## 24-Hour Control of Bronchospasm

Dear Sir,

The alleviation of childhood asthma often presents the general physician with an emergency situation, rendered more stressful by parents' anxiety about their child's dyspnoeic attacks.

An increasing number of physicians use Etophylate Syrup as a reliable, safe and acceptable way of controlling bronchospasm in children. An increasing number, too, find that the use of Etophylate Pædiatric Suppositories (100 mg.) at children's bedtime provides the child with night long relief from bronchospasm and reduces the need for emergency calls from anxious parents. Etophylate Pædiatric Suppositories are rapidly absorbed; they act quickly and, like all Etophylate products, are safe and reliable in action.

Etophylate Syrup by day, supplemented with Etophylate Pædiatric Suppositories at night time, provide 24 hour control of bronchospasm in children aged 3 months or more.

Samples of Etophylate Syrup and Etophylate Pædiatric Suppositories may be obtained from our Representative, or by request to our Medical Service Department.

Yours faithfully,

DELANDALE LABORATORIES LIMITED
