## DATA SHEET

# Exterol

### Presentation

Viscous solution containing 5.0% w/w Urea hydrogen peroxide.

### Uses

An aid in the removal of hardened ear wax.

### Directions

Remove the protective cap, invert the pipette above the opening of the affected ear and, with the head tilted sideways, gently squeeze 5-10 drops into the ear. Retain drops in ear for several minutes by keeping head tilted or, alternatively, by gently inserting a small plug of cotton wool into the outer ear.

Repeat once or twice daily for at least 3-4 days or as directed by the physician.

### Contra-indications, warnings, etc.

Keep away from the eyes. Do not use if eardrum is known or suspected to be perforated. Stop usage if irritation or pain occurs.

### Pharmaceutical precautions

Store in a cool place. After use, always replace cap and return bottle to carton.

### Legal category

**P**

### Package quantity

Exterol is presented in a 12ml amber glass bottle, incorporating a specially designed pipette enclosed in a protective cap.

### Further information

After insertion of the drops into the ear, the urea hydrogen peroxide liberates oxygen which acts to break up the hardened wax.

Subsequently, the glycerin and urea assist in the softening of the wax in order that it may more easily be removed from the ear, either with or without syringing. Due to the release of oxygen, patients may experience a mild, temporary effervescence in the ear.
