively, 75 million infected; some estimates double that. Brazil as a country is in serious jeopardy because all through the 1970's they were buying their blood supply from Africa. On top of that, the World Health Organization conducted a large scale small pox vaccination program there in the

1970's (for the full implications of that see "The Strecker Memorandum"). Southern Japan has at least 30 percent infected with HTLV I, the leukemia-causing virus (although you will never hear about that on TV). Russia is now reporting AIDS as a problem. Cuba has already set up concentration camps for the AIDS-infected and they are full (you won't see that on TV either). Haiti, of course, is ravaged by AIDS; more than 20 percent of the people are infected and getting worse every day. And so it goes. Virtually every nation on earth with few exceptions (Iran is one) is reporting a growing problem. It's on every continent, every sub-continent, and every island chain, Atlantic and Pacific. So why won't the media or government tell you these things? Is it too controversial for you to handle? Are you going to panic?

### **IS THERE ANY HOPE?**

Yes and no. NO, if you are waiting for the government to create a magic bullet. As you will see in "The Strecker Memorandum," part of the problem is that all the various AIDS viruses are recombinant retroviruses. Very simply, that means they have the ability to recombine with the genes of any cell they enter and the offspring or new viruses they form are different from the parent viruses. HTLV III alone (that's the most common American AIDS virus) has the mathematical ability to change itself 4 to the 9,000th power. The common cold recombines much less frequently and we haven't found a cure for it after a hundred years. Besides, does it make much sense to entrust the cure for AIDS to the same people that may have created it? YES, there is hope if Dr. Strecker and a growing number of realistic scientists are correct in looking at alternative, non-allopathic, non-drug modalities based on Raman spectroscopy. In fact, much research is going on now that offers great promise. Unfortunately, our government takes a dim view of any type of treatment for any type of disease—let alone AIDS— that does not conform to its rigid rules for acceptance, registration and legalization. Of course the FDA would definitely like to see an allopathic drug treatment or cure presented by an ethical drug company or university. Well, we don't think that's going to happen. Because of this attitude, much experimentation in America must go underground, underfunded, or out of the country entirely. Again, this is explained further in "The Strecker Memorandum."
