'Tineafax'
*for prevention
and treatment of*
athlete's foot

'Tineafax'

OINTMENT

for treatment

'Tineafax' Ointment contains potent but bland antifungal agents in a special penetrating base. It is noteworthy for its

- * ability to reach deep-seated mycelia
- * ability to destroy fungi without irritation to the patient
- * effectiveness over a wide pH range
- * effectiveness against tinea cruris ("dhobie itch") as well as tinea pedis ("athlete's foot").

Method of Application Treatment is simple. It consists of washing the affected parts, removing dead, loose skin, and then applying the ointment. An application night and morning for 7 to 21 days will clear infection in the majority of cases.

Formula 'Tineafax' Ointment contains:

Antifungal and antibacterial agents	Zinc undecylenate	8 per cent
	Zinc naphthenate	8 per cent
	Terpineol	2.5 per cent
	Chlorocresol	0.1 per cent
Penetrating agents	Mesulphen	8 per cent
	Methyl salicylate	2.5 per cent

Packing 'Tineafax' brand Compound Undecylenate Ointment is issued in tubes of 1 oz. and jars of 1 lb.

'Tineafax'

POWDER

Regular dusting of hosiery, footwear and feet with 'Tineafax' Powder is a wise precaution. The zinc undecylenate in this dusting powder effectively inhibits the growth of the persistent fungus which causes "athlete's foot". 'Tineafax' Powder should also be dusted on the clothes and skin of anyone who has had, or may be exposed to, ringworm of the body.

Undecylenic Acid Undecylenic acid is closely allied to the normal constituents of sweat. It does not irritate or break down the skin in the manner of many fungicides, and therefore may be used continuously for prophylactic purposes. 'Tineafax' Powder contains 10 per cent of zinc undecylenate.

Method of Application 'Tineafax' Powder may be dusted or sprayed—its special plastic container is designed for either purpose—into hosiery and shoes as well as over the feet.

Packing 'Tineafax' brand Undecylenate Powder is issued in screw-capped plastic containers of 25 gm.
