for debilitated and wasting patients  
whether young or old

when a sulphonamide is needed for children...

how  
much  
is  
one  
teaspoonful?

Teaspoons can vary in capacity from 3 c.c. to 7 c.c. Thus, the amount of a sulphonamide administered may be as much as 50% more or less than the intended dose. With a long-acting sulphonamide, it is imperative that the child receives the exact, appropriate dose. The 'Madribon' squeeze bottle has been specially designed to deliver accurate measured doses with ease.
