BLOTTER

Open season
for **FUNGUS SKIN INFECTIONS**

"Athlete's foot", "Swimmer's Itch", "Dhobie Itch" . . . these descriptive names return forcibly to the vocabulary at this time of year. Increased facilities for communal exercise bring increased prevalence of fungoid skin infections, together with the problem of how best the individual case can be relieved and threatened outbreaks averted.

Mersagel is designed specifically to deal with this problem. It incorporates the powerful fungicide, phenyl mercuric acetate, in a special water-soluble jelly base. Mersagel acts directly and rapidly upon infecting fungi yet is non-irritant to the normal skin; it also protects contacts and prevents recurrence of infection. Mersagel is colourless, clean to use, and conveniently applied direct from the tube or jar.
