TRADE MARK **WELLCOME' BRAND CHLOROFORM**

WHEN chloroform is the anæsthetic of choice, 'WELLCOME' BRAND CHLOROFORM should always be employed.

It is a product of exceptional purity, uniform composition and unvarying reliability, conforming to the requirements of the 1914 British Pharmacopœia.

Chloroforms are liable to contain impurities such as chlorine, hydrochloric acid, carbonyl chloride (phosgene), and various empyreumatic substances which irritate the respiratory tract and frequently

cause dangerous cardiac depression. Such chloroforms have actually been placed on the market in several countries, and prosecution, with confiscation of large quantities, has followed, especially in the U.S.A.

'WELLCOME' BRAND CHLOROFORM is manufactured from materials of exceptional purity and by processes which have been proved by research and experience to be satisfactory. It is free from all objectionable constituents.

Many chloroforms, notwithstanding careful preparation and purification, yield very variable results. Clinical experience shows that remarkable uniformity of action

is attained when the chloroform contains a certain minute amount of ethyl chloride. 'Wellcome' Brand Chloroform is particularly characterised by containing precisely that small, definite proportion of ethyl chloride which is so beneficial in the induction of chloroform anæsthesia.

'Wellcome' Brand
Chloroform, in $\frac{1}{4}$ lb
bottle
Height of bottle : 5 in.

The word 'WELLCOME' is a trade mark or brand

'WELLCOME' BRAND CHLOROFORM

In Convenient, Hermetically-Sealed Tubes

Made of amber-coloured glass, these hermetically-sealed tubes are so constructed that the elongated portion can be fractured with ease and certainty.

30 c.c. hermetically-sealed tube

Length of tube: $5\frac{1}{2}$ in.

The orifice may be closed effectively by embedding the point in a cork. Additional convenience has been secured by providing the tubes with a flat base on which they stand upright. This method of packing

Convenient
and
effective

'Wellcome' Brand Chloroform is ideal when chloroform has to be stored for some time, particularly in warm countries.

It prevents evaporation, ensures the supply of the precise quantity required, and prevents contamination of the anæsthetic. It forms, also, the ideal method of packing for the hand-bag of the surgeon, obstetrician, or gynæcologist.

'Wellcome' Brand Chloroform is issued in 30 c.c., 60 c.c. and $\frac{1}{4}$ lb. amber-coloured, hermetically-sealed glass tubes, as illustrated. Also in 2 oz., $\frac{1}{4}$ lb., $\frac{1}{2}$ lb., 1 lb., 100 gm., 500 gm. and 1000 gm. stoppered bottles, as illustrated, page 1
