NEOBACRIN OINTMENT

the antibiotic ointment in everyday
prescription demand

because

it can be used time and time again

Neobacrin Ointment, containing neomycin and bacitracin, is one of the most effective antibiotic preparations available for treating bacterial infections of the skin and eye; yet it's safe, with minimal sensitisation risk, and resistance does *not* tend to develop. It is supplied in tubes of 15 gram and (with ophthalmic nozzle) 3½ gram, costing you respectively 6/- and 2/4. Neobacrin is a Glaxo trade mark.
