If you have HIV,
treatments can
prolong life
and
improve
your health

HIV treatments can:

- *help you live longer and feel better*
- *attack HIV in your body*
- *lessen the chance of passing HIV from a pregnant woman to her baby*

HIV treatments will not:

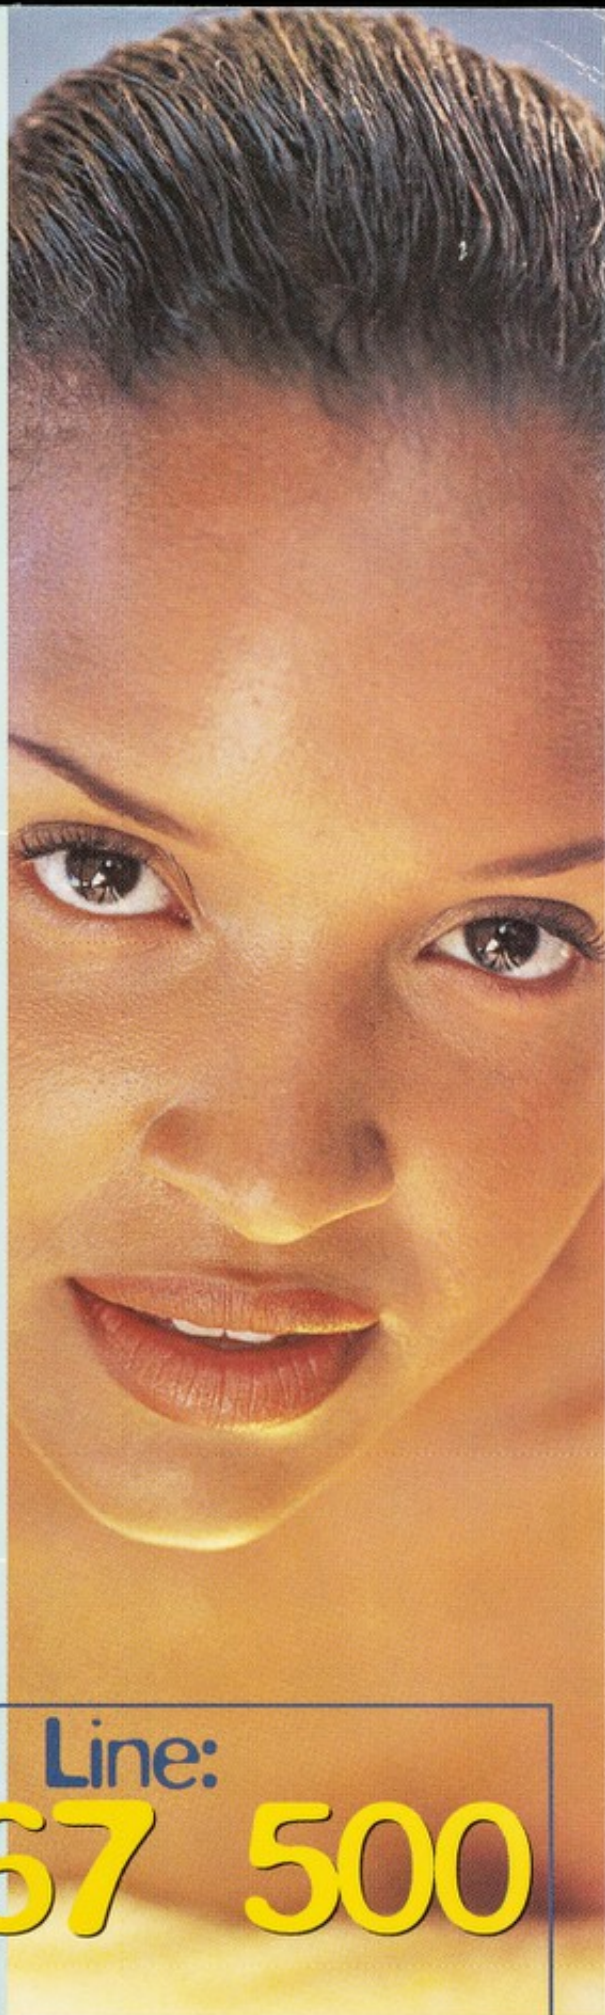

- *cure you*
- *stop you from being able to pass HIV on to other people*

For best results, HIV treatments must be taken correctly

If you want to know more about the basic facts of HIV, there is a free, confidential phone line for African people:
