## Otrivine compared with ephedrine

Mean values for 20 patients with acute rhinitis

### Prolonged relief from nasal congestion with Otrivine.

In a recent trial\* the decongestant effects of Otrivine and ephedrine were compared, by measurement of nasal air flow in patients with acute rhinitis. From the diagram it can be seen that while both Otrivine (1 : 1000) and ephedrine (1 : 100) have a rapid decongestant effect, the duration of action of Otrivine is some three times greater than that of ephedrine.
