*Effective Therapy For the Relief
of Menopausal Symptoms*

RELATIVELY small doses of Diethylstilbestrol, Lilly, whether given parenterally or orally, can produce the desired result in the control of menopausal symptoms. Excessively large doses of either natural or synthetic estrogenic preparations may cause nausea. A cautious approach in establishing a maintenance dose will prevent untoward reactions. Cyclic administration of Diethylstilbestrol, Lilly, results in an effect which simulates the progression of estrogen levels occurring in normal ovarian cycles.

The dosage forms of Diethylstilbestrol, Lilly, include tablets, ampoules, and vaginal suppositories. They are readily available at your local retail pharmacy.

Lilly in Switzerland

OF ALL of the admirable qualities of the Swiss people, unselfish, humanitarian service is characteristic. It was a Swiss, Jean Henri Dunant, who founded the Red Cross. The executive committee, known as the International Red Cross Committee, is made up entirely of Swiss citizens. Similar organizations doing private relief work for unfortunates all over the world have their headquarters in Switzerland and are staunchly supported by the Swiss people.

Although Lilly products had been sold in Switzerland for many years, it was not until 1947 that the first Lilly representative was appointed. Those engaged in medical research are

now contacted regularly. It is hoped that Eli Lilly and Company will be accorded the privilege of co-operating in the development of discoveries certain to come from the laboratories of Swiss scientists. To make available to all the findings of the world's best medical talent is the goal of Eli Lilly and Company.
