## BOROUGH OF ASHTON-UNDER-LYNE.

# ANNUAL REPORT

OF THE

## Medical Officer of Health,

FOR THE YEAR

St 1926: →

BY

JOHN WM. TALENT, M.D., M.R.C.S., D.P.H.,

MEDICAL OFFICER OF HEALTH, SCHOOL MEDICAL OFFICER,

- AND -

MEDICAL SUPERINTENDENT
TO THE INFECTIOUS DISEASES HOSPITAL.

THE PUBLIC HEALTH OFFICE,

TOWN HALL CHAMBERS,

ASHTON-UNDER-LYNE,

April, 1927.

To the Mayor and Council of the

Municipal Borough of Ashton-under-Lyne.

Ladies and Gentlemen,

I beg to submit for your consideration the Annual Report on the health of the Borough and on the work of the Public Health Department, for the year 1926.

This is an "Ordinary Report," and is carried out in accordance with the instructions of Circular 540 of the Ministry of Health.

I am glad to take this opportunity of thanking Mr. Morris and each member of the Staff, for their excellent work and support during the year.

I am,

Yours obediently,

JOHN WILLIAM TALENT.

# Ordinary Report.

## (1) General Statistics:-

Area (in Acres)	1,345
Population (Census 1921)	44,200
Number of Inhabited Houses (1921)	10,436
Number of families or separate occupiers (1921	) 10,384
Rateable Value£	237,319
Sum represented by a penny rate	£905

## (2) Vital Statistics:

Births.—During the year 722 Births were registered (385 males and 337 females).

The general Birth Rate was 16.7. The average for the past 10 years being 18.7.

BIRTH RATE IN WARDS FOR 1926.

St. Peter's.	Portland.	Market.	St. Michael's.
225	155	251	86
15.8	16.4	17.4	13.4
	225		225 155 251

**Deaths.**—The number of deaths registered was 629 (328 males, 301 females).

The Death Rate was 14.6, the average for the past 10 years was 15.3.

The number of women dying in, or in consequence of childbirth, was 1.

The deaths of infants under one year of age numbered 74. Of these, 6 were illegitimate. This gives an Infant Death Rate of 102 per 1,000 Births, the average for the past 10 years being 100.8.

Deaths	from	Measles (all ages)	12
"	,,	Whooping Cough (all ages)	3
33	,,	Diarrhœa (under 2 years of age)	11

There was no unusual or excessive mortality during the year.

Persons admitted to Lake Hospital and Darnton House from the Township of Ashton during the year ended December 31st, 1926:—

	Men.	Women.	Children.	Total.
Lake Hospital	433	219	110	762

## Causes of Sickness-Measles.

Previous Year...

An outbreak of Measles occurred in the town during the period December, 1925, to March, 1926. The School Nurse and Health Visitors immediately undertook the visiting of the houses where infection took place. The total number of

children visited was 424, of whom 128 were under school age. A ward at the Borough Hospital was set aside for the reception of cases where the home conditions were unsuitable owing to overcrowding, severe complications, poverty, &c. Several of the cases visited were complicated by Bronchitis and Prieumonia. In many cases convalescence was retarded by poverty, resulting in poor nutritition and lack of good hygienic surroundings.

## Chicken-pox.

Simultaneously with the Measles epidemic there was also an outbreak of Chicken-pox. 230 cases were reported. No deaths occurred.

#### Cancer.

Cancer accounted for 47 deaths. Of these, 24 were males, 23 females. The ages at which they occurred were:—

Years	2—5	45—65	65 and upwards
Deaths	1	31	15

They were distributed as follows:-

Ward .. Peter's. Portland. Market. Michael's. Workhouse, Infirmary. Deaths.. 11 - 3 11 4 11 7

A special leaflet of advice on Cancer has been issued. This was distributed by the Health Visitors in their districts and at the Welfare Centres. It was also printed in the two local newspapers and excited considerable interest and attention.

## (5) Summary of Nursing Arrangements, Hospitals, and other Institutions available for the District.

## Professional Nursing in the Home.

General. The District Nursing Association provides three Nurses for general nursing.

An arrangement has been made between the Health Committee and this Association by which the latter undertake to nurse all notified cases of Pneumonia requiring such service, and the Health Committee to make an annual subscription of £50 to their funds.

During the year 80 cases of Pneumonia have been attended.

## Hospitals provided by the Local Authority:-

(a) The Borough Fever Hospital has 20 beds in two wards.

During the year 49 patients were treated :-

Scarlet Fever	42	Chicken-pox	3
Measles	3	Diphtheria	1

Lotrial view by experience of	Ashton Cases.	Outside Cases.	Total.
Remaining in Hospital, 1st January, 1926	6	1	7
Admitted during the year	37	5	42
Discharged during the year	36	. 4	40
Died during the year	2	0	2
Remaining in Hospital, 1st January, 1927	6	1	7

Districts from	which Outside	Cases	were	received:-
	Stalybridge.			2

Hurst ..... 2

Charlesworth ..... 1

A five-valve Wireless Set has been presented to the Hospital by Councillor Bowden and is greatly appreciated by the patients.

- (b) Hartshead Joint Board Hospital for Smallpox. Ashton is one of the constituent Authorities. It provides 12 beds.
- (c) Lake Hospital (Poor Law). Subsidised for reception of normal maternity cases, under the Council Scheme. Four beds are retained.
- (d) District Infirmary. Subsidised for reception of difficult Maternity cases and Puerperal cases under the Council Scheme.

#### Ambulance Facilities :-

- (a) For infectious cases, a motor and horse ambulance.
- (b) For non-infectious and accident cases, two motor ambulances.

#### Clinics and Treatment Centres :-

Maternity and Child Welfare Centres.

- 1. Enville House, Scotland Street, is a large dwelling-house, which has been adapted for the purpose of consultation. It is leased by the Maternity and Child Welfare Committee.
- 2. Richmond House, Richmond Street. This large dwellinghouse was purchased by the Council, and is similarly used for consultations.

# Report upon Maternity and Child Welfare Work. Ante-Natal.

Expectant mothers are visited, as far as possible, monthly in their homes by the health visitors. Advice is given and enquiries made as to general home circumstances and arrangements for the confinement.

Classes are held at Enville House, on Wednesday afternoons, and at Richmond House on Thursday afternoons, at which expectant mothers are invited to attend. Any one wishing to consult the Medical Officer may see him at the usual consultations at the Welfare Centres.

Arrangements have been made with the Borough Council whereby expectant mothers may be confined at the Lake Hospital, fees to be paid in part by the Borough Council and the remainder by the mother, according to her financial position. The usual charge made being one-half, viz.:—three guineas.

Difficult confinements occurring in the patient's own home may be transferred to the District Infirmary.

Those desirous of obtaining special nourishment in the form of dried milk or virol may obtain it from the Welfare Centres, subject to the usual conditions.

A supply of sterilized Maternity Outfits is now kept in stock for the benefit of mothers confined in their own homes. Application is to be made at the Health Office through the midwife in charge of the case. The outfits are sold in two sizes, viz.:—3/6 and 6/6.

The Public Health (Notification of Puerperal Fever and Puerperal Pyrexia) Regulations, and the Public Health (Ophthalmia Neonatorum) Regulations, 1926, came into force on 1st October.

With regard to the facilities for treatment which are suggested in the Memorandum, the Council already have in operation an arrangement with the Pathological Laboratory of the District Infirmary under which any required bacteriological examination can be made, also an arrangement with the District Infirmary to receive any case of Puerperal Fever which needs hospital treatment. With reference to Ophthalmia Neonatorum, the two Health Visitors are fully qualified, being trained nurses, to undertake the nursing of such patients in

their homes. Any case needing institutional treatment may be sent to the District Infirmary.

#### Home Visiting.

All notified births are visited by the Health Visitors as soon as possible after the expiration of first ten days.

Subsequent visits vary according to the health of the child, the home conditions, and the attendance of the mother at the Welfare Centre.

When illness occurs amongst either the mothers or children the home is visited and medical advice recommended unless it has been previously sought.

A District Nurse attends daily where her services are necessary. Should circumstances arise to make it advisable, patients may be removed to the District Infirmary or the Lake Hospital. All still-births and infant deaths are enquired into and reported on by the Health Visitors.

Unmarried mothers are visited, advised and assisted as may be deemed necessary for the rearing of their children, wherever possible the mother herself remaining in charge of her child.

#### Welfare Centres.

The Welfare Centres are situated at Richmond House, Richmond Street, for the west end of the town, and at Enville House, Scotland Street, for the east end. During the year electric lighting has been installed at the Enville House Centre. Richmond House is open on Mondays, 9 to 12 a.m. for the purpose of weighing babies, medical consultations, and the sale of food, and on Thursdays, 2-0 to 4-0 p.m. for health talks, cookery classes, dressmaking, &c. Enville House is open for corresponding purposes on Tuesdays, 2 to 4 p.m., and on Wednesdays, 2-30 to 4-0 p.m.

#### Sale of Food,

Food stuffs sold at the Centres include Glaxo, Cow and Gate, Virol, Cod Liver Oil, and Olive Oil. The conditions

governing the sale of them to the mothers are, regular attendance and weighing of the baby at least once a month, exception being made in cases of illness, and the sanction of the Medical Officer.

At Richmond House there is a special section for the sale of childrens' knitted garments and materials designed to suit all ages up to five years. These are obtained direct from London and are forwarded for the benefit of Welfare mothers only. Special forms of application for a free supply of dried milk are issued to necessitous cases, who, if found to be in receipt of an income below a certain scale, are allowed a temporary supply free, subject to the conditions regulating the usual distribution of food.

### Voluntary Help.

A number of voluntary workers help at the Welfare Centres, chiefly in connection with classes for tuition in housewifery, dressmaking, &c. They also assist in the organization of an annual Xmas party, summer outing, and afternoon teafor the mothers attending the Wednesday and Thursday afternoon sessions.

## Massage.

Massage Clinics for the treatment of rickets and muscular deficiencies are held at each Centre twice weekly. A fully qualified Masseuse attends, the children are given a cupful of hot milk immediately after treatment and the mothers are instructed to carry out the rubbing movements at home. Each child is expected to take cod liver oil.

The following is a brief summary of the year's work :-

No. o Clinics H		No. of Child Treated.		Attendances made.
172		57		937
The following	gives the a	ges of the ch	ildren treat	ted :-
The following 1st year.		ges of the ch 3rd year.	ildren treat	ted :— 5th year.

The nature of the complaints treated were :-

Torticollis. Rickets, Knock-knee. Bowlegs. Malnutrition. Fracture.

1 11 5 10 29 1

Artificial sunlight lamps are installed at the District Infirmary, where advanced cases of Rickets and Malnutrition may receive treatment. By arrangement with the Council, children certified by the Medical Officer as requiring artificial sunlight, and attending at either Welfare Centre, are treated free of all cost to the parent.

#### Infectious Disease.

Cases of Measles, Whooping-Cough, and epidemic Diarrhœa are visited, advised as to treatment and the mothers requested to call in a Medical Practitioner where it is necessary, unless they have already done so. Special instructions are given concerning the isolation of the patient.

During the Measles epidemic, December 1925—March 1926, a ward at the Borough Hospital was set aside for the reception of those cases where homes were unsuitable.

## Ophthalmia Neonatorum.

Infants suffering from Ophthalmia Neonatorum are visited daily by the Health Visitor, who treats the child's eyes according to the doctor's orders, and instructs the mother in the carrying out of the same until a cure has been effected.

The following table shows the number and character of cases which occurred throughout the year:—

		ated	Vision.	Vision	Total	*
Notified.	At Home.	In Hospital.	Unimpaired.	Impaired.	Blindness.	Deaths.
6	6	0	6	0	0	0

The following is a summary of the work performed by the Health Visitors:—

Visits to Infants under 1 year264	6
Visits to Children aged 1-5 years209	
Visits to Expectant Mothers 31	
Miscellaneous enquiries 73	
Visits to Infectious Cases 58	

Total.....6375

#### Record of Attendances at Centres:-

Weighings	44	136
G14-4:	(Expectant Mothers	112
Consultations	Expectant Mothers	765
Cookery Class	e	339
Sewing and K	nitting Classes 1	121
Expectant Mo	thers' Class 2	238
Children at Le	ectures19	980

During the year 1,979 lbs. of Dried Milk were given free to necessitous cases of children, expectant and nursing mothers.

#### School.

On entering school, each child's record card, which has been kept by the Health Visitor, also the medical card from the Welfare Centre, are forwarded to the school authorities for reference.

The Medical Officer of Health who attends the consultations at the Centres is also the School Medical Officer.

## Objects and Education.

Throughout the entire working of the Maternity and Child Welfare Scheme the main object kept in view is the education of the public in the principles of maintaining sound health and preventing disease. This is done chiefly by instructing the mothers while the children are still young, and whenever possible, before the birth of the child, as it is realized that the earlier these principles are taught and practised the more ill health may be averted. An effort is also made to impress upon the fathers that they, as well as the mothers are responsible for the general health and well-being of the next generation.

Not only is impressed upon the parents the responsibility of building up the child's physical constitution that it may be as sound as possible, but it is remembered that mental and moral well-being are of equal, indeed of greater importance than that of the body.

Opportunity is taken, therefore, of showing the parents how to inculcate in the child, habits of self-control, self-respect and self-discipline. The education of the parents especially of the mothers, is carried out partly by means of lectures and classes given collectively at the Welfare Centres, but chiefly by individual talks, either by the Medical Officer at the consultations or by the Superintendent Nurse and Health Visitors in the homes of the people.

#### School Clinic :-

Water Street. Is held in roomy and convenient premises belonging to the Council.

### Tuberculosis Dispensary:-

Warrington Street. Is under the control of the County Authority.

# Report of the Tuberculosis Officer for the Year 1926.

During the year, one-hundred-and-three notifications of patients suffering from Tuberculosis were received. Of these, sixty-six were notified as suffering from Pulmonary Tuberculosis, thirty-three from non-pulmonary Tuberculosis, and four were combined cases.

Of the sixty-six pulmonary cases, twenty-eight were found to have tubercle bacilli in their sputum, nine had negative sputum, sixteen had no expectoration, in four cases the sputum was not examined, and nine cases were in Union Hospital when notified.

In the four combined cases, two were found to have tubercle bacilli in the sputum, and two had no expectoration.

The thirty-three non-pulmonary cases are classified as follows:

Glands1	7	Elbow 2	Abdomen 3
Hip	1	Meninges 2	Genito-urinary 1
Skin	3	Spine and Ribs 1	Metacarpal 2
	Me	tacarpal and Ankle	1

Eighteen of the notified cases of Pulmonary Tuberculosis died during the year. Of the non-pulmonary notified cases, the two cases of Meningitis died during the year.

Eighty-six of the one-hundred-and-three cases applied for treatment. In the remaining seventeen cases, no application was made for the following reasons:—Died immediately after notification (5); diagnosis not confirmed after examination (2): removed from district immediately after notification (1); in Union Hospital when notified (9).

Of the patients who applied for treatment, twenty-two were sent to Sanatoria, ten to Pulmonary Hospital for advanced cases, six to General Hospital for surgical treatment, and five to Observation Hospital. The remaining forty-three cases were under Dispensary Supervision only.

In addition to the notified cases, a large number of patients are sent to the Dispensary by their doctors for examination and diagnosis. During the year, 1926, two-hundred-and-fifty-six new cases were sent for diagnosis by the Doctors, School Medical Officers, etc. The number of re-attendances of old patients at the Dispensary for supervision and arrangements for treatment, was 1,790.

Special enquiries are made as to the health of other inmates of the houses where there are patients suffering from definite Tuberculosis, and forty-three of these contacts were examined during the year.

In supervision and visiting, special attention is paid to the open cases, i.e., cases where tubercle bacilli are present or have been found in the sputum. On the 1st January, 1926, there were one-hundred-and-three such cases known to be living in the Borough. On the 31st December, 1926, there were one-hundred positive cases living. These figures include quiescent and arrested cases.

The number of positive cases living at 31st December, 1926, who had tubercle bacilli in the sputum during 1926, was

forty-five. The other fifty-five cases have had either negative sputum or no sputum.

Of the forty-five cases who had tubercle bacilli in the sputum during 1926, eleven were in institution at the end of the year, twenty-three had separate bedroom, seven had separate bed, and four were unable to have separate bed.

Thirty-four of the positive cases died during the year.

Three positive cases removed from the district during the year.

The condition as to isolation at home of the positive cases was as follows:—

Separate	bedroom	70
Separate	bed	53
Unable to	o have separate bed	14

Fifty-one of the positive cases were in institution for treatment or isolation at some time during the year.

Eighteen housing defects were reported during the year, and of these, five had been remedied by the end of the year.

Two-hundred-and-ninety specimens of sputum, urine, etc., from Ashton-under-Lyne were examined at the Ashton Laboratory during the year. Of these, sixty-nine were positive, and two-hundred-and-twenty-one were negative.

During the twelve months, seventy-five patients were discharged from institutions as follows:

From	Sanatoria	36
	Pulmonary Hospitals for advanced cases	23
	General Hospital for treatment of non-	
	pulmonary Tuberculosis	
	Observation Hospital	7
The	results on discharge were as follows :-	
	Quiescent or arrested	12
	Improved	27
	I.s.q	6
	Worse	6
	Died	15
	Diagnosis confirmed (Observation cases).	5
	Diagnosis not confirmed " "	4

During the year 1926, there were three deaths from Tuberculosis where no notification of the disease was received at any time. In one case the disease was pulmonary, and in two cases the disease was non-pulmonary (including one from Meningitis).

#### Treatment Centre for Venereal Diseases :-

This is held at the District Infirmary. It is under the control of the County Authority.

136 new cases were admitted this year, 27 of which were found to be non-venereal.

3,143 attendances were made for consultation and treatment, and the number of "in-patient days" were 233.

651 specimens were examined in the Pathological Department.

The attendances show an increase on the previous year.

Attention is again drawn to the necessity of seeking early treatment in cases of suspected venereal disease. Miss M. Gorman, M.B., is in charge of the Female Clinic, and Dr. J. R. Robertson is the Medical Officer in charge.

124 patients were under treatment or observation at the end of the year,

J. R. ROBERTSON.

# Public Health Officers of the Local Authority.

J. W. Talent, M.D., M.R.C.S., D.P.H.,

Medical Officer of Health.

W. C. Morris, M.I.H., Chief Inspector.

C. Sharples, Assistant Inspector.

H. Bradley, Clerk.

J. Hardman, Drain Inspector.

T. Bickerton, Disinfector.

Mrs. S. Wolfenden, S.R.N., C.M.B., Infant Welfare Supt.

Mrs. Parkinson, S.R.N., C.M.B., General Trained Nurse, Health Visitor.

Miss H. W. Phillips, S.R.N., General and Children's Trained Nurse, C.M.B., Cert. Royal Sanitary Institute, for Health Visiting. Health Visitor.

Miss H. E. Hollis, General Trained Nurse,

Matron of Fever Hospital.

Miss J. N. Mason, Fever Trained Nurse.

Two Probationer Nurses.

All the above are full-time Officials. A contribution is made to the salary of the Medical Officer of Health, Infant Welfare Superintendent, and two Health Visitors.

J. Hall, M.R.C.V.S., Meat Inspector. Part time Official.

#### Midwives:-

There are 17 Midwives practising in the Borough; 3 of these are Bona-Fide, the remaining 14 are qualified by examination. They are under the control of the County Authority.

## Legislation in Force.

## General Adoptive Acts:

- (a) The Infectious Disease (Prevention) Act, 1890. except Part V. thereof
   (b) The Public Health Acts Amendment Act, 1890. Sections 50 and 51.
- (c) The Public Health Acts Amendment Act, 1907.
- (d) The Notification of Births Act, 1907.

#### Local Acts :-

### Bye-Laws:-

## Sanitary Circumstances of the Area.

(a) Closet Accommodation.—There are no privies in the Borough. All dwelling-houses are upon the water carriage system.

Fresh water closets number 3,504, and waste water closets 8,424.

(b) **Scavenging**.—Refuse has been disposed of by tipping at Gambrel Bank and on the Heys Estate. The method adopted is that of the Bradford System.

## (c) Sanitary Inspection.

Full details of this are given in the Report of the Sanitary Inspector, which follows.

## Smoke Abatement.

A report was received from Mr. Harold Jackson, B.Sc., on the deposit of impurities from the air, of which the following is a copy:—

				Depos	it in 1	British to	nsp	er square	mile	
From	Date.	То	Peri	od.		Soluble Matter		Insoluble Matter		Total

	Averag	e total de	eposit	on ea	ch sq	nare	mile da	ilv :	at this r	ate	

Average total deposit on each square mile daily at this rate equals 2.08 tons.

## Premises and Occupations which can be controlled by Byelaws or Regulations.

During the year I have specially inspected the following:

#### Ice Cream Manufactories.

These are nine in number. Two are buildings devoted to this purpose only, the remaining seven are small general shops or houses. In the seven small premises the manufacture is mainly in summer only, and the amount made is small. One of these houses was so insanitary that I recommended its immediate closure for this purpose. Since then the making of ice cream on these particular premises has ceased.

#### Bakehouses.

They are 26 in number, one of them being underground. The premises generally were clean and well kept. The underground bakehouse was not in good order. Moreover, it is unsuitable for the purpose, and when a desirable occasion arises I recommend that it be closed as a bakehouse. The persons employed in baking in these 26 bakehouses number 136, being 40 males and 96 females. I examined the hands of all these employees for the purpose of detecting any cases of Dermatitis, but there were none requiring exclusion for this reason. I particularly impressed upon the foremen that any cases shewing disease of the hands should be at once excluded from the bakehouse and from taking part in any process connected with baking.

## Slaughterhouses.

There are in the Borough twelve private slaughterhouses. These are situate in different parts of the town and are mostly in close proximity to dwellinghouses. The slaughterhouse belonging to the Co-operative Society is no longer used for the killing of cartle, meat being delivered from the central headquarters. It is, however, used for the killing of pigs during the winter months.

### Schools.

The sanitary condition and water supply of the schools is satisfactory. Information on these points is given in the Report of the School Medical Officer, published separately. It has not been found necessary to close any schools during the past five years for preventing the spread of infectious disease. For this purpose full use is made of exclusion from school of individual scholars.

## Inspection and Supervision of Food.

### (a) - Milk Supply:-

The only cowshed now occupied in the Borough is the small one at Thornfield Farm on the Heys Estate. The farmer here keeps three cows. The premises are well built, clean and in good order.

During the year 42 samples of milk were submitted for analysis. All were found to be pure and unadulterated.

Samples of milk are now being submitted to special bacteriological analysis for Tuberculosis, once in each quarter.

#### Dairies.

They are six in number. Two of them receive large quantities of milk from the country, in churns, and send it round to householders by horse and float. They do not deal in loose milk on their premises. The Co-operative Society, one of the two, has the milk collected, cooled and pasteurised at a depot in Congleton. On receiving at the Mowbray Street premises it is stored in a refrigerating chamber until the moment of sending on the round.

The Hygienic Milk Company receive milk similarly, by rail, and also sterilised milk in bottles. This milk is sterilised

and bottled at their depot in Manchester. Both these dairies have adequate provision for washing the churns in hot water and cleansing by live steam.

Other three dairies sell milk received in churns from the country, to a round of customers and sell loose milk in a shop, where they also vend eggs, butter and mineral waters. The sixth sells milk and cream in a shop only.

All the above premises were in good order and kept in a clean and satisfactory condition.

### (b) Meat, &c.

The following is a report of the meat condemned by Mr Hall and sent to the destructor:—

#### TUBERCULOUS MEAT.

		O. marie

Other Parts	. 5	

### OTHER MISCELLANEOUS FOODS.

Fish. 48 lbs.; Veal, 18 lbs.; Tinned Beef, 24 lbs.; Tinned Tongue, 17 lbs.; Tinned Salmon, 12 lbs.; Tinned Pineapple, 5 lbs.; Rabbits, 48; Pickled Bellies, 252 lbs.

#### (c) Adulteration :-

129 samples of food and drugs were submitted to the Borough Analyst. Of these, samples of chocolate, rum, and linseed meal were found to be adulterated. Prosecutions were undertaken in two cases and fines of £5 3s. Od. inflicted in each.

# Prevalence of, and Control over Infectious Diseases.

The special prevalence of Measles and Chicken-pox has been alluded to under the heading of "Causes of Sickness.

Diphtheria Antitoxin is kept at the Central Police Station, and may be obtained there by a medical man at any time of the day or night. The amount issued was 200,000 units.

Bacteriological samples were examined and reported upon by the Pathological Department of the District Infirmary as follows:—

Blood	2
Throat Swahs	6

Cases of Scarlet Fever are isolated at the Borough Fever Hospital, of Diphtheria and Enteric at Westhulme Hospital, Oldham.

The Schick and Dick Tests have not been used.

No vaccinations have been performed by the Medical Officer of Health under the Public Health (Smallpox Prevention) Regulations, 1917.

In estimating non-notifiable acute infectious disease, the information is obtained chiefly from school intimations.

Disinfection of Clothing and other articles is carried out by the Steam Disinfector.

Number of articles disinfected.....1135

Number of houses fumigated ..... 325

# Public Health (Prevention of Tuberculosis) Regulations, 1926:—

No action has been taken.

## Public Health Act, 1925, Section 62:-

No action was taken under this Section.

## HEALTH DEPARTMENT,

## TOWN HALL CHAMBERS,

May, 1927.

To the Chairman and Members
of the Health Committee.

Ladies and Gentlemen,

I beg respectfully to submit to you the following as a summary of the work done by this department, also the tables of vital statistics for the year ending 31st December, 1926.

## Summary.

Number of Nuisances reported and found  ,, abated  Statutory Notices served

## Sale of Food and Drugs Acts.

The following table summarises the working of the Sale of Food and Drugs Act for the year 1926 :--

Milk	
Chocolate 10 4 40	
Butter 8 0 0	
Rum 8 (c) 2 25	
(a) Condensed Milk 8 0 0	
Camphorated Oil 4 0 0	
Tincture of Rhubarb 4 0 0	
Amm. Tinct. of Quinine 4 0 0	
Linseed Meal 4 1 25	
Ground Rice 4 0 0	
Cheshire Cheese 4 0 0	
Lard 4 0 0	
Coffee 4 0 0	
Sponge Cake 4 0 0	
(b) Preserved Cream 4 0 0	

Article Submitted.	No. of Samples Analysed.	No. of Samples Adulterated.	Percentage of Adulteration.
Whisky	2	0	0
Dried Milk	2	0	0
Miscellaneous	9	0	0
Total	129	7	5.4
		1	

- (a) Submitted under the Public Health (Condensed Milk) Regulations, 1923.
- (b) Submitted under the Public Health (Milk and Cream)
  Regulations, 1912.
- (c) Contravened Section 10 of the Licensing Act, 1921.

## SMOKE NUISANCE.

Owing to the observations being suspended, none have been taken throughout the year.

During the month of March a series of lectures on the subject were given by Mr. T. Binns, of the Smoke Abatement League of Great Britain.

The lectures were inaugurated by the Health Committee, and were well attended by Engineers and Firemen.

After termination of the coal strike, the question of resuming the observations were again considered by the Committee, when it was decided that they be further suspended.

The emission of black smoke from mill and workshop chimneys still pervades the district, and the evil effects of atmospheric pollution by coal smoke was pointed out by Dr. Veitch Clark, Medical Officer of Health for Manchester, at the smoke abatement conference held in the City, as to the serious results of constantly breathing-in of soot and tarry products in smoke as one of the most pronounced causes of permanent injury to the lungs.

The Public Health (Smoke Abatement) Act, 1926, which comes into operation on the 1st July, 1927, provides for the making of bye-laws by local authorities regulating the emission of smoke, and for enforcing the provisions of the Act.

## Factories, Workshops and Workplaces.

## 1.—Inspection of Factories, Workshops & Workplaces

Including Inspections made by Sanitary Inspectors, or Inspectors of Nuisances,

	Number of				
Premises.	Inspections.	Written Notices.	Prosecution (4)		
Factories (Including Factory Laundries)	103	2			
Workshops (including Workshop Laundries)	196	3			
Workplaces (other than Outworkers' premises)	15	0			
Total	314	5			

## 2.—Defects found in Factories, Workshops and Workplaces.

	N	371		
Particulars.	Found (2)	Remedied (3)	Referred to H.M. Inspector (4)	Number of Prosecutions (5)
Nuisances under the Public Health Acts:—

Other offences	3	3	0	0
(Excluding offences relating to outwork and offences under the Sections mentioned in the Schedule to the Ministry of Health (Fac- tories and Workshops Transfer of Powers) Order, 1921.)				
Total	16	16	0	0

## HOUSING.

Number of new houses erected during the year 1926:

(a) Total (including numbers	given		
separately under (B)		-	45

(b) With State assistance under the Housing Acts:—

(i)	Ву	the Local Authority		25
(ii)	Ву	other bodies or persons	-	20

Number of houses in course of erection under Council's  Building Scheme 144
Financial assistance for purposes of increasing housing accommodation:
Have any advances been made during 1926:-
(a) By Loans? No. No. 0 Amount of loans £0 (b) By subsidy? Yes. No. 35 Amount of subsidies £3,500 Unfit dwelling-houses.
Inspection—(1) Total number of dwelling-houses
inspected for housing defects (under Public Health or Housing Acts) 519
(2) Number of dwelling-houses which were inspected and recorded under the Housing (Consolidated)  Regulations, 1925 192
(3) Number of dwelling-houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation 0
(4) Number of dwelling-houses (exclusive of those referred to under (3) found not to be in all respects reasonably fit for human habitation 15
Remedy of Defects without service of formal Notices:—
Number of defective dwelling-houses rendered fit in consequence of informal action by the Local
Authority or their Officers 214
Action under Statutory Powers.

A.—Proceedings under section 3 of the Housing Act, 1925.

of which notices were served requiring repairs	0
(2) Number of dwelling-houses which were rendered fit after service of formal notices:—	
(a) by owners	0
(b) by Local Authority in default of owners	0
(3) Number of dwelling-houses in respect of which Closing Orders became opera- tive in pursuance of declarations by	
owners of intention to close	0
B.—Proceedings under Public Health Acts.	
(1) Number of dwelling-houses in respect of which notices were served requiring defects to be remedied	43
(2) Number of dwelling-houses in which defects were remedied after service of formal notices:—	
(a) by owners	43
(b) by Local Authority in default of owners	0
C.—Proceedings under sections 11. 14 and 15 of the Housing Act, 1925.	
(1) Number of representations made with a view to the making of Closing Orders	0
(2) Number of dwelling-houses in respect of which Closing Orders were made	0

(3) Number of dwelling-houses in respect . of which Closing Orders were determined, the dwelling-houses having been rendered fit 0 (4) Number of dwelling-houses in respect of which Demolition Orders were made 0 (5) Number of dwelling-houses demolished in pursuance of Demolition Orders ... 0 D.-Number of Houses demolished voluntary by

0

## Enteric Fever, Scarlet Fever, Diphtheria.

owners, or converted to workshops, &c.

The following tables show the number of rooms in the houses affected, cases notified, removed to Hospital, treated at home, also the number of occupants and rate of attack.

#### ENTERIC FEVER.

No. of Rooms in the houses affected	4	5	6	7	Total
Cases notified	1	1	1	2	5
Cases removed to Hospital	1	1	0	2	4
Cases treated at Home	0	0	1	0	1
No. of occupants at all ages	7	5	4	11	27
Attack Rate per 1,000	0.16	0.11	0.09	0.25	0.62

Three deaths were recorded. Death Rate 0.06.

No overcrowding was found to exist.

## SCARLET FEVER.

No. of rooms in the houses affected	0	4	5	6	7	Over 7 Rooms	Totals.
Cases notified	0	55	3	3	2	3	66
Cases removed to Hospital	0	38	3	1	0	0	42
Cases treated at Home	0	16	1	2	2	3	24
No. of occupants at all ages	0	280	13	16	11	12	332
Attack Rate per 1,000	0	6.50	0.30	0.37	0.25	0.27	7.7

One death was recorded. Death Rate 0.02,

Two cases of overcrowding were found to exist, both of which occurred in houses with four rooms.

### DIPHTHERIA.

No. of rooms in houses affected	0	4	5	6	Over 7 rooms	Totals.
Cases notified	0	- 13	2	1	0	16
Cases removed to Hospital	0	4	1	0	0	5
Cases treated at home	0	8	2	1	0	11
No. of Occupants at all ages	0	69	7	4	0	80
Attack Rate per 1,000	0	1.60	0.16	0.09	0.0	1.85

Two deaths occurred. Death Rate 0.04. No overcrowding was found to exist.
