PREFACE

THE following Catalogue is intended primarily for the use of the medical profession, and the prices quoted are strictly wholesale. The aim throughout has been to afford an easy means of reference to all instruments and apparatus in general use, at the same time bringing to the notice of the practitioner all the more modern appliances designed for use both in general surgery and in its special branches.

With this object in view it has been thought possible, without in any way detracting from the thoroughly up-to-date character of the work, to omit from it illustrations of many instruments and appliances of obsolete pattern or doubtful utility. Thus limited as to subject matter, the Catalogue assumes but moderate proportions, and will, it is believed, be found correspondingly useful and easy of reference.

0129	Medullary Spikes for use without Clamp..	0	1	0

INSTRUCTIONS FOR USE.

The jaws grasp the bone on either side of the fracture, and are placed, one superficially, the other deeply. They are joined by a tension-screw of fine steel, which pierces the pivots and passes directly through the line of fracture, to the obliquity of which it accommodates itself accurately. The tension wire, some three or four inches long, is finely threaded and provided with a minute nut, which can be screwed down, thus clamping the jaws firmly home to any required position, after which any surplus is filed off and discarded.

0535

0535'

0535	"Securitas," Maw's (Reg. No. 495414)	0	5	0
------	--	---	---	---

This tourniquet consists of two metal hooks, working by a hinge movement on a short metal tube, and a piece of thick walled rubber tubing. When in use both ends of the india-rubber tubing are on the stretch and there is therefore equal tension throughout. The india-rubber constricting band being made in a tubular form, becomes flattened when in use and does not, therefore, cut into the skin as does a solid cord.

Needle box, German silver.	Do. 2 oz., in metal cases (2).	Sponge Bag.

EXTRACT FROM "LANCET," JULY 4th, 1903.—The surgical bag, as shown in the accompanying illustration, I designed with the view of being able to go out at short notice to do any operation in private in a thoroughly aseptic and antiseptic manner. The frame is strongly made, and covered with closely-woven strong brown canvas lined with "selvyt." The dimensions are 30 in. by 20 in. by 9 in. The contents are as follows:—1. An instrument steriliser of the ordinary pattern except that I have designed the lid with a flange, under which a ring of thick, round, solid india-rubber fits tightly, half its circumference lying in a groove. This lid is also fitted with clasps by which it is clamped down on to the body of the steriliser, which is thus rendered water-tight by the pressure on the rubber. 2. An oblong but deeper receptacle, fitted with folding legs and a similar lid, in the bottom of which lies a nest of five bowls of nickel-plated tin. These are utilized as bowls for lotions, etc. The lids of both boilers are designed also for instrument trays. All sponges, bowls, towels, ligatures, instruments, and instrument-trays can thus be readily sterilised. 3. A receptacle for dressings, bandages, aprons, etc. The dressings I use are those supplied by Messrs. Maw, Son & Sons, of 7, Aldersgate Street, London, E.C., sterilised dry and packed in waxed paper. The lid of this vessel can also be used as an instrument tray. Great trouble has been taken in the manufacture of this bag by Messrs. Maw, Son & Sons, and I can only say that the workmanship and finish are most excellent, and that the whole design has been carried out entirely to my satisfaction.

BRIGHTON.

ARTHUR H. BUCK, F.R.C.S. Edin.,
Surgeon to the Sussex County Hospital, etc.

02173

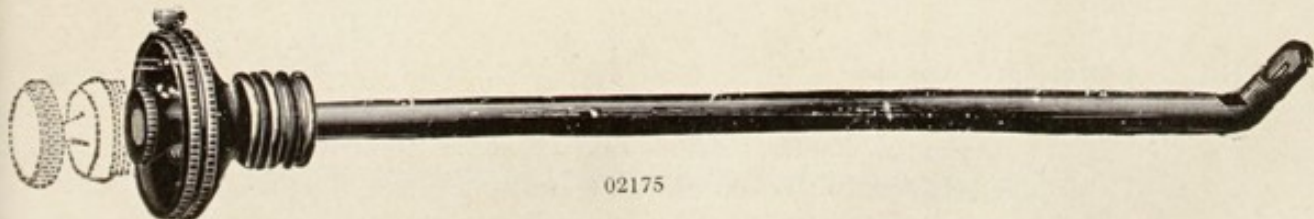

02173	Catheter Scoop, Strauss's, in aseptic metal case ..	2	0	0
-------	---	---	---	---

This instrument consists of a metal catheter (a) fitted with blunt pilot (b), a sharp spoon (c), a ring curette (d), and a handle (e). The catheter (a) with its blunt pilot (b, b), is first inserted into the bladder, the pilot is then withdrawn, leaving the catheter in position, and either the spoon (c) or curette (d) is inserted in its place. The same handle (e) fits either the spoon or curette.

02174

02174	Catheter Washer, Corner's, to fit any tap ..	0	1	6
-------	--	---	---	---

02175

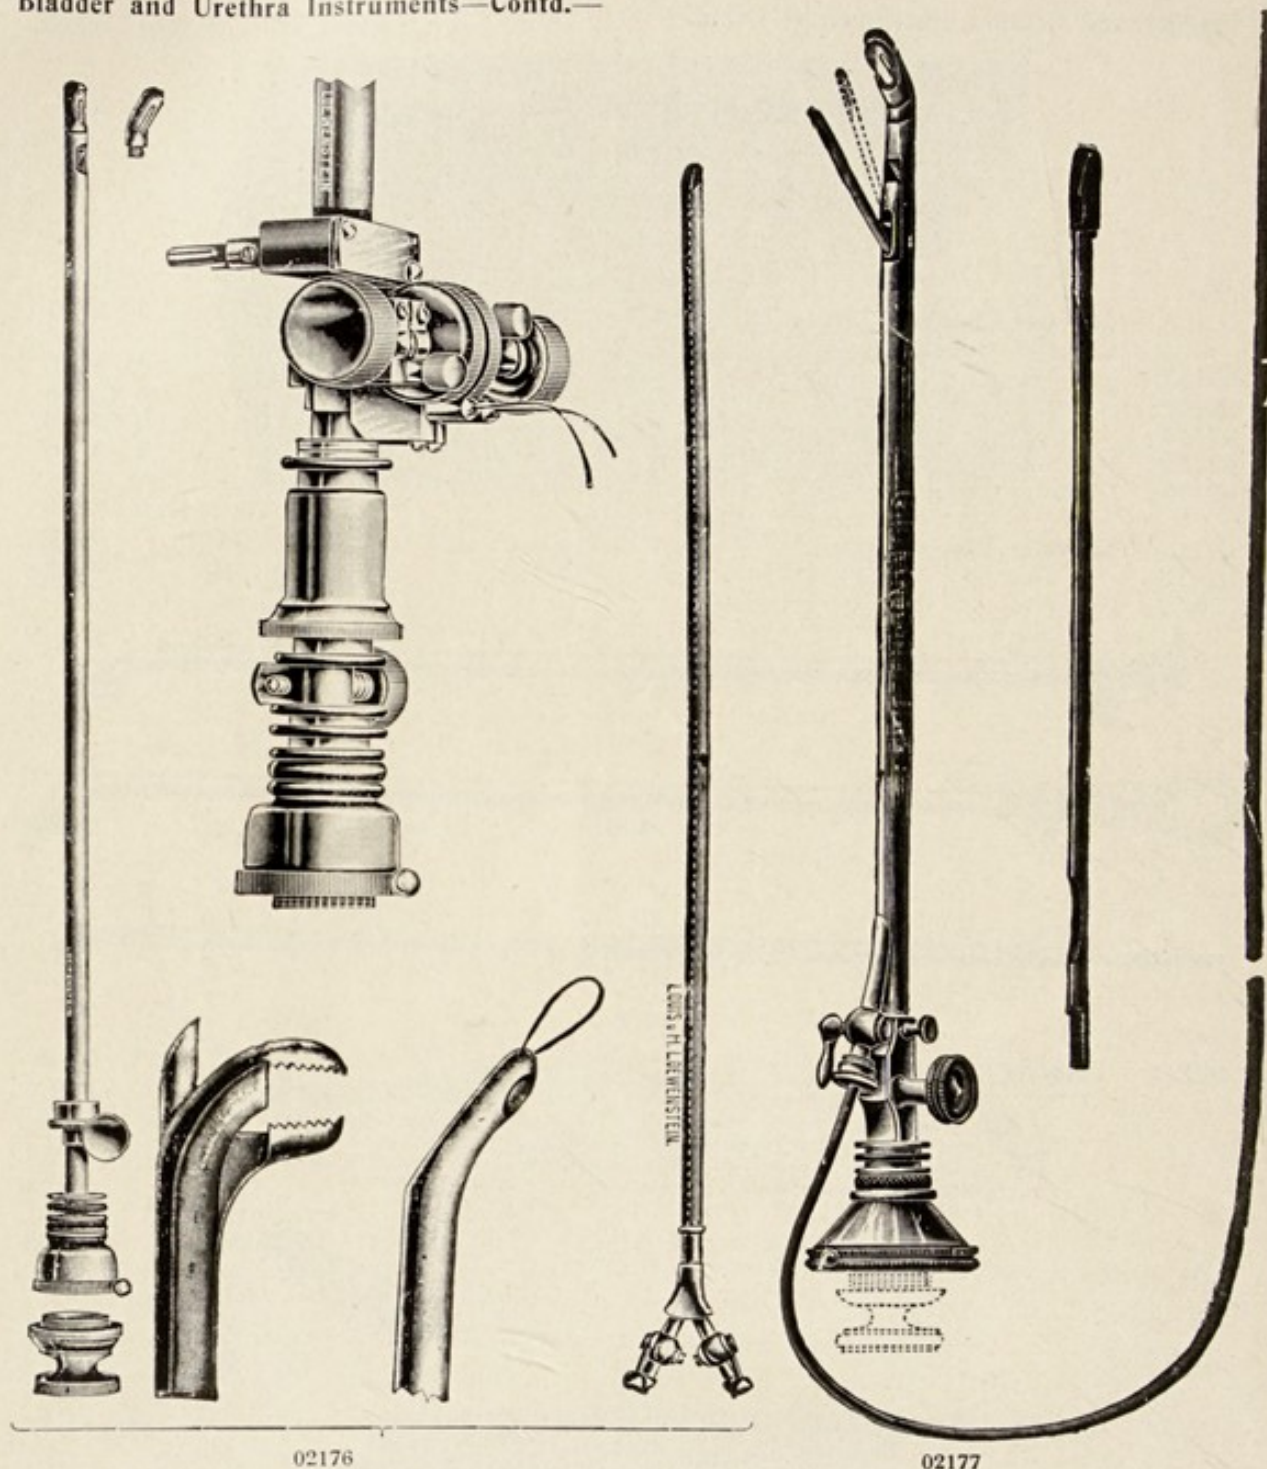

Cystoscopes—

02175	Nitze's, for examination of the interior of the bladder, with cords and spare lamp, in case ..	4	0	0
-------	--	---	---	---

This instrument requires about 6 volts and 1.3 amperes.
The usual diameter of a cystoscope is No. 21 (French gauge), but they can be supplied as small as No. 18 or No. 15 if required, but with the smaller sizes the view obtained is more limited.

02275	Tubes each	0	2	0
02276	Herring's Apparatus (registered), as No. 02267, but arranged to take funnel-ended catheters.	1	10	0

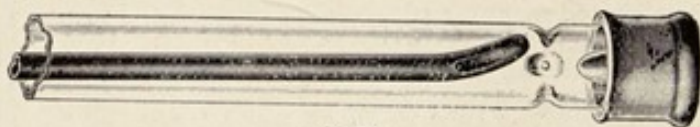

* A full description of the apparatus will be found in Herring's "Sterilisation of Urethral Instruments."

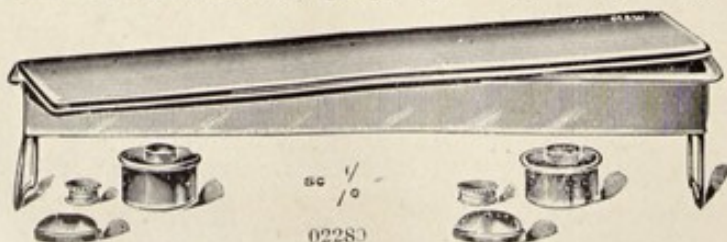

Apparatus for the Sterilisation of Elastic Gum Catheters—Contd.—

- No. 02277 For Sterilisation by Boiling—Contd.—
Herring's Apparatus,* for hospital use, to sterilise several catheters at a time, consisting of a cylindrical kettle with separate inner frame for holding 12 glass tubes, metal box for 24 india-rubber plugs, and spirit lamp with holder,
tin, 13/6; nickel-plated 1 7 0
The above can be supplied without the inner frame at a reduction of—tin, 3/-; nickel-plated, 3/6.
A small quantity of liquid paraffin is poured into each tube before boiling.
- No. 02278 Herring's Apparatus,* for Curved Metal Sounds, consisting of cylindrical kettle with separate inner cylinder and lamp,
tin, 16/6; nickel-plated 2 1 0
By the above systems the instruments are both sterilised by boiling, and at the same time lubricated with a sterile lubricant (Paraffin Liquidum B.P.).

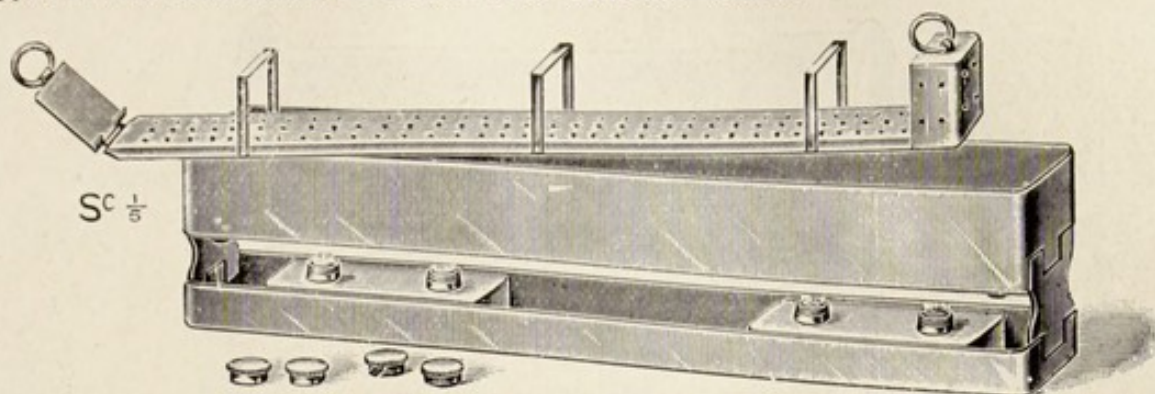

- No. 02279 Glass Tubes, for use with the apparatus, No. 02277, with constriction at one end to prevent catheter from slipping through, and two india-rubber plugs each 0 1 0

- No. 02280 Steriliser, nickel-plated, 16 in. by 2½ in. by 1½ in., with folding legs and 2 lamps, in brown canvas case 1 0 0
* A full description of the apparatus will be found in Herring's "Sterilisation of Urethral Instruments."

A detailed black and white illustration of a pair of surgical forceps, specifically a Mammotome. The forceps have long, curved handles with serrated edges. The brand name 'MAW' is inscribed on the upper handle. The tips of the forceps are joined by a hinge mechanism, and a small, cross-shaped handle is attached to the lower part of the instrument. The illustration is set against a plain background.

A detailed black and white illustration of a pair of surgical forceps, specifically a Babcock forceps. The instrument features long, slender jaws with serrated edges for gripping. The handles are long and straight, with a ratcheted mechanism at the base to maintain tension. A small label 'Sc 1/2' is positioned near the joint, and the number '02391' is printed at the bottom center of the image.

02568	Macnamara's " Forceps-Applicator "	0	11	6

As will be seen from the illustration, one of the blades is a plain conical probe, with the usual uterine curve, and is accurately received into the second blade, which is concave, and about 3 mm. longer than its fellow, terminating in a blunt end. When tightly closed the instrument is not much thicker than an ordinary Playfair's Probe, and when a piece of cotton wool is grasped between the blades and firmly wound round both, there is no danger of leaving it in utero, and very little difficulty in subsequently removing it, on gently dilating the blades.

	Dental Engine, Parson Shaw's—			
	The characteristic feature of this particular engine is that it has a mandrel enclosed in a metal sheath in place of the ordinary flexible cable. This mandrel is connected with the arm by a flexible elbow, and has at its other end a flexible wrist, to which the hand-piece is joined. This arrangement renders the whole arm more flexible, and the hand-piece much lighter in the hand than does the ordinary form of dental engine. The engine is made with a rocking motion, which renders the upright capable of being tilted either backwards or forwards.			
02807	Complete, with No. 7 hand-piece, slip joint attachment and oil can, all bright parts nickel-plated	5	5	0
02808	Do. do. do., with right-angle attachment and slip joint..	6	2	0
02809	Holland cover for do.	0	2	6
02810	Dental Engine, S. S. White model, with flexible cable, reinforced sheath, duplex spring connection, No. 7 hand-piece and slip joint attachment	5	5	0
02811	Universal angle handpiece for No. 2 slip joint attachment	1	10	0

Dental Engine Instruments, viz., Burs, Drills, Burnishers, Reamers, etc., etc., as listed by the leading Dental Houses, are kept in stock and supplied at moderate prices, but on account of their multiplicity, space cannot be found for them in a small catalogue of this description.

Sc 1/4 03000

03001

No.	Ether Inhalers, etc.—Contd.—	£	s.	d.
02999	Ormsby's, modified by Woodhouse Braine, with large detachable bag, sponge, and patent celluloid face piece in card box ..	1	0	0
03000	Silk's Celluloid, for ether or A.C.E. mixture, 3 sizes .. each	0	8	6
03001	Do. nickel-plated, with diaphragm and india-rubber cushion..	1	0	0
03002	Taylor's, celluloid, a modification of No. 03000, with gutter to prevent anæsthetic from running over the patient's face ..	0	9	0
03003	Waring's, nickel-plated, a modification of No. 03001, with detachable face piece, india-rubber cushion, and metal spring for holding the sponge; 2 sizes, children's and adults', each	1	3	0
03003a	Spare india-rubber cushions.. .. .	0	4	0

The detachable face piece is made with an inner lip, between which and the surface of the inhaler is a space of sufficient depth to contain any excess of moisture which may flow down. By this device, blistering of the face is effectually prevented.

S. MAW, SON & SONS.

Clinical Instruments, etc.—Contd.—

03191-92

No.	Clinical Thermometers—Contd.—	£	s.	d.
	Maw's "Allnought" Easy Set, certified by the National Physical Laboratory at Kew to be free from all corrections and to be accurate as to time—			
03191	30-seconds, magnifying	0	7	6
03192	60-seconds, magnifying	0	6	6

This thermometer has been put upon the market to meet a demand amongst physicians and surgeons for a very high-class instrument free from all corrections. It is recommended with the utmost confidence, as it is accompanied by a Kew Certificate, showing all noughts and certifying absolute accuracy as regards time. It is impossible to obtain a more perfect instrument.

03193

Maw's Patent, Aseptic—

03193	2-3 minute, magnifying	0	1	3
03194	60-seconds, magnifying	0	1	6
03195	30-seconds, magnifying	0	1	9

This Thermometer is the most perfect of its kind. The scale is etched on an internal tube permanently fixed in the outer casing of the Thermometer. It will be readily seen that the Thermometer, having a perfectly smooth surface, can be most effectually cleaned, and is absolutely germ-proof; there is also no possibility of the scale being effaced by use.

03196	Maw's, Tapering, for Hospital use, without cases, in 3-doz. quantities, per doz., 30-seconds, 9/9; 60-seconds, 9/-; 3-minute	0	6	9
03197	Do. do. do., in 6-doz. quantities, per doz., 30-seconds, 9/3; 60-seconds, 8/7; 3-minute	0	6	5
03198	Do. do. do., in 12-doz. quantities, per doz., 30-seconds, 8/10; 60-seconds, 8/2; 3-minute	0	6	1

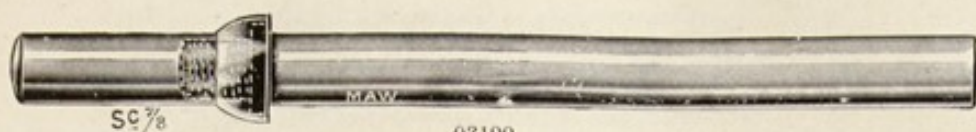

NOTE.—Every clinical thermometer manufactured by S. Maw, Son & Sons is guaranteed. A Kew Certificate can be obtained with each instrument, if required, at a cost of 1/2.

BREAKAGES.—Every precaution is taken in packing Clinical Thermometers, but, owing to the fragile nature of their construction, the firm decline to take the responsibility of their safe transit, either by post or any other means of conveyance; they are sent out entirely at the purchaser's risk.

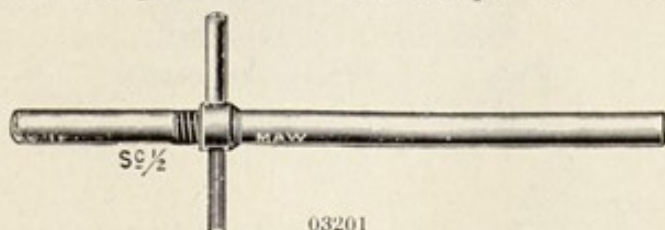

UNPACKING.—Clinical Thermometers (for the home trade) are always removed from their cases before packing, and the cases are packed separately. It is necessary to remember this fact when unpacking.

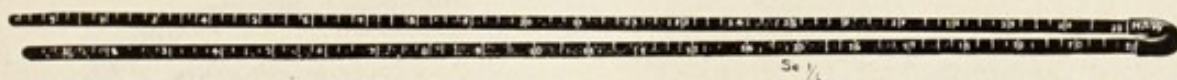

Clinical Instruments, etc.—Contd.—

No.	Clinical Thermometer Cases (special varieties)—	£	s.	d.

03249

- 03249 The "Harley" (unspillable), constructed with open scale and round bulb 1 15 0
- On account of the large surface of mercury exposed to pressure in the round bulb (as opposed to the ordinary cylindrical bulb), the displacement due to the rise of mercury in the tube is so small that it cannot be measured and may be ignored. As the bulb is only one-third full, and the tube which admits the air terminates exactly in the centre of the bulb, it is obvious that the mercury cannot be lost or upset.

03257

03257	Stethoscope (patent), chest piece and junction tubes only, in leather case	0	7	0
-------	--	---	---	---

The stethoscope is an improved instrument for auscultation, by means of which obscure heart murmurs and rales can be easily detected. It is constructed upon the same principle as the microphone, and will be found a great addition to the ordinary forms of binaural stethoscopes, inasmuch as it enables the user to auscultate through the clothes without having to compel the patient to undress. It does not easily get out of order, and being made of aluminium, is exceeding light.

03315	Do. without stand	0	0	9

DIRECTIONS FOR USE.—Pour urine into the tube up to the mark U, and add the reagent up to R; now close the tube with the thumb and invert it several times so as to mix the fluid without shaking. Allow the tube to stand for 24 hours, then read off on the scale the height of the coagulum. The figures indicate the parts per 1,000 of dried albumen in the urine, which, divided by 10, will give the percentage. When the albumen is very abundant the urine should be diluted with an equal quantity of water and the result multiplied by two. If the urine is alkaline it must be first acidified with acetic acid. The reagent employed is a solution of picric acid containing 10 grammes to the litre with 20 grammes of citric acid.

MICROSCOPES, ETC.,

MANUFACTURED BY
HENRY CROUCH.

About four years ago we took over the business of Henry Crouch—one of the best Microscope makers in this country—and we now manufacture his instruments in our own workshops under his personal supervision. We are therefore able to supply all his various models on the best possible terms, and at the same time can compete with other houses in supplying Microscopes of any other make.

The Microscopes figured and described in the following pages are the result of more than fifty years' experience in the construction of first-class Objectives, Stands and Accessories. During this period Mr. Crouch's efforts have been greatly assisted by gratuitous hints and advice from most of the leading Bacteriologists of the Universities and Medical Schools of the kingdom. Since the publication of the 1905 Catalogue many of the best types of Microscopes have been modified to meet the requirements of advanced workers, and new models have also been added. All objectives, therefore, included in this list can be absolutely guaranteed. Amongst the many public bodies to which Crouch's microscopes have been supplied during recent years may be mentioned the Army Medical Service, the Crown Agents for the Colonies, the British South Africa Co., and most of the Universities both at home and abroad.

Objectives.—Since 1885 experiments have been continuously carried on with every description of optical glass produced, and all those kinds which were found unsuitable for the manufacture of lenses have been carefully eliminated. The result is that during the past fifteen years, although the homogeneous immersion and other objectives have been in continuous use in all tropical climates, not one has been returned for correction.

Eye-pieces.—All Eye-pieces are so made that, given a proportional increase of power, the lower principal foci are always in the same plane, so that an exchange of eye-pieces does not necessitate re-focussing.

Stands.—All Crouch's Stands are of the most recent type of construction, and have been modified with a view to meeting the requirements of those who prefer the fine adjustment at the side of the instrument; and in order that the upper surface of the stage may be kept clear for the examination of plate cultures, the cross-traversing adjustment has been made removable. This latter modification also allows of an extended range of $2\frac{1}{2}$ in. (65 mm.), so that the whole area of a film can be systematically examined.

Fine Adjustment.—Two different methods of fine adjustment have been adopted in the instruments illustrated in the following pages, namely the "triangular bar" method and the "cam and screw" method. In the former (see fig. C4) the "limb" carrying the body tube focusses a sleeve working over a triangular bar, and motion is communicated by means of a left-handed screw of 80 threads to the inch, with a hardened and polished point, which comes in contact with a hardened and polished steel surface. An exceedingly delicate and absolutely instantaneous reversal of action, with stability of focus, is thus ensured. In the "cam and screw" method there is a screwed gearing with milled heads at the side of the instrument (see fig. C1), the pitch of the screw for each rotation giving

**Microscopes by Crouch—Contd.—**

a displacement of 0.1 mm. The drum attached to the milled head is divided into 100 parts, so that a movement of one division causes a practical displacement of 0.001 mm.

Dark-ground Illuminator.—The high-power immersion dark-ground Illuminator or Condenser is of quite recent introduction, and can be used with either the medium-power "dry" or the high-power Immersion Objectives, as fitted to all Crouch's Microscopes. This important addition to the illuminating accessories used in the examination of unstained living micro-organisms under high magnification is an essential adjunct to a modern microscope. By its use the transmitted rays are refracted in such a manner that only the light from the object under examination reaches the eye of the observer, so that the resulting image is viewed under more natural conditions and better results are obtainable.

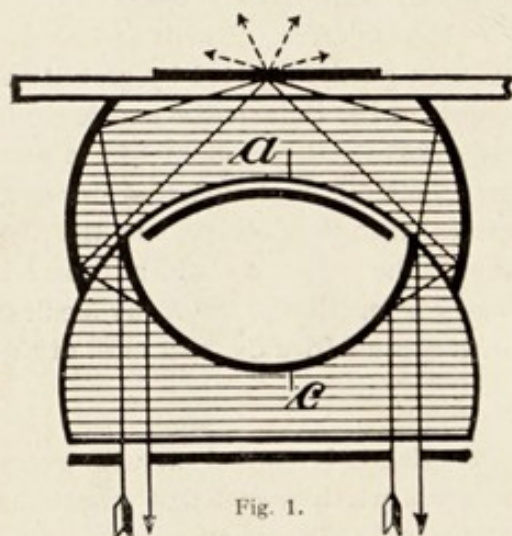

Fig. 1.

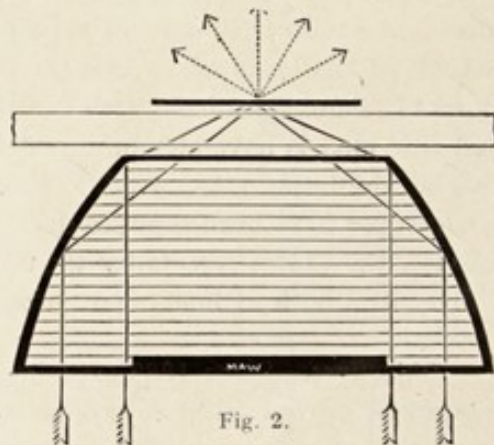

Fig. 2.

Diagrams showing the course of the rays in the Leitz (fig. 1) and the Zeiss (fig. 2) Dark-ground Condensers respectively.

A dry $\frac{1}{6}$ th in. objective or its equivalent apochromatic, when used in conjunction with a dark-ground condenser, should be provided with an adjustment "for use with varying thicknesses of cover glass, or extra length of draw-tube," and a back stop for reducing the aperture, but an oil immersion objective should be fitted with a stop behind the back combination of lenses in order to reduce the aperture, otherwise a dark ground cannot be obtained. The application of cedar wood oil between the under-surface of the glass slip and the upper-surface of the condenser is a necessity with either form of objective, but with the "dry" $\frac{1}{6}$ th it is, of course, unnecessary to use it on the upper surface of the slip. Brilliant illumination, either from an incandescent gas lamp, or better still from a Nernst or arc lamp, is necessary in order to obtain the best results.

The following is a list of Universities, Colleges, Hospitals, Medical Schools, etc., to which Crouch's Microscopes have been supplied:—

Aberdeen University.	Royal Irish University.	University College, London.	St. Bartholomew's Hospital.
Cambridge do.	St. Andrew's do.	Do. do. Dundee.	St. George's do.
Durham do.	Sydney do.	Brompton Hospital.	St. Thomas's do.
Glasgow do.	Toronto do.	Dover do.	Victoria (Belfast) do.
Manitoba do.	Eton College.	Foster Green do. Belfast.	School of Tropical Medicine,
Michigan do.	King's College.	Guy's Hospital.	London.
Montreal do.	Queen's do. Belfast.	London do.	School of Tropical Medicine,
Oxford do.	Do. do. Cork.	North London Hospital.	Liverpool. (sicians.
Pennsylvania do.	Do. do. Galway.	Royal Free Hospital.	The Royal College of Phy-

Microscopes by Crouch—Contd.—

The "Opsonist" Microscope—

This has been added to meet the demand for a microscope with fine adjustment at the side of the limb.

The **Coarse Focussing Adjustment** is by means of a diagonal rack and pinion.

The **Fine Adjustment** is executed by means of the new micrometer movement, with drum divided to read to 0.001 mm., and the milled heads are fitted on each side of the limb for greater convenience, instead of at the back, as in the older models.

The **Stage** has vertical and cross traversing mechanical adjustments of 1 in. and 2½ in. respectively, and is made removable, so that a cultivation on a plate or Petri dish, or a large section can be examined without difficulty.

It is fitted with large **Mirrors**, both plane and concave, with complete adjustments.

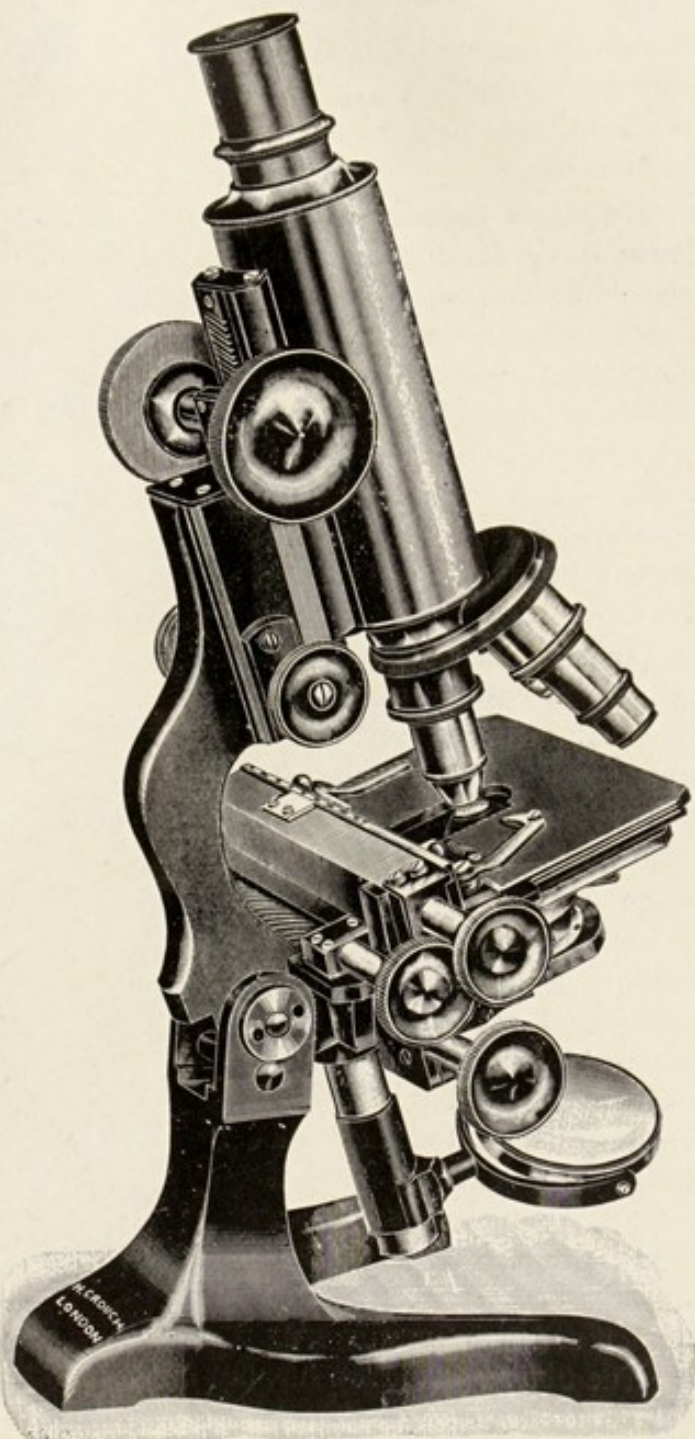

The **Foot** is of solid brass and admits of inclination at any angle with perfect stability. When used in an upright position the mirror and substage are conveniently adjustable.

The **Substage** is perfectly centred to the objectives supplied with it, and has a focussing adjustment by diagonal rack and pinion; it is also made to swing out for the more convenient change, when necessary, of the accessory apparatus.

When used in an upright position, the substage and mirror are more readily adjustable, and on account of the shape of the limb, the eye-piece is brought nearer to the observer, which necessitates much less stooping—a matter of considerable moment when the instrument is in prolonged use.

The **Eye-pieces** are three in number, and with a tube length (including nose-piece) of 170 mm., give a power of $\times 4$, $\times 6$, and Compensating $\times 8$.

The **Objectives** supplied are $\frac{3}{4}$ in., $\frac{1}{2}$ in., N.A. .85, and oil immersion $\frac{1}{2}$ in., N.A. 1.30. It is fitted with high-power **dark ground condenser** for the examination of living bacteria or spirochaetes, **Abbé Condenser** N.A. 1.20 with iris diaphragm, and **Dust-proof Triple Nose-piece**, the lower powers being carefully adjusted to the same focal plane as the $\frac{1}{2}$ in., and all being correctly centred.

Microscopes by Crouch—Contd.—

The "D.P.H." Microscope—

This Microscope has been constructed for research and other work of the highest class in Bacteriology.

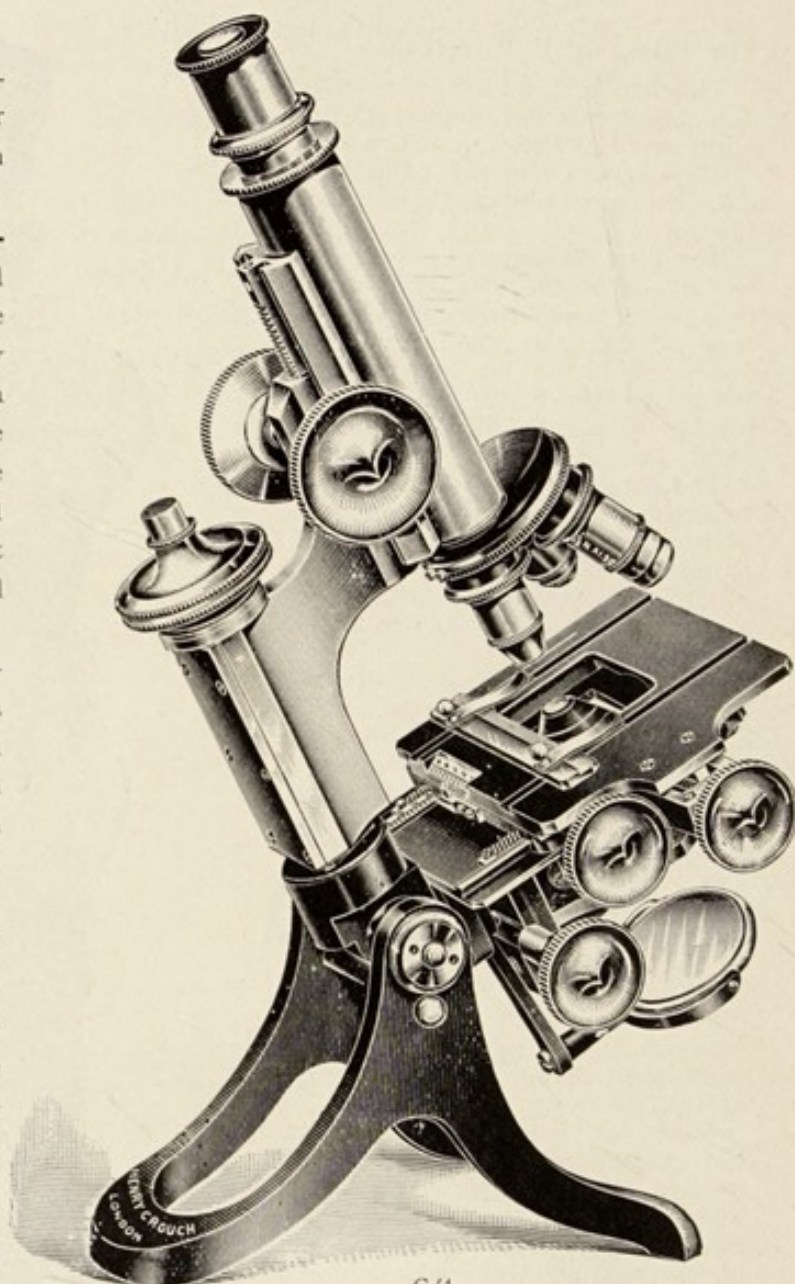

The Coarse Focussing Adjustment is by diagonal rack and pinion, the bearings of which are much wider than ordinarily made and consequently much more solid and durable. The fine adjustment is executed by the direct action of a left-handed micrometer screw .01, in contact with a polished hardened steel plate.

The large Stage has rectangular adjustments by means of a diagonal rack and pinion and quick screw, with a range in each direction of 25 mm. (1 in.), each adjustment having a graduated millimetre scale.

The Sub-stage can be swung aside for greater convenience in exchanging accessories. It is focussed by means of a diagonal rack and pinion, but, by special request of several eminent bacteriologists, centring adjustments are not included.

The Eye-pieces are three in number, *viz.*, Huyghenian $\times 4$ and $\times 6$, and Compensating $\times 8$.

The Objectives usually supplied are $\frac{2}{3}$ in., $\frac{1}{6}$ in., and oil immersion $\frac{1}{12}$ in., N.A. 1.30 or 1 in., $\frac{1}{8}$ in. and $\frac{1}{12}$ in. (the $\frac{1}{8}$ in. can be supplied in place of the $\frac{1}{6}$ in. if preferred). It is fitted with **Dust-proof Triple Nose-piece**, the two lower powers being carefully adjusted to the focal plane and correctly centred, and **Abbe Condenser** N.A. 1.20, with iris diaphragm, and is packed in a polished teak cabinet.

Microscopes by Crouch—Contd.—

C/9

The "Army Medical."—

This Microscope is the same in all particulars as No. C/4, except that it has a specially constructed stage giving a cross traversing range of $2\frac{1}{2}$ in., and graduated to millimetre scale, the vernier reading to $\cdot 1$ mm., and is fitted with a tube of larger diameter for micro-photography. This stage can be removed for the examination of cultivations, etc.

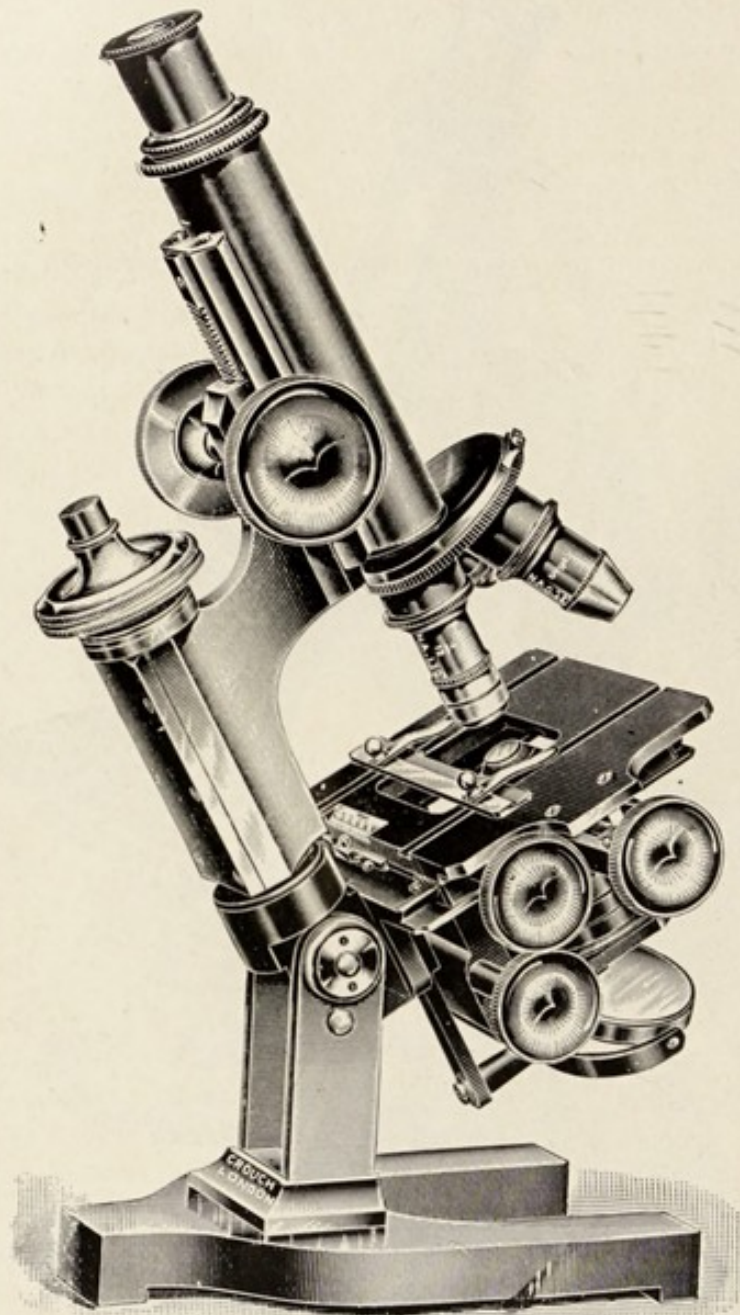

No.		£	s.	d.

Hire of Microscopes —

A limited number of the more expensive Microscopes can be sent out on hire at the rate of 21/0 per month, payable in advance.

Microscopes by Crouch—Contd.—

MICROSCOPE OBJECTIVES.

Thanks to the constantly increasing varieties of glass on the market, the manufacture of the highest-class Objectives has of late years been considerably improved. Continual experiments carefully performed, and aided by the application of new formulæ, have led to the further elimination of spherical and chromatic errors, and to a corresponding increase in the brilliance of the image and effective aperture.

The Objectives listed below are of especial value to students of Practical Physiology, Pathology and Bacteriology, and owing to the perfection of marginal definition they are also particularly adapted for Micro-Photography, and are largely used for this purpose.

From the 4 in. to the $\frac{1}{2}$ in. they are available with either the 10 in. or $6\frac{1}{2}$ in. tube length. All of higher power are adjusted to the $6\frac{1}{2}$ in. length, with Nose-piece (170 mm.). If required for use with the longer 10 in. English tube, or for Micro-Photographic work, this should be specially notified when ordering.

All Objectives are adjusted for a medium thickness of cover glass of from 0.15 to 0.20 mm.

The Homogeneous immersion $\frac{1}{2}$ in. of this series is of the greatest optical excellence. It has been supplied in large numbers to H.M. Government for the Army Medical and Tropical Services, etc., and its stability is guaranteed for any climate.

The mounting of the lenses is also of the very highest class.

Microscopes by Crouch—Contd.—

Objectives (Crouch).—The glass used in the construction of this series has been tested for many years, and its stability is guaranteed.

Dark-ground Illuminators, high power—

C/92	Nelson's	2	2	0
C/93	Leitz's Model	2	2	0
C/94	Zeiss Model	2	2	0

An extra charge of from 5/- to 6/- is made for fitting dark-ground illuminators to microscopes other than those of standard types.

High-power Dark-ground Illumination.

General Directions.

(1) Remove the Abbé Condenser from the sub-stage sleeve fitting, and replace it by the dark-ground condenser provided with centring screws, bringing it into position by racking it up flush with the microscope stage.

(2) It is essential that the glass slide should be about 1 mm. thick. This is of the greatest practical importance, and it is also advisable that a thin cover glass (No. 1) should be used.

Microscopes by Crouch—Contd.

Accessory Apparatus—Contd.—

(3) Using the plane mirror, arrange the lamp preferably in front of the microscope at 12/13 inches distance. Then interpose the bull's-eye condenser between the lamp and mirror at a distance from the lamp of from 2/3 inches and adjust the height of the lens so that the centre is coincident with the flame of the lamp, with the convex surface towards the mirror. Place a piece of white paper across the mirror and so arrange the lamp and bull's-eye as to obtain a bright image of the illuminant (the pattern of the mantle) on it.

(4) To centre the condenser, use the lowest eye-piece $\times 4$ and the $\frac{2}{3}$ objective. Focus the latter carefully upon the upper surface, looking for two very faintly marked concentric rings, of which only a portion will probably be seen in the field of view. Then by means of the two centring screws of the condenser bring the rings into the centre of the field, and the adjustment is completed.

(5) Carefully wipe the upper surface of the condenser to remove all dust, and lower it as far as possible. Then wipe the under-surface of the glass slide, add a drop of cedar oil to it, and place it in position on the stage. Now gently raise the condenser till contact is made with the oil on the under side of the slide. If carefully done by this method the formation of air bubbles will be prevented.

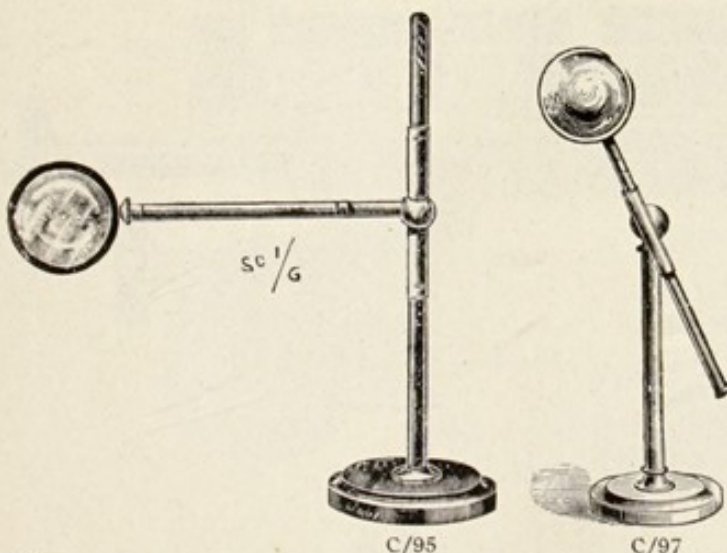

(6) Using the $\frac{2}{3}$ objective, adjust the slide till the portion of the specimen required is in the centre of the field of view, and is seen upon a black ground with a brightly illuminated centre. Now rack the condenser down very slightly without breaking contact with the oil, and note when the central illumination is brightest and smallest. At this point remove the $\frac{2}{3}$ objective, and prepare for examination with the high power.

(7) If a $\frac{1}{2}$ -in. dry objective be used, a stop is unnecessary, but with a $\frac{1}{2}$ -in. immersion it will be necessary to reduce the working aperture of the objective by means of a stop fitted behind the back combination of lenses. This is accomplished by unscrewing the optical combination from the brass mount and screwing the small black stop found in the lid of the objective box into the front of the mount, then replacing the combination. Now bring the objective into position in the usual manner.

Should the illuminator be found not quite central, a slight further adjustment by means of the centring screws and mirror can be made.

(8) When a $\frac{1}{2}$ -in. objective is being used with the ordinary method of illumination, as in examining stained specimens, the stop **must be removed**, otherwise very imperfect results will be obtained.

(9) After use, the oil should at once be wiped off the surface of the condenser and the brass mount. It should then be replaced in the case provided for it, since absolute cleanliness is essential to its due performance.

No.

Condensers, for illumination of Opaque Objects, etc.—

BACTERIOLOGICAL APPARATUS AND
MICROSCOPE SUNDRIES.

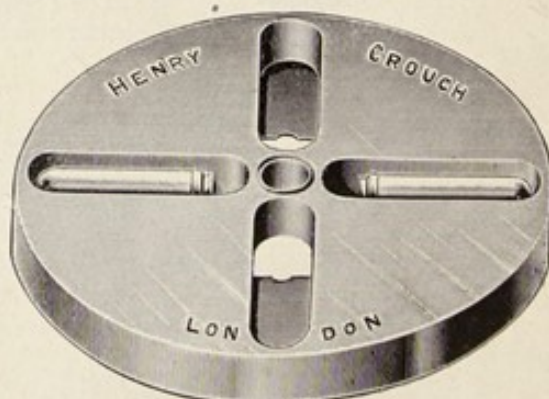

C/119—C/120

Centrifuges, Water-driven—

Designed by Dr. C. J. Martin, F.R.S., Director of the Lister Institute of Preventive Medicine, and manufactured under the superintendence of Henry Crouch.

Description.

This form of Centrifuge consists of a plate with four radiating chambers (see below), each having a depth sufficient to take a tube and its necessary holder flush with the under surface of the plate, thus avoiding all atmospheric resistance. The plate is fitted to a spindle, pivoted between an upper and lower centre, and the spindle carries at its lower end a small water-wheel in a "well" to which are attached the nozzle or nozzles and fittings for connecting with the water main and for carrying off the waste water. The upper centre is poised lightly to avoid friction, and is mounted in a flexible holder, thus giving the necessary freedom from strain when working at high speeds. Three sizes of plates are made, carrying tubes of 25 c.c., 10 c.c. and 5 c.c. capacity respectively. The speed has been carefully measured, and a rotation of from 1,000 to 7,000 revolutions per minute can be maintained with ordinary pressure and with absolute safety.

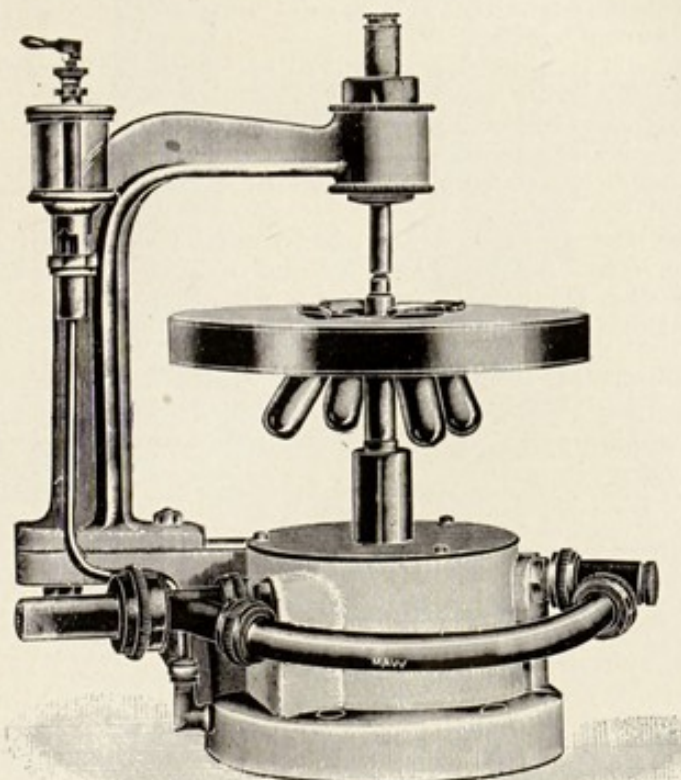

Under Surface of Plate.

Bacteriological Apparatus and Microscope Sundries—Contd.—

Centrifuges, Water-driven—Contd.—

No.		£	s.	d.
C/119	Single Jet Apparatus, for high pressures, with 5 c.c. brass plate, four German silver tube holders, and 1 doz. glass tubes ..	5	5	0
C/120	Do., do., with 10 c.c. brass plate, holders and tubes	5	6	0

C/121—C/123

C/121	Double Jet Apparatus for low pressures, with 5 c.c. brass plate, four German silver tube holders and 1 doz. glass tubes ..	5	15	0
C/122	Do., do., with 10 c.c. brass plate, holders and tubes	5	16	0
C/123	Do., do., with 25 c.c. brass plate, holders and tubes	7	7	0

Additional 5 or 10 c.c. brass plates, extra 30/- each.

With very low pressures or in cases in which unusually rapid revolutions are required it is advisable to have the plates, more especially the larger ones, in a special light alloy instead of brass.

C/124	Light Alloy Plates, 5 c.c. extra	0	4	0
C/125	Ditto ditto, 10 c.c. „	0	5	0
C/126	Ditto ditto, 25 c.c. „	0	6	0

A Pressure Gauge is indispensable to the comfortable working of the apparatus in consequence of the varying pressures. Diminished speed is often attributed to some fault in the apparatus, when it is in reality due to failure of pressure.

C/127	Pressure Gauge	0	13	6
C/128	Spare Glass Tubes, 5 c.c. per doz.	0	1	6
C/129	Ditto ditto, 10 c.c.	0	1	10
C/130	Ditto ditto, 25 c.c.	0	2	3

Directions for Fixing, see next page.

Bacteriological Apparatus and Microscope Sundries—Contd.—

Centrifuges, Water-driven—Contd.—

Directions for Fixing, and for the Use of Centrifuges.

1. See that the table or bench to which it is to be fixed is carefully levelled.
2. When the "well" is screwed down and before the cover is replaced, the point of the jet must be adjusted to within about $\frac{1}{4}$ inch of the motor wheel, and fixed in position by the counter nut; then connect with the supply and see that there is no obstruction.
3. Replace the well cover and plate carrying the tube holders; then bring the upper centre into position, taking care that it is so lightly poised over the spindle that practically there is no friction during rotation.
4. **Lubrication.**—It is absolutely essential to the perfect working of the Centrifuge that the centres should be **daily** and **regularly** lubricated before use; also that the oil tube and gravity cup should be kept well supplied while in constant use. The heavy petroleum oils as used for gas engines are the most suitable.
5. The plate, when working, must always be equally balanced, *i.e.*, the tubes must be used in pairs and not singly.
6. In attaching the waste pipe take care that it is **never** less in diameter than the outlet.—1 inch iron barrel for the single jet and $1\frac{1}{2}$ inch for the double jet.
7. In the case of a Double Jet Apparatus with high pressure, it is of advantage to fit a stop tap so that one of the jets can be cut off when the small size plates are in use.

Table of Revolutions per minute obtainable with Dr. Martin's water-driven Centrifuges under various pressures.

Single-jet Apparatus—

Pressure in lbs.	Brass Plate.		Aluminium Plate.

Centrifuges, Electrically-driven (Crouch)—

When, owing to low water pressure, or as in large institutions a fluctuation of pressure, the water-driven machine is found unsuitable, one electrically driven becomes the natural corollary, and the later pattern of Dr. Martin, fitted with Dr. Sydney Rowland's clutch, has proved the greatest success. As in the water-driven apparatus, it has the upper centre mounted in a flexible holder and is fitted with properly adjusted lubricators. It is supplied with a suitable motor with a three-speed pulley, which enables reliable speeds of 2,000, 4,000 and 6,000 revolutions to be steadily maintained.

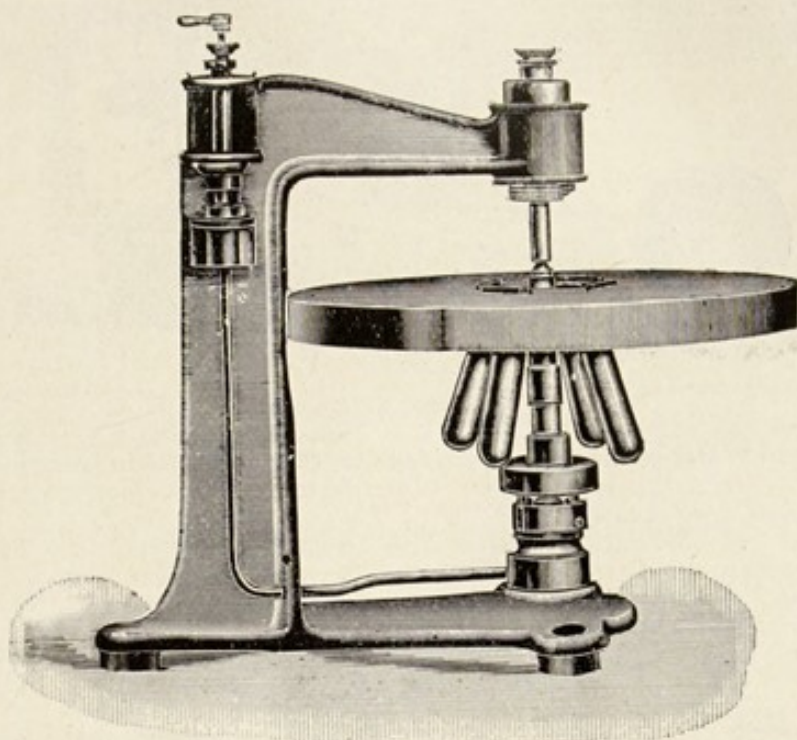

If the motor is not of sufficient power, it must be borne in mind that its initial speed becomes reduced when the larger pulleys are used.

As the result of an extended experience it is recommended that the motor should not be of less than $\frac{1}{4}$ H.P., and that a regulating switch of good construction should always be included in the outfit; also that motor, switch and centrifuge should be mounted on a base of polished teak wood, and that space should also be left on the base for the fixing of a shaker, if required, to be driven from the same motor.

It is essential that the nature of the current (whether direct or alternating), the periodicity, and voltage should be stated at the time of ordering, so as to ensure the desired result.

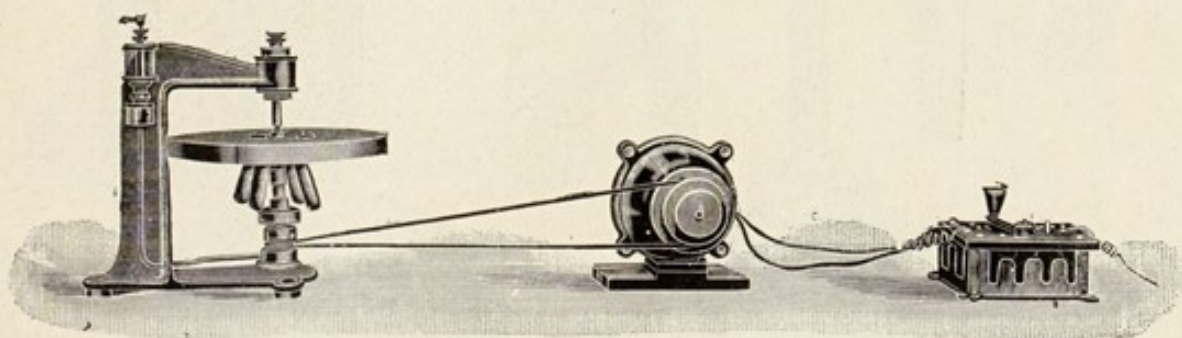

Bacteriological Apparatus and Microscope Sundries—Contd.—

C/131—C/134

Enlarged view of Electrically-driven Centrifuge.

C/131—C/134

Centrifuge connected with motor and switch.

Centrifuges, Electrically-driven (Crouch)—Contd.—

Centrifuge, Motor ($\frac{1}{4}$ -horse) and Controlling Switch, mounted on polished teak base, as illustrated, with runners for adjustment of band.

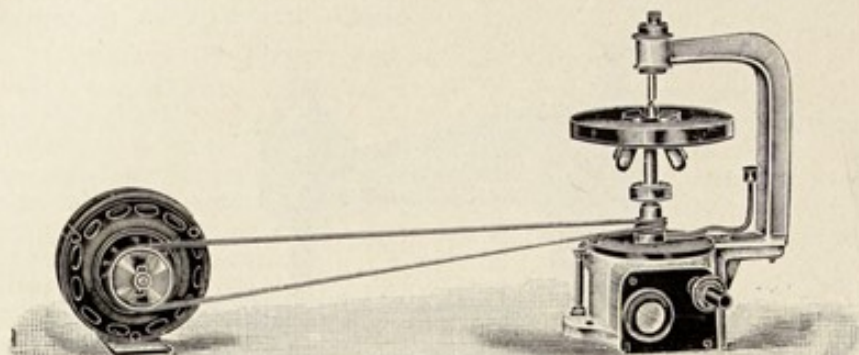

No.			£	s.	d.
C/131	For 110 volt current, fitted with 10 c.c. brass plate	14	0	0
C/132	Ditto, ditto, fitted with 25 c.c. brass plate	14	12	0
C/133	For 220 volt current, fitted with 10 c.c. brass plate	14	10	0
C/134	Ditto, ditto, fitted with 25 c.c. brass plate	15	2	0
<i>For prices of other plates see page 389.</i>					
C/135	Watkin's Switch	0	12	6

NOTE.—The nature of the current (whether direct or alternating), the periodicity, the voltage and all available particulars must be given at the time of ordering. Advice as to the outfit required and estimates, will be given when desired.

For speeds of 9,000 revolutions and higher, Dr. Martin considers it essential that specially constructed steel tube holders should be used. The extra cost would be £2 2s. up to a capacity of 25 c.c.

Bacteriological Apparatus and Microscope Sundries—Contd.—

C/136—C/139

No.

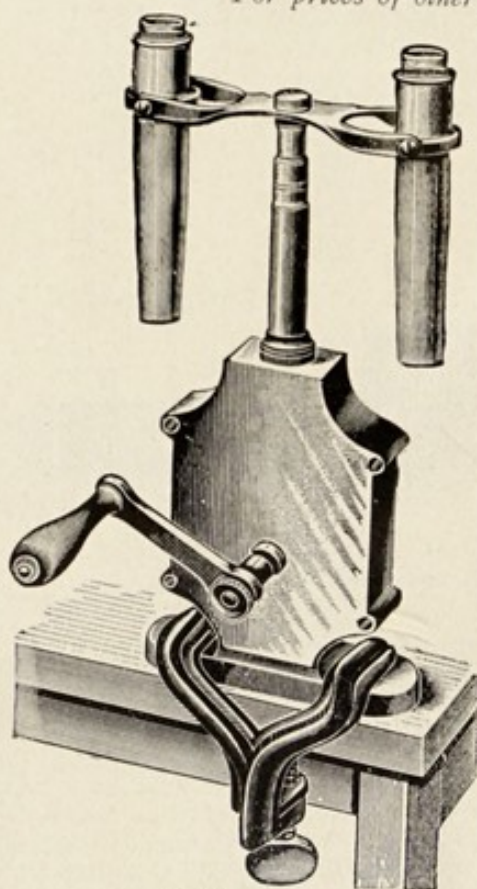

£ s. d.

Combined Water or Electrically-driven Centrifuges, useful in Institutions where the water-power is liable to fail and electric current is also available—

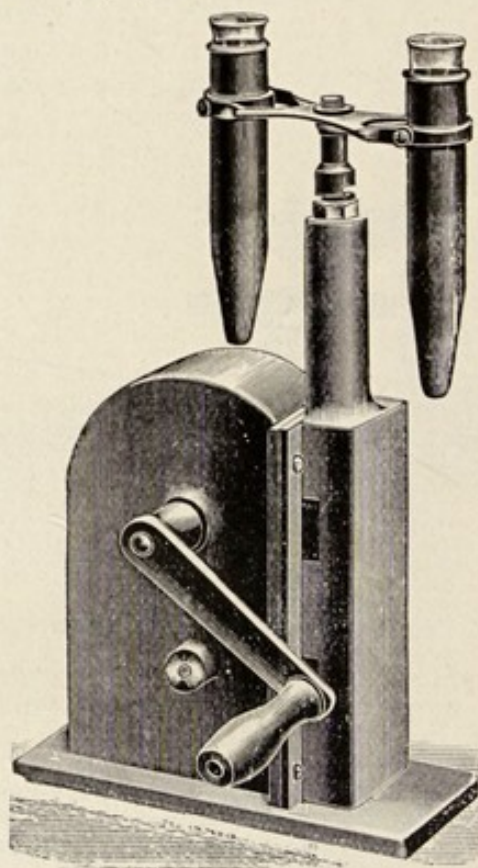

C/136	For 110 volt current, fitted with 10 c.c. brass plate	11	5	0
C/137	Ditto, ditto, fitted with 25 c.c. brass plate	11	17	0
C/138	For 220 volt current, fitted with 10 c.c. brass plate	12	0	0
C/139	Ditto, ditto, fitted with 25 c.c. brass plate	12	12	0

A $\frac{1}{4}$ -h.p. motor is supplied with either outfit.

For prices of other plates see page 389.

C/272	Steel Cylinder, filled with 10 lbs. of CO ₂	1 15 0
C/273	Refilling Cylinders	0 3 6

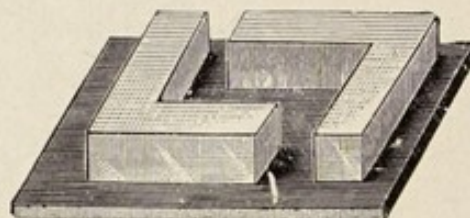

* This form of microtome is indispensable for clinical work where stained sections of morbid tissues are required within a few minutes of the beginning of an operation in order that the surgeon may determine his mode of procedure. It freezes almost instantaneously, regardless of room temperature or humidity, and at a very small cost. The temperature of the object to be frozen is, within limits, under the control of the operator. The knife slides in glass girder and the microtome may be attached directly to a CO₂ cylinder.

Sterilizer (Autoclave)—

Worked by high-pressure steam and fitted with Maw's special "control" mechanism for automatically cutting down the gas flame when the steam pressure has risen to the desired height, and Maw's registered bottom plate, which enables the full pressure of 5 lbs. to be obtained in 17 minutes. It is constructed of enamelled iron with copper interior and brass fittings, and is furnished with one nickel-plated copper drum.

SPLINTS AND APPLIANCES

As used by Dr. H. J. GAUVAIN, at
THE LORD MAYOR TRELOAR CRIPPLE'S HOME AND COLLEGE,
ALTON, HANTS.

03624

No.

£ s. d.

Gauvain's Celluloid Jackets for tubercular affections of the spine, constructed of non-inflammable celluloid strengthened with highly-polished steel bands, and lined with chamois leather—

03624	Children's sizes	each, from	3	10	0
03625	Adults' sizes	6	6	0

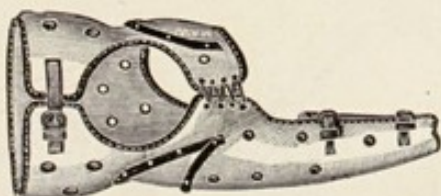

03626

03627

Gauvain's Celluloid Splints, for tubercular or other affections of the joints in children, constructed of non-inflammable celluloid strengthened when necessary with highly-polished steel bands and lined with chamois leather—

03626	For Ankle	each, from	1	5	0
03627	For Elbow	1	5	0

03628

03630

03628	For Hip	each, from	2	10	0
03629	For Knee, with foot	1	5	0
03630	Do. without foot	1	1	0

The chief advantages claimed for Dr. Gauvain's celluloid splints are—Strength, Lightness and Ventilation. An accurate fit is so essential in rendering the joint immobile that it has been found quite impossible to make these splints from measurements. A Plaster of Paris mould is required in every case, on receipt of which a cast is made and the resultant splint is guaranteed to fit this cast. An expert in Plaster of Paris can be sent to any part of the country to take the mould if desired at a charge of 21/- per day and third-class return fare.

The process of manufacture is slow and usually takes about three weeks.

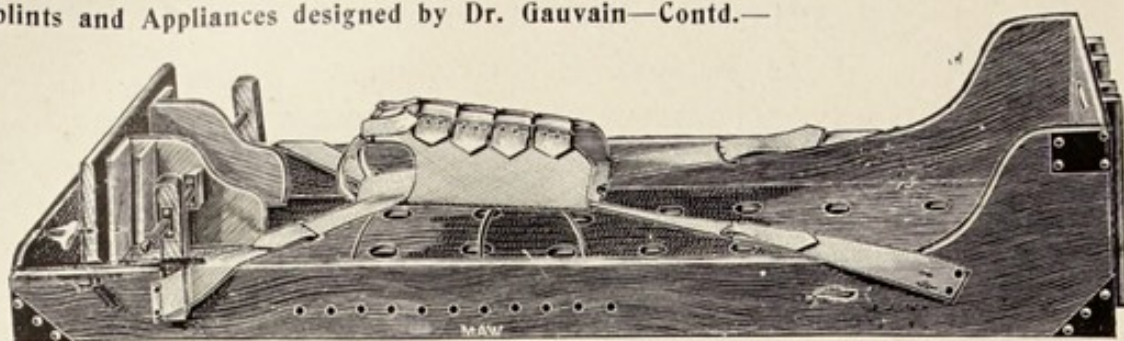

The prices quoted above are for children's sizes, ages 1-4 years; larger sizes will be charged on the same ratio.

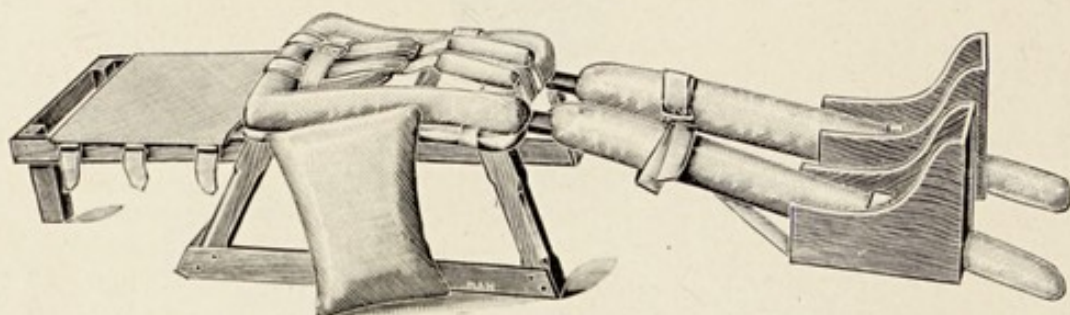

S. MAW, SON & SONS.

SURGICAL AND ORTHOPÆDIC APPLIANCES, Etc.

There are comfortable Fitting Rooms, with Male and Female Attendants, at 11, Aldersgate Street, where patients will receive skilled attention on production of a written order. This should state clearly whether the patient is to pay cash or the article is to be charged to account.

The Rooms are open daily from 10 a.m. to 5 p.m. (Saturdays 9 a.m. to 12 noon). A small fee, varying according to time occupied, is charged for each attendance.

Fitters can be sent to any part of the country at a few hours' notice.

Forms for Self-measurement sent on application.

Artificial Arms and Hands, for Amputation above Elbow—

03645	Arm, with elbow joint, detachable articulated hand and rotating wrist plate, 2 qualities each, £10 10 0 and	13	10	0
-------	---	----	----	---

The thumb of the above hand is kept in apposition to the first finger by means of a carefully adjusted spring, strong enough to hold a newspaper or light book. The palm of the hand is fitted with a steel socket into which various instruments (Nos. 03659 to 03668) can be fitted, and, when the hand is removed, the socket in the wrist plate will be found capable of taking other implements of a stronger nature (Nos. 03669 to 03673).

03646

DIRECTIONS FOR MEASUREMENT.

CIRCUMFERENCE.—No. 1 at axilla, No. 2 at middle of stump, No. 3 at end of stump, and No. 4, No. 5, No. 6 and No. 7 on sound arm.

LENGTH.—No. 1 to 3 from axilla to end of stump, No. 1 to 4 from axilla to centre of elbow on sound arm, and No. 4 to 7 from centre of elbow to wrist on sound arm.

State whether right or left arm is required. Send a tracing on paper of the sound hand with the fingers extended, and a glove for the artificial hand.

The measurements of the sound arm are not necessary in the case of a leather socket.

03647

03646	Leather Socket, curved, for very short stump, fitted with ring, and knife or fork	2	7	6
03647	Leather Socket, straight, for medium or long stump, fitted with hook, and knife or fork	2	2	0

Surgical and Orthopædic Appliances, etc.—Contd.—

The Hand supplied with No. 03650 is the same as that described under No. 03645.

DIRECTIONS FOR MEASUREMENT FOR AMPUTATION BELOW ELBOW.

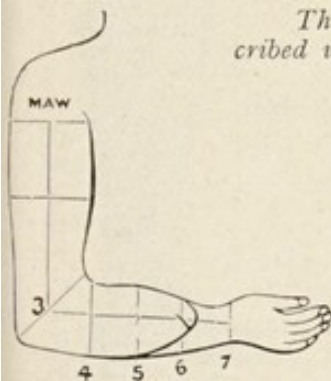

CIRCUMFERENCE.—No. 1 at axilla, No. 2 at middle of arm, No. 3 at elbow, No. 4 below elbow, No. 5 at middle of stump, and No. 6 at end of stump.

LENGTH.—No. 3 to 6 from centre of elbow to end of stump, and No. 3 to 7 from centre of elbow to wrist on sound arm.

Give a tracing on paper of the sound hand with the fingers extended, and send a glove for the artificial hand.

State whether right or left arm is required.

The measurements and particulars of the sound arm are not necessary in the case of a leather socket

03652

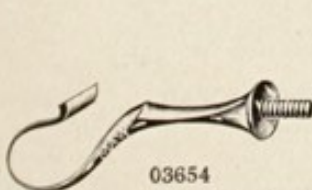

03653

Artificial Hands—

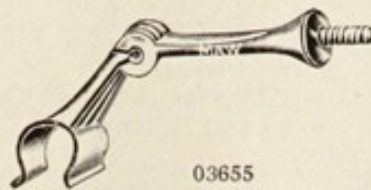

03652	For partial amputation	from	4	0	0
03653	Do. do.	3	0	0

(For complete amputation, see Artificial Arms for Amputation below Elbow.)

A plaster cast of the stump is required in all cases before making a part-hand for partial amputation. Hands of this description are made with a view to rendering the deficiency less conspicuous, and are always worn under a glove. If of sufficient size, the hand is provided with a slot into which a knife or fork can be fitted.

03675

03676

No.	Artificial Legs and Feet, for Amputation above and through Knee—	£	s.	d.
03674	Leg, with either wood or leather bucket (without boot)			
		£10	10	0 or 15 15 0

This leg is recommended chiefly for a long stump. The knee consists of a tendon joint with a steel bolt. The bending of the knee and the natural swing of the lower part of the leg in walking are controlled by a strong catgut tendon running down the back of the leg and partially concealed by the calf pieces, which can be easily detached when the tendon requires adjustment. Strong braces are provided. Average weight, 4½ lbs.

03675	Leg for a very short stump with absence of controlling power, useful after Furneaux Jordan's amputation, 2 qualities	£14	0	0 and 16 16 0
-------	--	-----	---	---------------

This leg is fitted with a broad pelvic waist band attached by means of a steel joint at the hip, which enables the bucket to be kept well up to the stump. The knee and ankle joints are controlled by a full length tendon. Average weight, 5½ lbs.

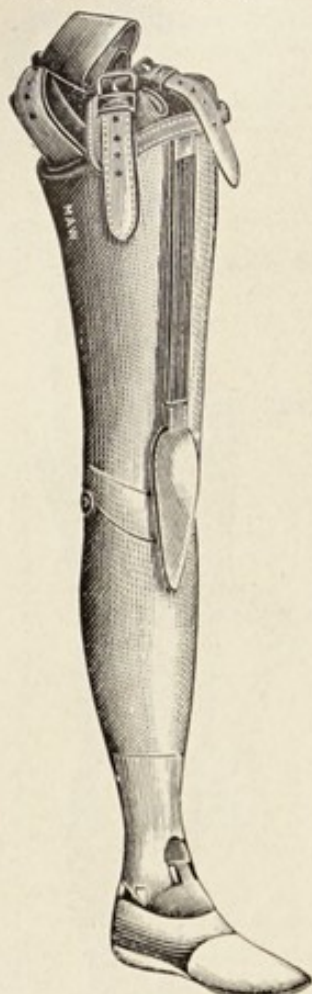

03676	Leg, with wood bucket and high knee joint, for medium short stump, 2 qualities	£13	10	0 and 16 16 0
-------	--	-----	----	---------------

This leg is similar in construction and movements to No. 03674, but is made with a wood bucket, and is specially designed for a medium short stump, the knee joint being carried higher up than in No. 03674, so that a longer tendon can be used, giving greater leverage and more personal control over the lower part of the leg.

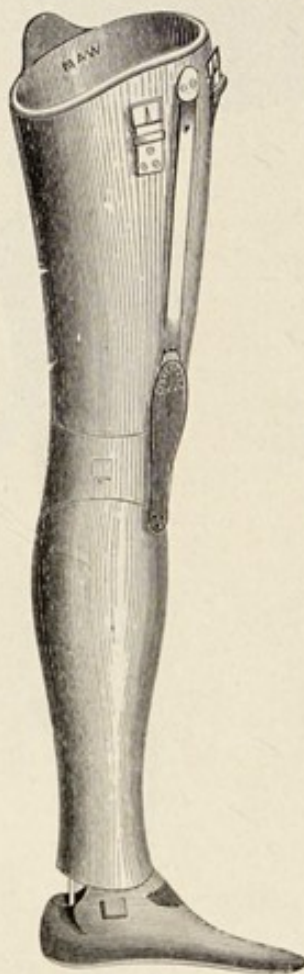

Average weight, 4½ lbs.

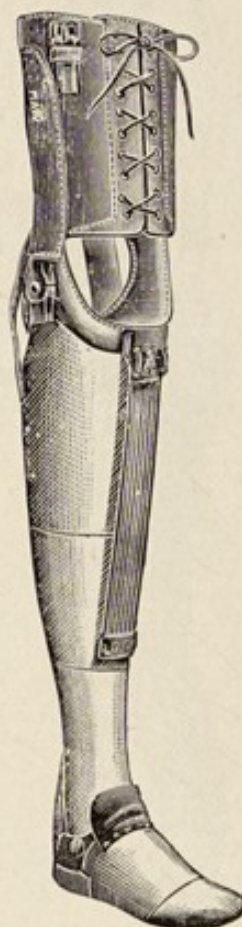

Surgical and Orthopædic Appliances, etc.—Contd.—

03677

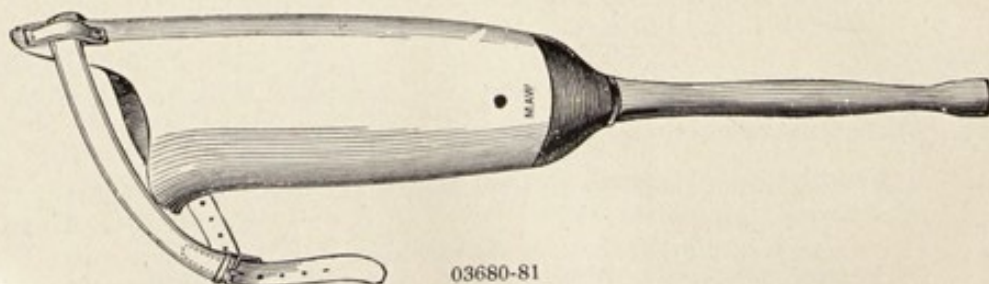

03678

03679

Artificial Legs and Feet, for Amputation above and through Knee—Contd.—		£	s.	d.
No. 03677	Leg, designed to meet the requirements of an operation through the knee joint. The knee joint is made up of a hollow block with improved American bolt-joints in steel; the ankle joint is the improved type of Anglesea joint. Average weight, 4½ lbs. Made in 3 qualities, £10 10 0, £13 0 0 and	15	15	0
03678	Leg, with knee and ankle joints. The upper part and calf pieces are hollowed out and covered with basil skin; the ankle joint has a spring at the heel. A double shoulder-brace is provided. Average weight, about 5 lbs.	9	0	0
03679	Leg, made on the knee-pan principle, for amputation through the knee joint with the patella left and folded under the end of the stump. Much of the lifting power is obtained by means of a strong elastic spring attached to the front of the pan and carried down to the solid part of the fore leg	12	10	0

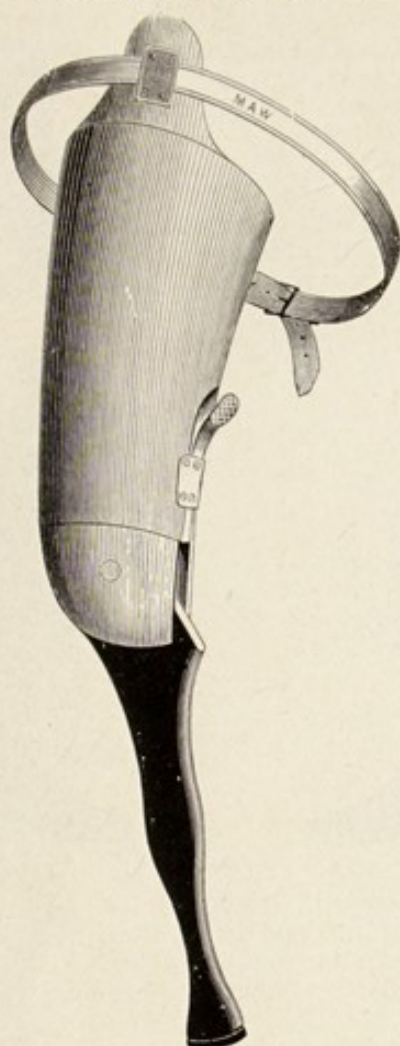

03680-81

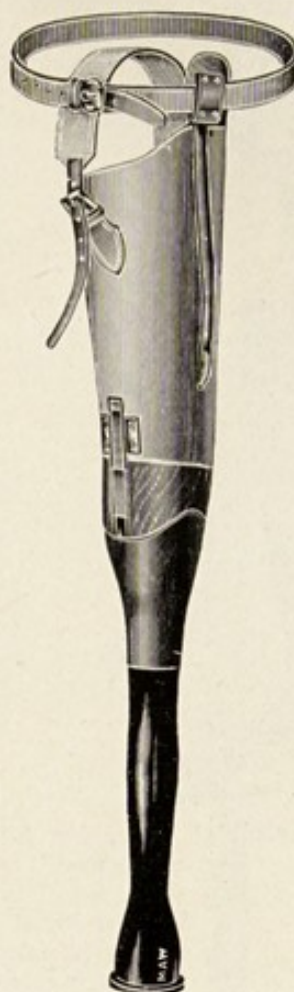

03680	Peg Leg, with leather bucket, suitable for long or medium stump	2	2	0
03681	Do. with wood bucket, suitable for long or medium stump	1	10	0
Average weight, 2½ lbs.

Elastic Hosiery, etc.—

It is desired to call special attention to the registered trade marks which distinguish S. Maw, Son & Sons' two brands of Hosiery. The super quality is known as the "Orion" Brand, and the ordinary quality as the "Vega" Brand, and all goods are marked with a facsimile of one or other of the accompanying designs.

The Brand required must be definitely stated when ordering.

Anklet.

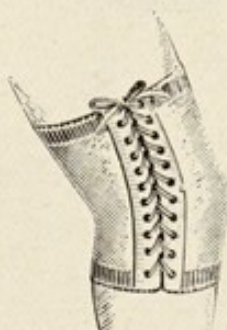

Elbow Cap.

Knee Leggings.

DIRECTIONS FOR MEASUREMENTS FOR ELASTIC HOSIERY.

In all cases the exact measurements of the limb taken next to the skin must be sent. The necessary allowance will be made for expansion. Measurements should be taken on first rising in the morning, as the limb is then in its most natural condition.

Anklelets.

Circumference at E, S, N and T.
Length from E to H and T to X along dotted line.

Knee Caps.

Circumference at A, B, and C.
Length from A to B and B to C along dotted line.

Elbow Caps.

Circumference above, across, and below elbow joint.
Length from top measurement to centre of elbow, and from centre of elbow to bottom measurement.

Knee Leggings.

Circumference at A, B, C, D, and E.
Length from A to C and C to E along side of leg.

Knee Stockings.

Circumference at A, B, C, D, E, S, N, and T.
Length from A to C, C to H, along side of leg, and T to X, along dotted line.

Leggings.

Circumference at C, D, and E.
Length from C to E, along dotted line.

Stockings.

Circumference at C, D, E, S, N, and T.
Length from C to H and T to X along dotted line.

Thigh Knee Caps.

Circumference at O, A, B, and C.
Length from O to A, A to B, and B to C, along dotted line.

Thigh Leggings.

Circumference at O, A, B, C, D, and E.
Length from O to A, A to C, and C to E, along side of leg.

Thigh Pieces.

Circumference at O and A.
Length from O to A along dotted line.

Thigh Stockings.

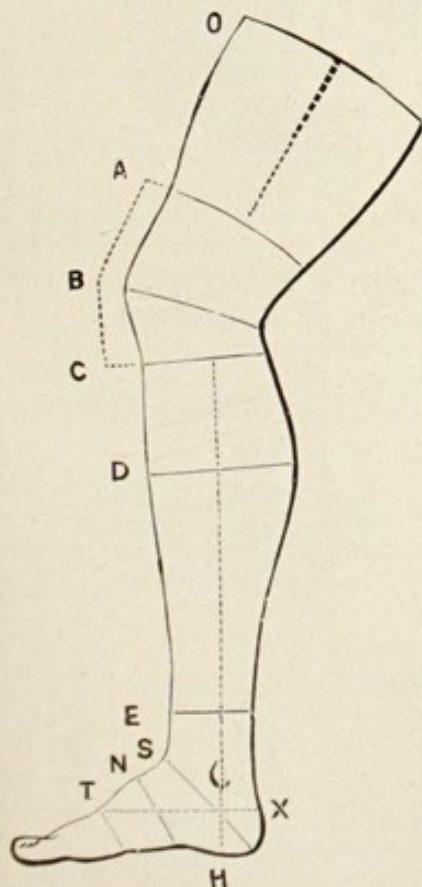

Circumference at O, A, B, C, D, E, S, N, and T.
Length from O to A, A to C, C to H, and T to X, along dotted lines.

Wristlets.

Circumference over bony prominences of wrist and 3 in. above.

Wristlet-Mittens.

Circumference over broadest part of hand excluding thumb.
Circumference round base of thumb.
Circumference over bony prominences of wrist, and 3 in. above.
State for which hand required, right or left.

04308	16	17		12	6	7 $\frac{3}{4}$	26	8	5	6	0

Any capacity or voltage made to order at a few days' notice.

These Accumulators are always sent out filled and charged unless specially ordered to the contrary, as it is of the greatest importance that the first charging be very carefully done.

Accumulator, with detachable rheostat and patent unspillable celluloid cells which will retain their capacity for several months when lying idle in a fully charged condition, in polished walnut cases with leather carrying strap. The cells are detachable and can be easily removed from the case and used for any other purpose, or in the event of breakage can be readily replaced by the owner without having to return the whole apparatus to the maker.

04310

		£	s.	d.
04309	For Cautery Work, 4 volt, 20 a.h., capable of rendering incandescent any cautery points taking from 4 to 15 amperes ..	4	19	6
04310	For Cautery and Electric Surgical Lamps combined, 8 volt, 10 a.h., with patent automatic commutator.. ..	6	12	6
	Dimensions, 4 $\frac{1}{2}$ in. by 5 $\frac{1}{2}$ in. by 6 $\frac{1}{2}$ in. Weight, 10 lbs.			

By inserting the plug for cautery the voltage is reduced to 4, whilst the capacity is at the same time doubled to 20 a.h.

04316	Resistance, 4 volt, for use with motor-car accumulator for cautery work	1	1	0

Cautery and Electric Light Bichromate Battery, for use with platinum cautery points, etc.—

04317

The acid for use in this Battery is made by dissolving 1 lb. of bichromate of potash in a gallon of warm water, and slowly adding 2½ lbs. of strong sulphuric acid, gently stirring all the while. Whilst still hot, 4 ozs. of bisulphate of mercury must be added to the solution.

When the central switch is pushed over towards the word "Cautery," the glass cells in the battery are connected "parallel," and can be used for heating loops, snares, platinum knives and porcelain burners, etc., and when pushed towards the word "Light," they are connected in "series," and can be used for the various forms of surgical lights.

When not in use, the cells of the battery should always be lowered from the plates by lowering the lever at the side of the case.

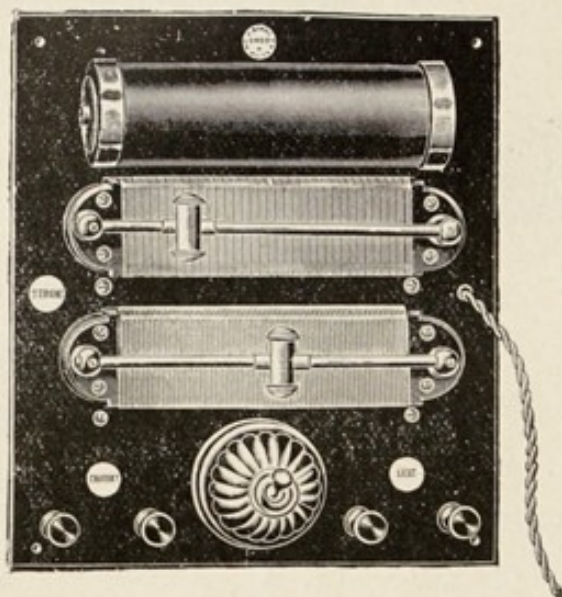

The battery cells should be thoroughly cleaned out each time before fresh acid is poured in, or at least once in every four months, whether in use or not.

04317	Battery as above, with 6 glass cells, in oak case	6	15	0

04595	"Emergency" Tins, large size each	0	3	9
04596	Do. do., small size „	0	2	6

£ s. d.

The "Emergency" tins are of handsome appearance, being enamelled a dark green colour with the name of the dressing in gilt letters upon the front. The dressings are wound upon rollers which revolve in slots at either end of the tin, and when required for use all that is necessary is to pull out the free end and cut off the required amount of dressing with a pair of scissors; it is unnecessary to remove the tin from the cabinet.

The side wings attached to the front of the tins effectually prevent the entrance of dust and dirt when the fronts are closed.

Maw's Improved High-Pressure Steam Steriliser, for Dressings (Reg. No. 585,039).

The two great objections to the ordinary form of High-Pressure Steriliser have hitherto been the long time taken in getting up the necessary pressure—usually about forty-five minutes—and the superfluous steam which is blown off from the safety valve after the pressure has been reached. In Maw's Improved High-Pressure Steriliser (Reg. No. 585039) both these objections are overcome. By means of a specially constructed bottom plate, the full pressure of 5 lbs. can be obtained in seventeen minutes, and by a device fitted to the supply pipe, the gas flame is automatically cut down to a mere spark as soon as the necessary pressure has been obtained, only to rise up again as soon as the pressure begins to fall. By this means no superfluous steam is generated.

DIRECTIONS FOR USE:—

Fill the Steriliser with warm water at the funnel, until it rises fully half-way up the gauge glass, and light the gas. When the pressure gauge F registers 5 lbs. per sq. in. the side tap D should be opened for a few seconds, so as to draw out any moisture from the interior. The tap D should then be closed and the kettle containing the dressings placed in the Steriliser. Sterilisation should be continued for 20-30 minutes. Then gas should be turned out, and the side tap D opened to draw off steam. The tap should then be closed and the kettle allowed to remain in the Steriliser for about 10-15 minutes.

Steriliser for Dressings, Towels, etc., Maw's Improved, constructed of enamelled iron with copper interior and brass fittings and furnished with one deep nickel-plated copper drum—

04822-23

04822	Internal dimensions, 19 in. by 10 in.	12	18	6
04823	Do. do. 19 in. by 12 in.	18	7	6

The new automatic control can be adapted for use with a strong petroleum burner at an additional cost of 45/-, including the Lamp.

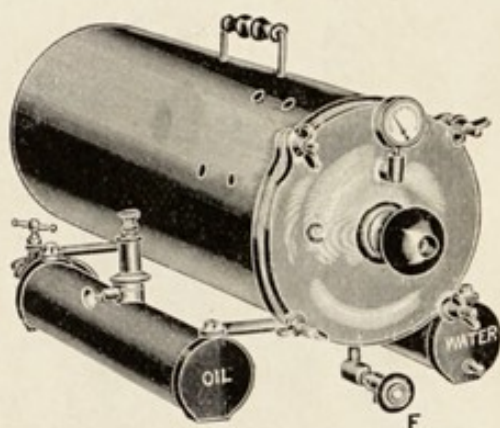

Sterilisation Apparatus—Contd.—

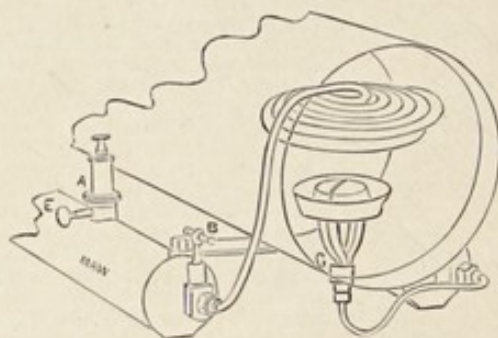

04825

No.	Kettles, nickel-plated, copper, for use with Sterilisers Nos. 04822-23	£	s.	d.
04824	Shallow series, of such a depth that each steriliser will hold 4 10 in., 15/- ; 12 in.	0	19	6
04825	Deep series, of such a depth that each steriliser will hold 2 10 in., 18/6 ; 12 in.	1	2	6

In the above Kettles the sliding blind is removable for cleaning.

04826

Plan of heating apparatus.

04826	Steriliser for Dressings, Towels, etc., Maw's "Portable" (patent), complete with oil and water tanks, pressure gauge and brass fittings	7	10	0
	Internal dimensions of cylinder, 11 in. × 5½ in.			
	Weight, 26 lbs.			

Can be fitted with bunsen burner for gas at the same price.

This steriliser has been designed with a view to enable the operator to sterilise his dressings, etc., on the spot, immediately before the operation. Weighing only 26 lbs., it can readily be carried from place to place. The tanks hold sufficient oil and water for 6 or 8 sterilisations, and as all joints and connections are absolutely tight there is no possibility of any leakage or mess. The steam is produced by means of a superheated coil of steel piping, through which water is forced under pressure. Even if the water tank runs dry no harm will result—there is no bottom to burn out as in an ordinary steriliser. The body of the apparatus is constructed of enamelled iron, and the interior cylinder of copper.

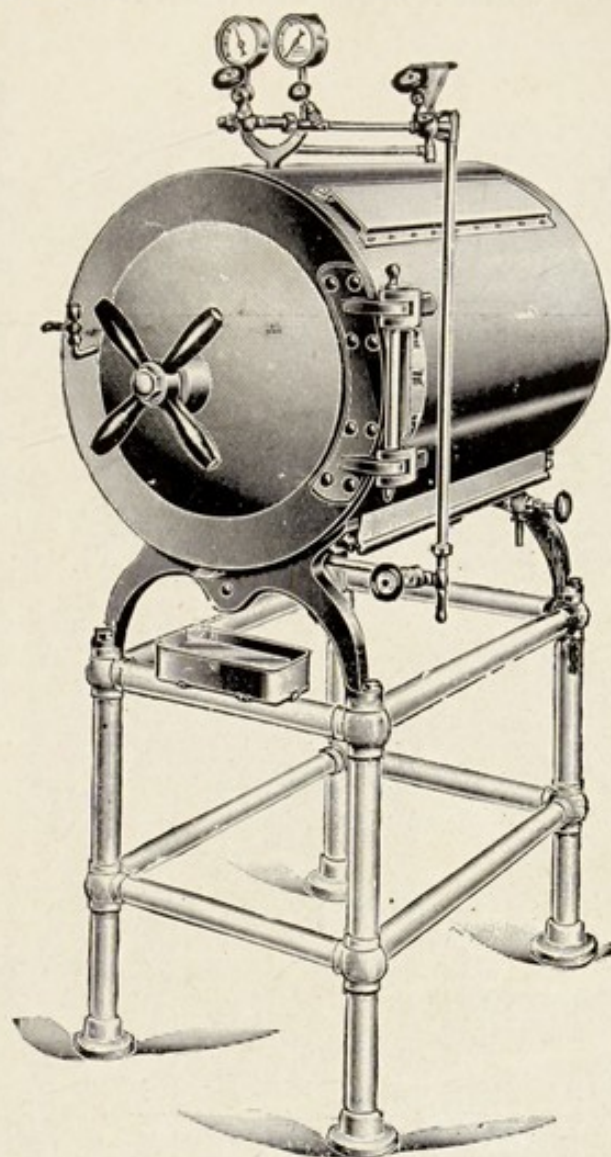

Directions for use are sent out with each apparatus. Practical demonstration given in London district free of charge.

Perforated kettles can be supplied if required at an additional cost of 16/6 each.

For other Sterilisers see "Addenda."

Sterilisation Apparatus—Contd.—

04827-29

No Steriliser for Dressings, Towels, Overalls, etc.—

£ s. d.

High-Pressure Steam Steriliser, horizontal model, with steel outer jacket lined with asbestos, copper inner jacket and gun-metal door and fittings, water gauge, air filter, pressure gauge and vacuum gauge and mounted on aluminium-painted tubular iron stand—

04827	Internal diameter, 24 in. × 12 in.	42	0	0
04828	Do. do. 27 in. × 14 in.	57	10	0
04829	Do. do. 30-in. × 16 in.	75	0	0

If outer jacket and fittings are required to be nickel-plated there will be an extra charge of £2 10 0, £3 0 0, and £3 10 0, for each size respectively.

This form of steriliser is so adjusted that a pressure of 15 lbs. per square inch is obtainable on a temperature of 250° Fah. It can be made either for heating by gas (the burner being included in the price) or with connections to connect up to the steam supply of a hospital.

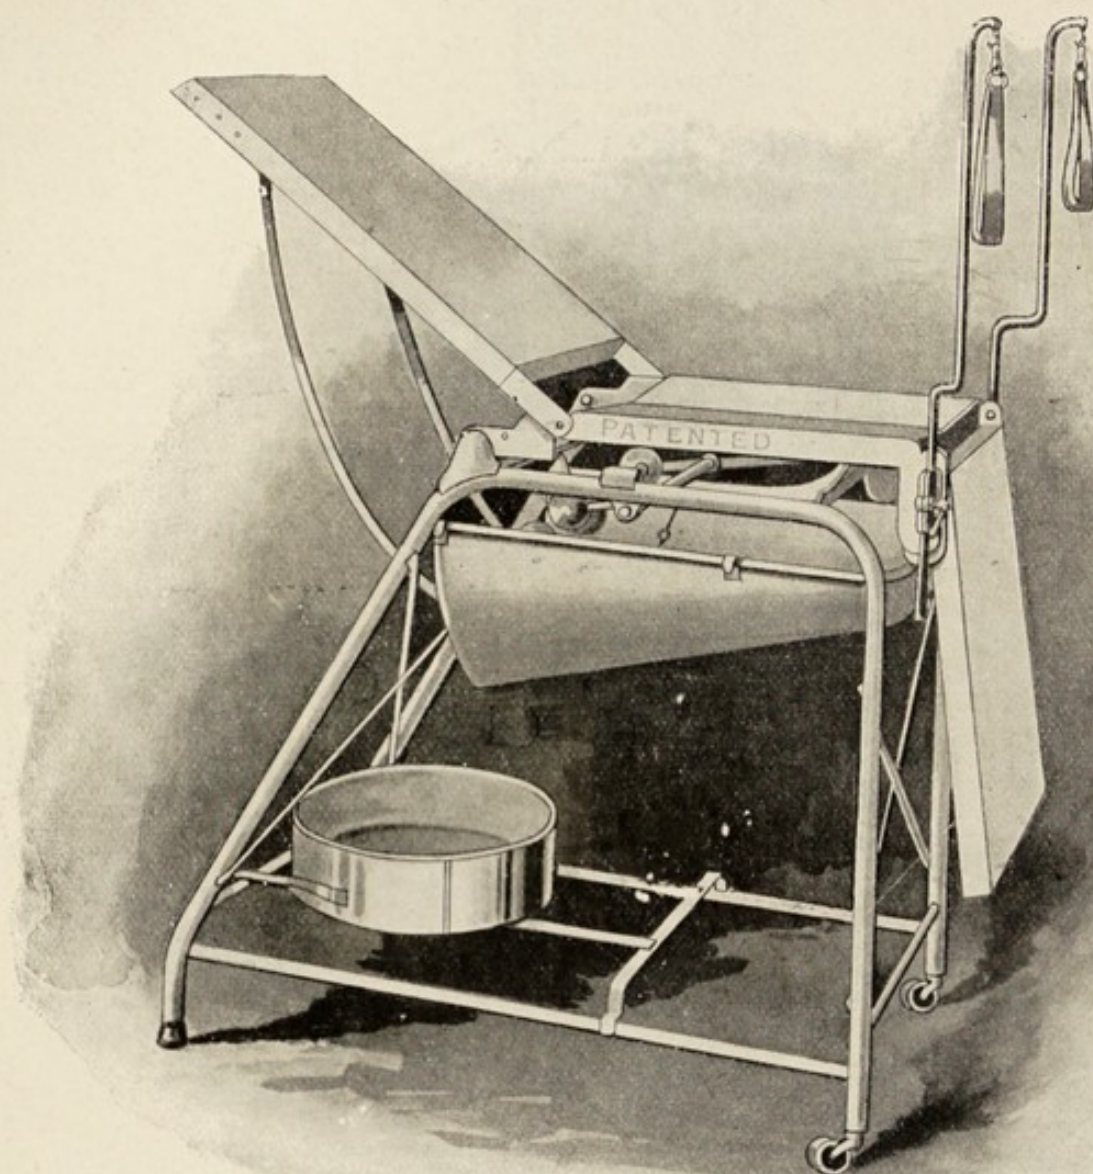

Estimates given for larger sizes if required.

S. MAW, SON & SONS.

OPERATION TABLES.

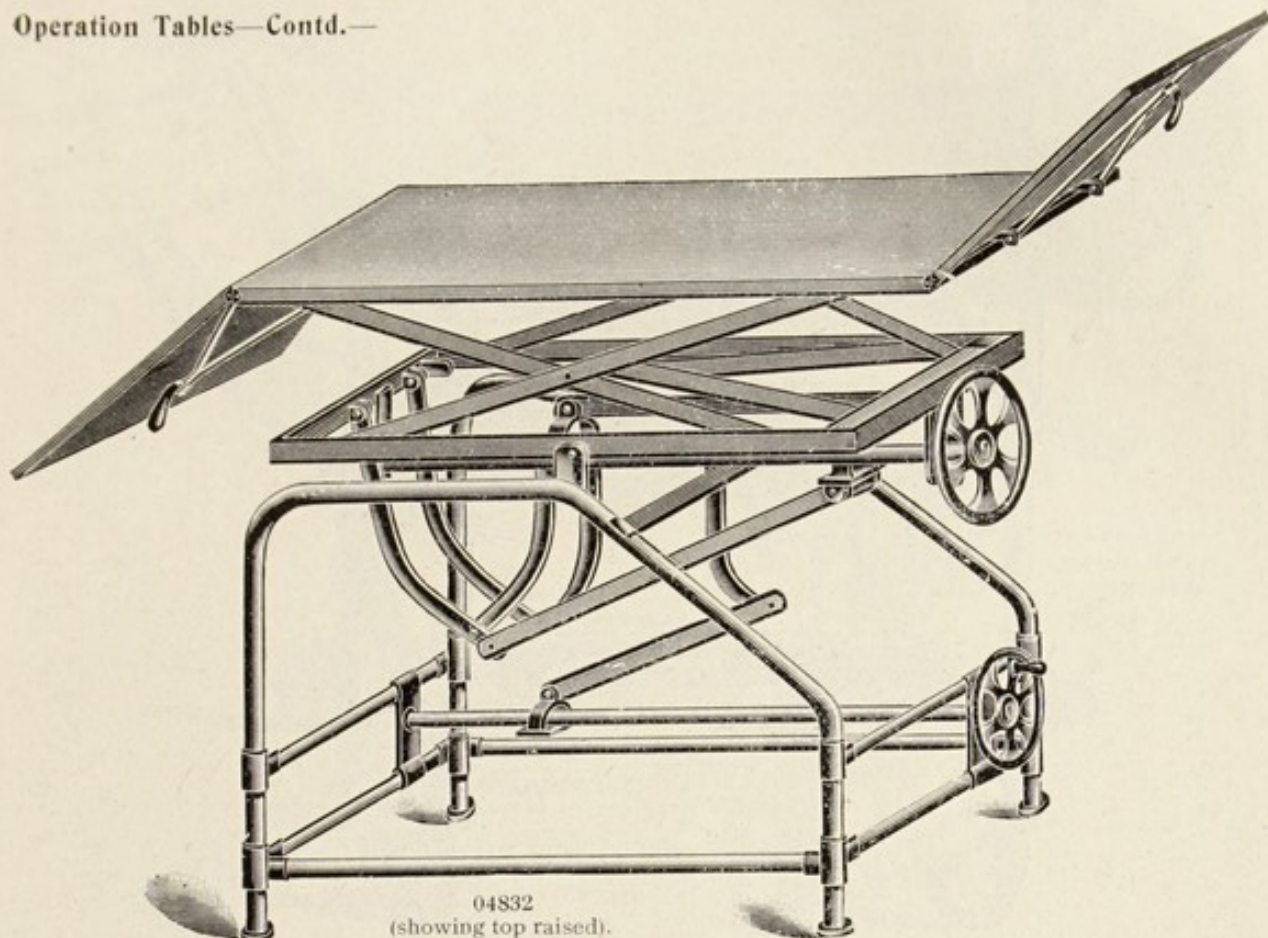

04830

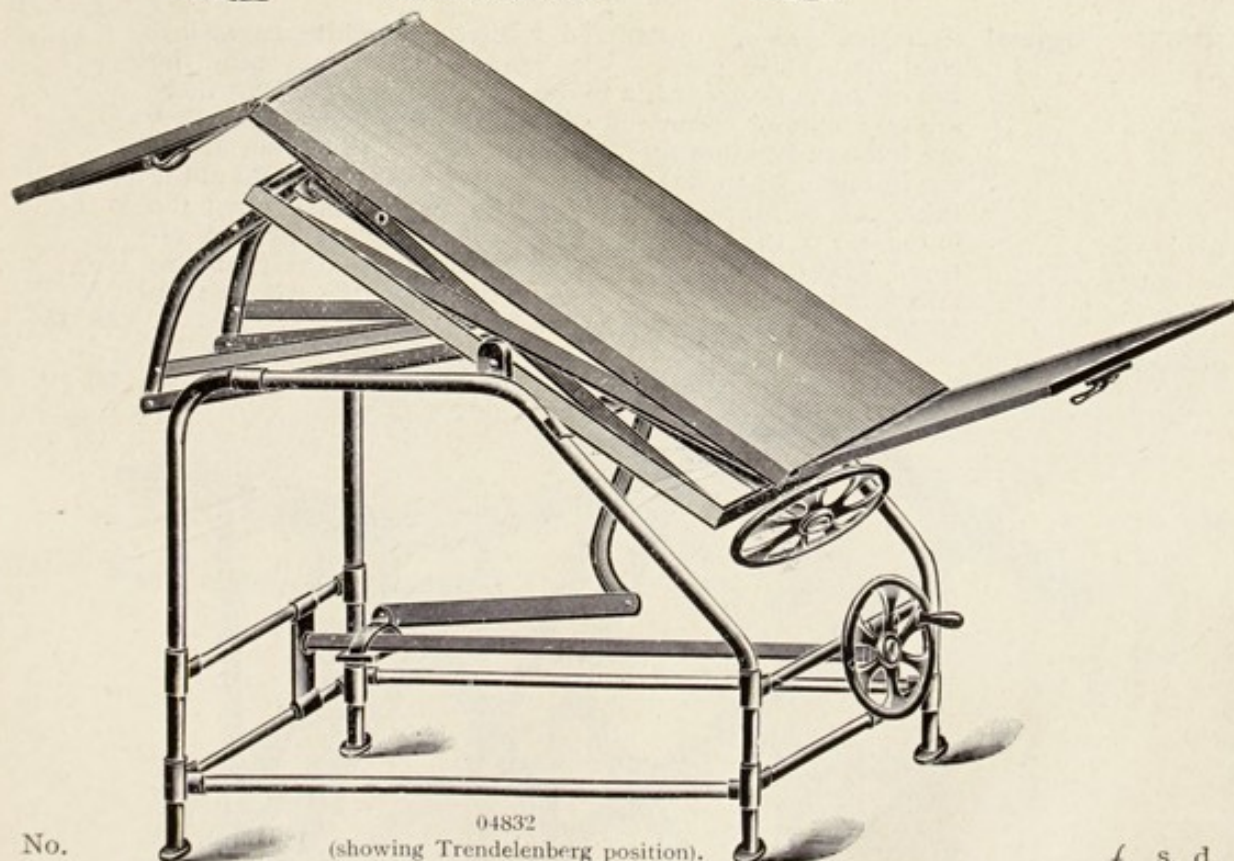

No.	General Operation Table and Chair combined—	£	s.	d.
04830	This is one of the most simple and convenient forms of table that has ever been brought to the notice of the surgical profession. It consists of a tubular steel frame with steel top, enamelled white throughout. By means of ratchets which are automatically locked by counter balance weights, the patient can be placed in every possible position with the greatest ease and comfort. The foot flap is readily detachable so as to give the surgeon a closer and more comfortable position when operating on gynæcological or lithotomy cases. The head flap can be adjusted to various angles. The total height of the table is 34 ins.; the frame is 22 ins. wide, and the length of the top when extended 67 ins.	15	0	0
04831	Shoulder Rests, with sockets, extra per pair	1	10	0

Operation Tables—Contd.—

04832

Operation Tables—Contd.—

No.
04833

General Operation Table, constructed entirely of white enamelled steel and plate glass. The glass slabs which form the top of the table are made to overlap the frames so that there are no angles or corners in which dust may collect, and they are fixed in position by studs projecting from the surface of the frames. By means of a screw movement the height of the table can be altered at will, and by another movement the lower end of the table may be placed in any degree of elevation. It is provided with Victor Horsley's head rest, and an arrangement of levers by means of which the wheels may be locked or unlocked as desired

EXTRACT FROM "LANCET," MARCH 7, 1903.
 "The Portable Operating Table shown in the accompanying illustration is a modification of that suggested by Mr. Jordan Lloyd. Two legs are added under the head, which are united to the upper ends of the ordinary legs by strong hinges and to one another below by a cross piece. These can be fixed at the required angle to the ordinary legs by means of an adjustable support, one on each side. All that is necessary to place a patient in the Trendelenberg position is—first, to fix the extra legs at the necessary angle; secondly, to slide in the support for the foot flap and to drop it; and thirdly, to tilt the table backwards and place an ordinary wooden chair under the cross-piece connecting the legs at its foot. The table as described above has been strongly and neatly made for me by Messrs. S. MAW, SON & SONS, of Aldersgate Street, London, E.C.

"BRIGHTON.

"ARTHUR H. BUCK, F.R.C.S. Edin.,
 "Surgeon, Sussex County Hospital, etc."

 04936 **Lotion Jars**, glass, with outside fitting lids, lettered in red, and fitted with india-rubber bung, glass connecting tube, 3 ft. of india-rubber tubing, and pinch-cock, 4 sizes.
 1 gal., 14/3 ; 2 gal., 20/3 ; 3 gal., 26/9 ; 4 gal. 1 9 3

The jar at the right-hand side of the engraving shows the method of fitting. It will be observed that the opening of the bent glass tubing which pierces the bung is situated at some little distance from the bottom of the vessel. The reason of this is to prevent any sediment which might happen to collect at the bottom from being drawn off with the lotion. The object of turning the vessels with the bung to the wall is to prevent a nurse from tilting them in order to obtain lotion when they are nearly empty.

04998	Hand Stretcher, Army regulation model, with 1½-in. ash poles..	3	0	0
04999	Do. do. do. "B" quality, with webbing sling straps	2	0	0

The canvas is fastened to the poles by copper nails driven through an edging of leather. The poles are square, except at the handles, and are kept apart the required distance by two jointed wrought-iron galvanised bars, which, when in position, are made to lock so that they cannot become accidentally closed at an inopportune moment. Four brackets are fitted to the under surface of the poles carrying 3-in. rollers, by means of which the stretcher may be wheeled along the floor of an ambulance waggon. A pair of leather shoulder slings, which also serve the purpose of confining the package when not in use, are provided with the stretcher.

05025

Wagon, for conveying dinners, etc., to the wards of a hospital, constructed of specially planished steel, which will not rust, and fitted with copper hot water tanks, removable shelves and under-carriage, with rubber-tyred wheels, and springs . . .

The use of a wagon of this description saves the labour of carrying the dinners by hand through the various wards, and at the same time enables the meat, soup, vegetables, etc., to be kept hot whilst the patients are being served. When not in use it can be lifted off the under-carriage, and the latter can then be used for other purposes, such as collecting dirty linen from the various wards or for delivery of coal, etc. It is made of such a size that it will easily go into any lift which will take an ordinary stretcher.

SURGICAL GLASSWARE, Etc.

05111-12

05113

No.

Bowls, Lotion, white glass with coloured rim—

			6 in.	8 in.	9½ in.	11 in.	12 in.
05111	Blue, green or amber rim	each	3/9	5/6	7/6	9/6	11/-
05112	Ruby rim	„	4/-	6/-	8/6	11/-	12/6

The above Bowls with coloured rims are found to be of great service in hospital theatres where several different colourless solutions are often in use at the same time. By always keeping the same colour of bowl for one particular lotion, the surgeon can see at once what he is using, and mistakes are thus often avoided.

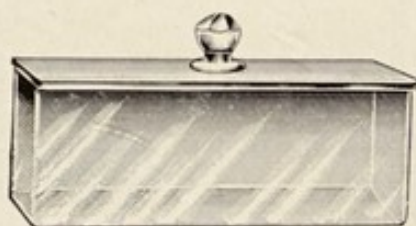

05113	Bowls, Lotion, in plain white glass, with polished rim,						
		each, 4 in., -/7; 6 in., -/8; 8 in., 1/3; 10 in., 1/4; 12 in., 2/-

05216	Clock, Sick-room, with electric projecting device, for sick-room ..		1	10	0

A—This illustration shows the ceiling clock in operation. By means of a very novel and ingenious contrivance the time is projected (very largely magnified) on to the ceiling. Thus, on waking up at night, by merely pressing a button, a very plain reflection of dial of clock is seen on the ceiling without any dazzling effect.

05448-51

No.	Steriliser, High-Pressure Steam for Dressings, constructed of enamelled iron with copper interior and fitted with bunsen burner for gas and one kettle—						£	s.	d.
05448	No. 2, 19 in. by 10 in.	13	12	6
05449	No. 3, 19½ in. by 12 in.	18	0	0
05450	No. 4, 19½ in. by 14 in.	21	12	6
05451	No. 5, 24½ in. by 16 in.	26	15	0

The above measurements are the internal dimensions of the cylinder.

Kettles, copper, nickel plated, for use with the above (for illustration see page 552)—

05452	Shallow series (four to each steriliser)—								
	Each, No. 2, 15/0; No. 3, 19/6; No. 4, 22/6; No. 5..						1	13	0
05453	Deep series (two to each cylinder)—								
	Each, No. 2, 18/6; No. 3, 22/6; No. 4, 27/0; No. 5 ..						1	19	0

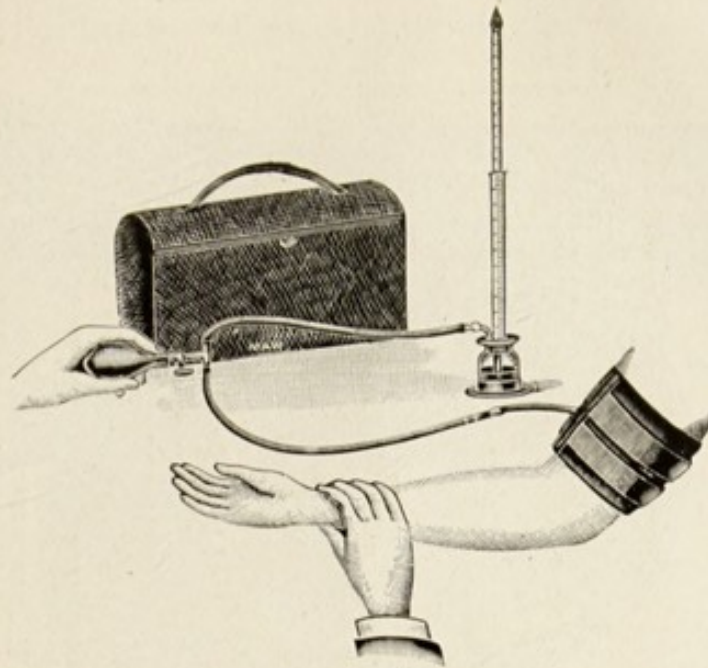

This Steriliser is tested up to a pressure of 10 lbs. to the square inch, but the regulator is so constructed that the safety valve will blow off with a maximum of 5 lbs. pressure.

It can be supplied with a powerful petroleum burner, in place of gas burner, at an additional cost of 9/0. Working instructions are sent out with each apparatus.

For prices of Maw's Improved High-Pressure Steam Steriliser see page 551.
