Dr. Virginia Beridge  
Department of Public Health  
Keppel St. Tropical Medicine  
London, UK

Dear Dr. Beridge:

MicroGeneSys is pleased to announce the immediate availability of its purified recombinant HIV-1 proteins and specific antisera for non-commercial research use. These high quality, standardized reagents are now being offered in response to numerous requests from the scientific community.

MicroGeneSys is a world leader in the expression and purification of HIV-1 proteins. The proteins are derived from an insect cell expression system that produces large complex proteins such as the HIV-1 envelope glycoproteins.

These materials are available only to scientists in universities, research institutes and other non-profit institutions. We will promptly supply you with the reagents needed for your research upon receipt of your order and the completed Investigator's Research Statement.

Descriptions of our research products, pricing information, and the Investigator's Research Statement form are provided in the enclosed package. If you need additional information, please contact our Technical Service representatives. Should you anticipate multi-milligram annual usage, we invite you to inquire about our Research Collaborative Program.

We look forward to working with you and hope that our materials will help to advance your AIDS research efforts.

Sincerely,  
MicroGeneSys, Inc.

Franklin Volvovitz  
Chairman and President
