INTERNATIONAL
HEALTH EXHIBITION.

South Gallery, Stand No. 217.

G. + FLEMING,

MANUFACTURER OF THE

Patent Air-tight & Lock

CORKS

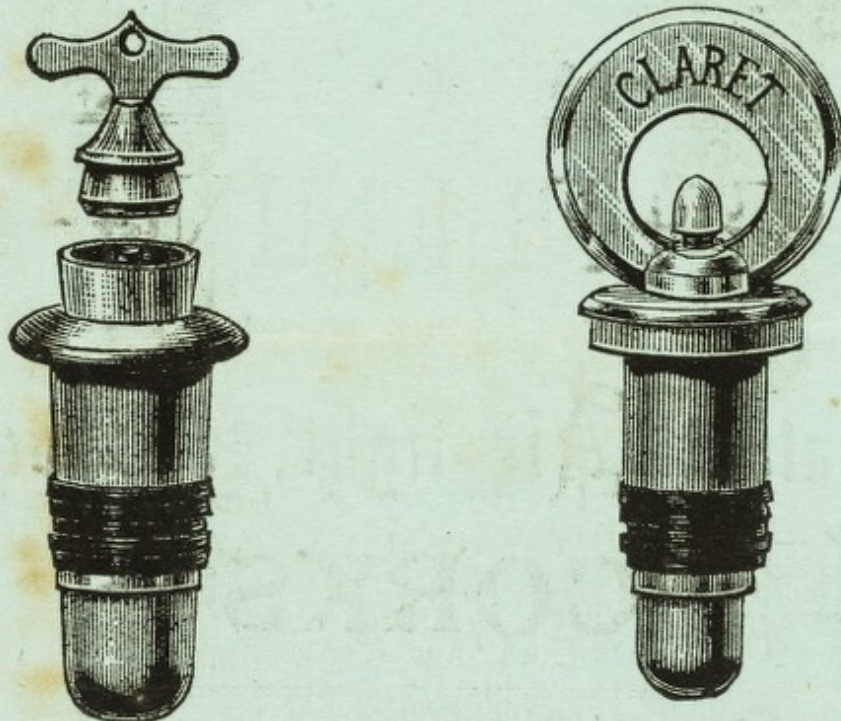

WHOLESALE DEPOT;

128, STRAND, LONDON, W.C.

Fleming's Patent Air-tight & Lock Corks

Which cannot be extracted without the Key.

These Corks are perfectly Air-tight, and Everlasting, fitting any bottle, which can be safely locked and kept perfectly air-tight. They will keep Champagne, or any Sparkling Liquor, or Aerated Water, fresh for any length of time after a portion of the contents of a bottle has been removed. For Medicine, Chemical or *Poison* Bottles they are of immense importance, as by their use all possibility of accident through carelessness or mistake (*by which many valuable lives have been sacrificed*) would be obviated.

Fleming's Patent Air-tight Corks.

SAMPLE SENT BY POST TWO STAMPS EXTRA.

TO BE HAD AT MOST CUTLERS, SILVER-
SMITHS, BRUSH MAKERS, ETC., ETC.

OPINIONS OF THE PRESS.

Mr. G. FLEMING, 128, Strand, has a very interesting exhibit of air-tight and lock corks, which are so perfectly close-fitting to any bottle for which they are used that champagne or aerated waters having been once opened can be so effectually re-closed as to keep for weeks, if necessary, without their strength or purity being in the least degree impaired. Moreover, the liquor cannot be extracted without the key, so that the dishonestly-inclined person is completely frustrated in his designs. He must break the bottle to taste its contents. We quite agree with a contemporary who describes it as "one of the best inventions ever brought before the public.—*The Licensed Victuallers' Guardian.*

Everybody, not even excepting the confirmed teetotaler, probably at times feels the want of a really serviceable bottle stopper, which should have the advantages of the ordinary cork without its drawbacks, and the elegance of the decanter stopper without causing inconvenience by occasionally becoming a fixture. Mr. G. Fleming, of 128, Strand, London, has invented an article which appears to meet the case. The corks or stoppers he manufactures are made of wood and india-rubber, and by turning a screw in the head of the stopper the indiarubber collar is pressed outward against the bottle neck, and forms a perfectly air-tight and irremovable stopper. Some of the corks are also made in such a manner that they can be tightened with a small key, and the safety of the contents of a bottle is thus insured. The heads of the stoppers are made in various forms, and some are labelled with the names of the beverages to which, in a double sense, they afford protection.—*Railway Supplies Journal.*
