The Annual Report of the Medical Officer of Health  
to the Llangefni Urban Sanitary Authority  
for the year ending December 31/1893

Area  
Population

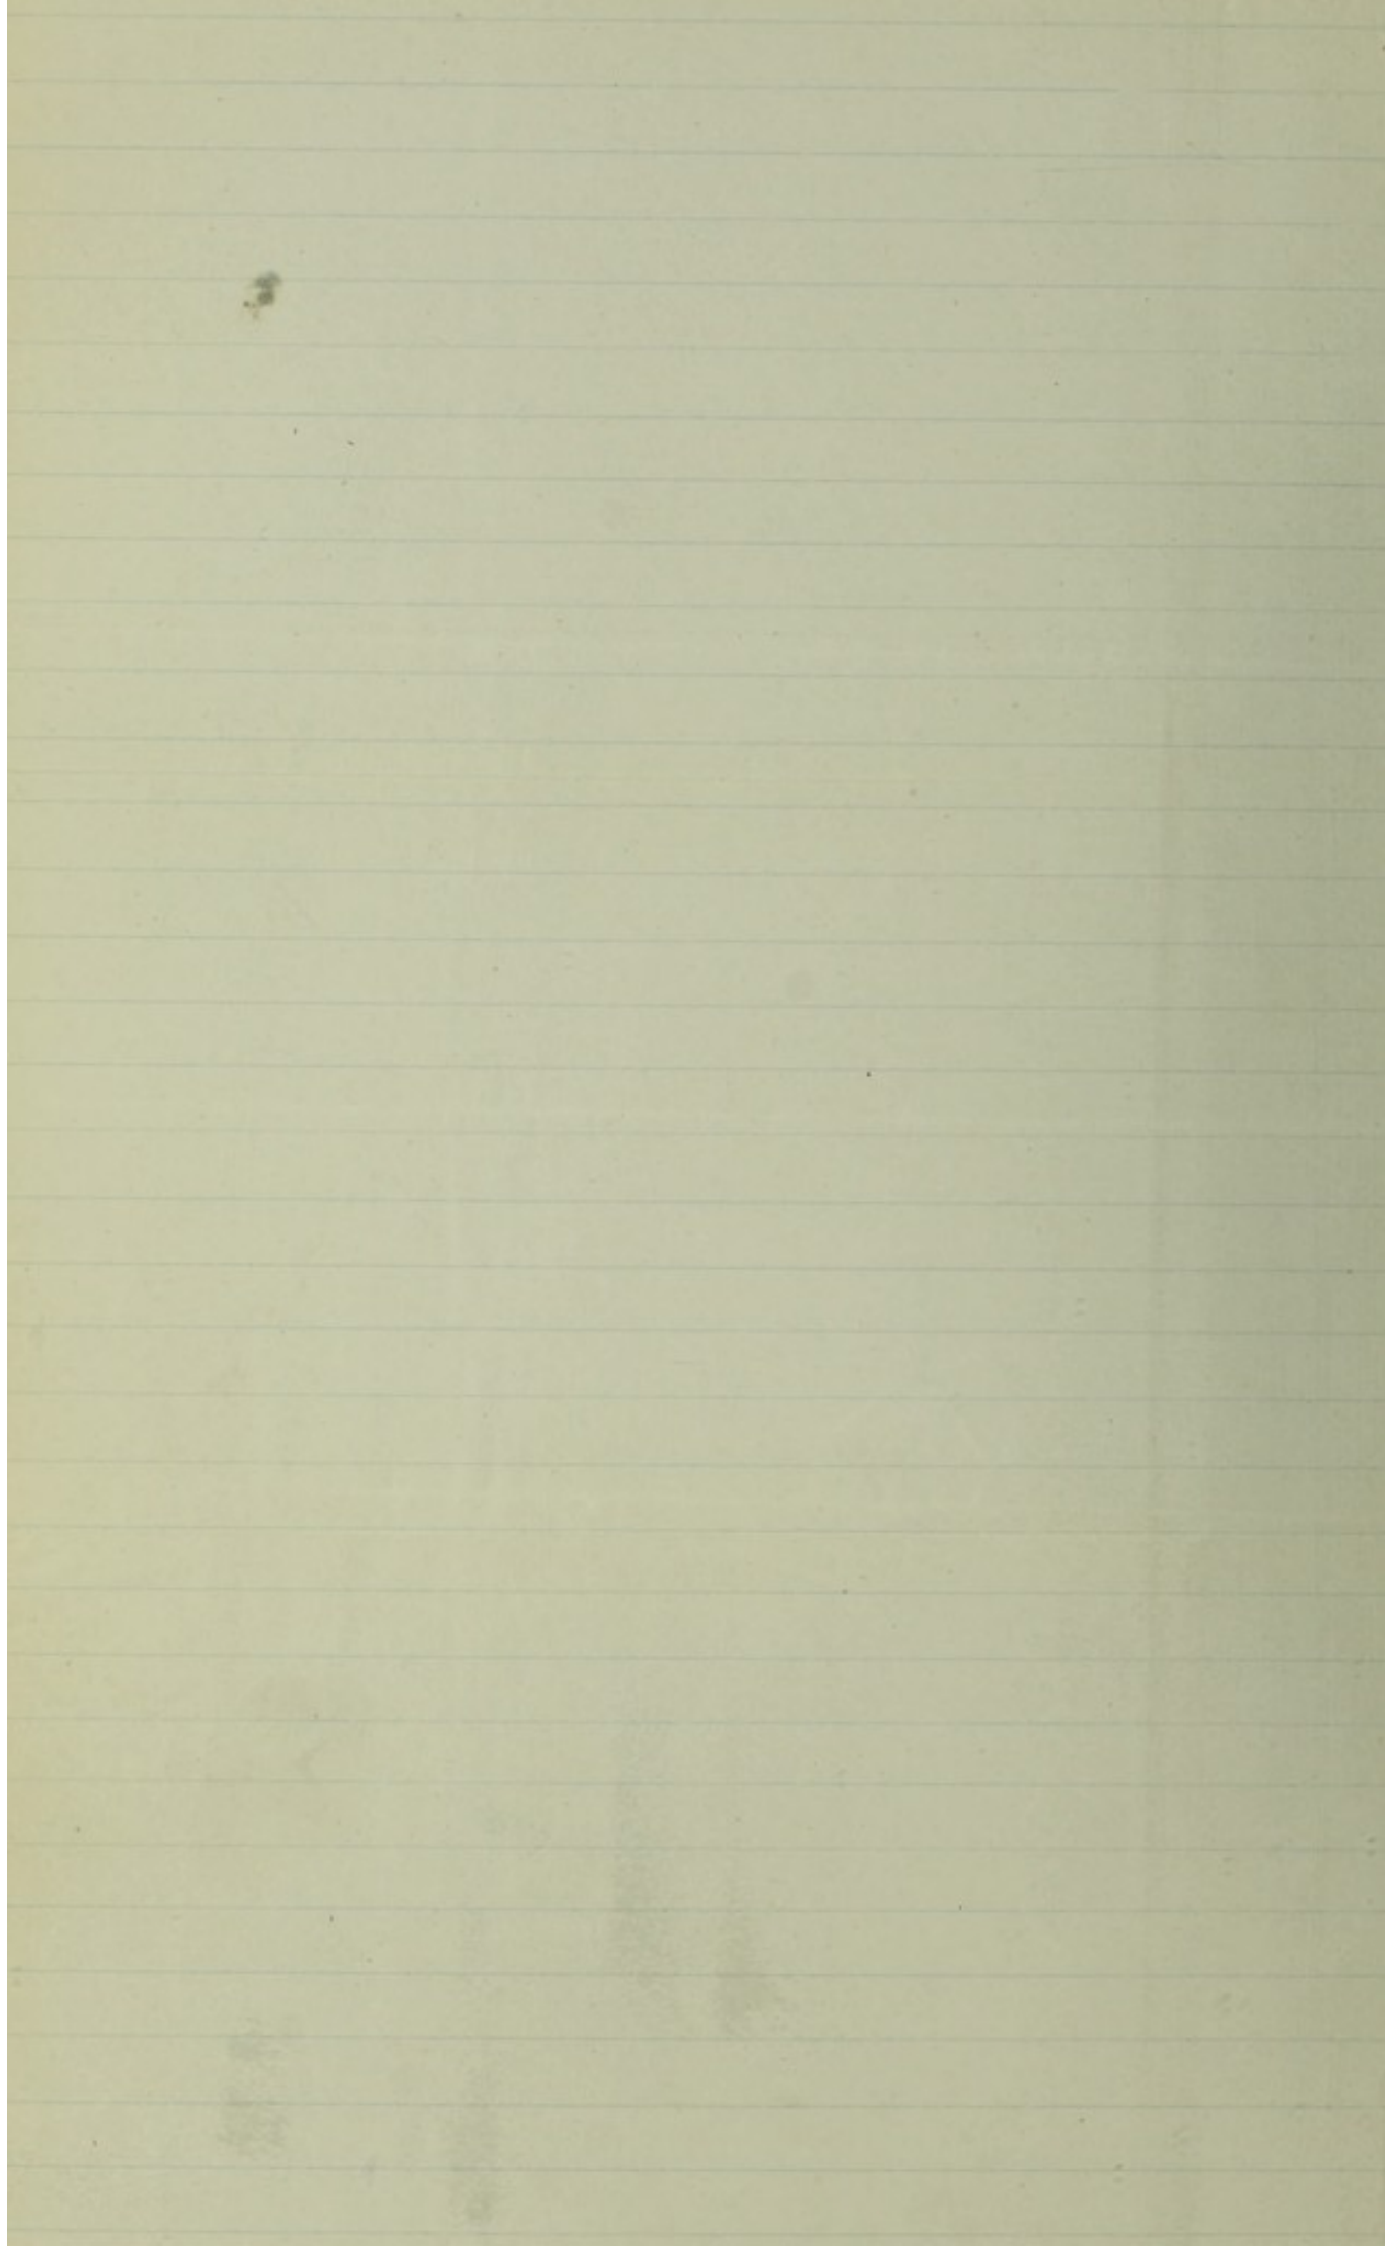

The district comprise the Parish of Llangefni  
& covers an area of 2367 acres with 422  
inhabited houses and a population in April  
1891 of 1624 but adjusted to the middle  
of 1893 of 1637  
During the last six months of the year the  
population averaged 1700 in consequence  
of the Sewerage & Water works being carried  
on.

Births

During the year there were 50 births registered  
(24 boys & 26 girls) - equal to a birth-rate of 30.54  
per 1000 of population. The mean rate for  
the last seven years being 23.4 therefore  
this year's birth-rate has been much higher  
than usual. Of course the smallness of the  
population is an element of fluctuation  
both in the birth & the death-rate.  
The birth-rate for England & Wales was 30.8.

Deaths

The deaths registered during the year number  
43 - equal to a death-rate of 26.2 per  
1000 of population. The mean death-rate  
for the last twelve years being 21.8 per 1000.  
The death-rate for England & Wales was 20.2  
Fifty per cent of the deaths registered were above  
60 and 39½ per cent were 70 years of age &  
upward.  
Including those who died under 1 year the  
average of life has been 56 years & 10 months.

Causes of  
death

"

The principal causes of death were as follows  
Bronchitis 7 Apoplexy 6 Old age 4 Convulsions 4  
Enteric Fever 1 Phthisis 4 - equal to a death-rate of  
2.44 per 1000 of population ~~Cancer 4~~ - the mean  
rate for the last three years being 3.24  
Cancer 1 Injury 2 on which inquests were held,  
further particulars given in Table 3

Infantile  
Mortality

"

There were 6 deaths registered under 1 year (2 of which  
were not certified) - equal to an Infant death-rate  
of 14 per 100 deaths or of 120 per 1000 births, which  
is low compared with that for England & Wales which  
stands at 159 per 1000 births

Zymotic  
Diseases

"

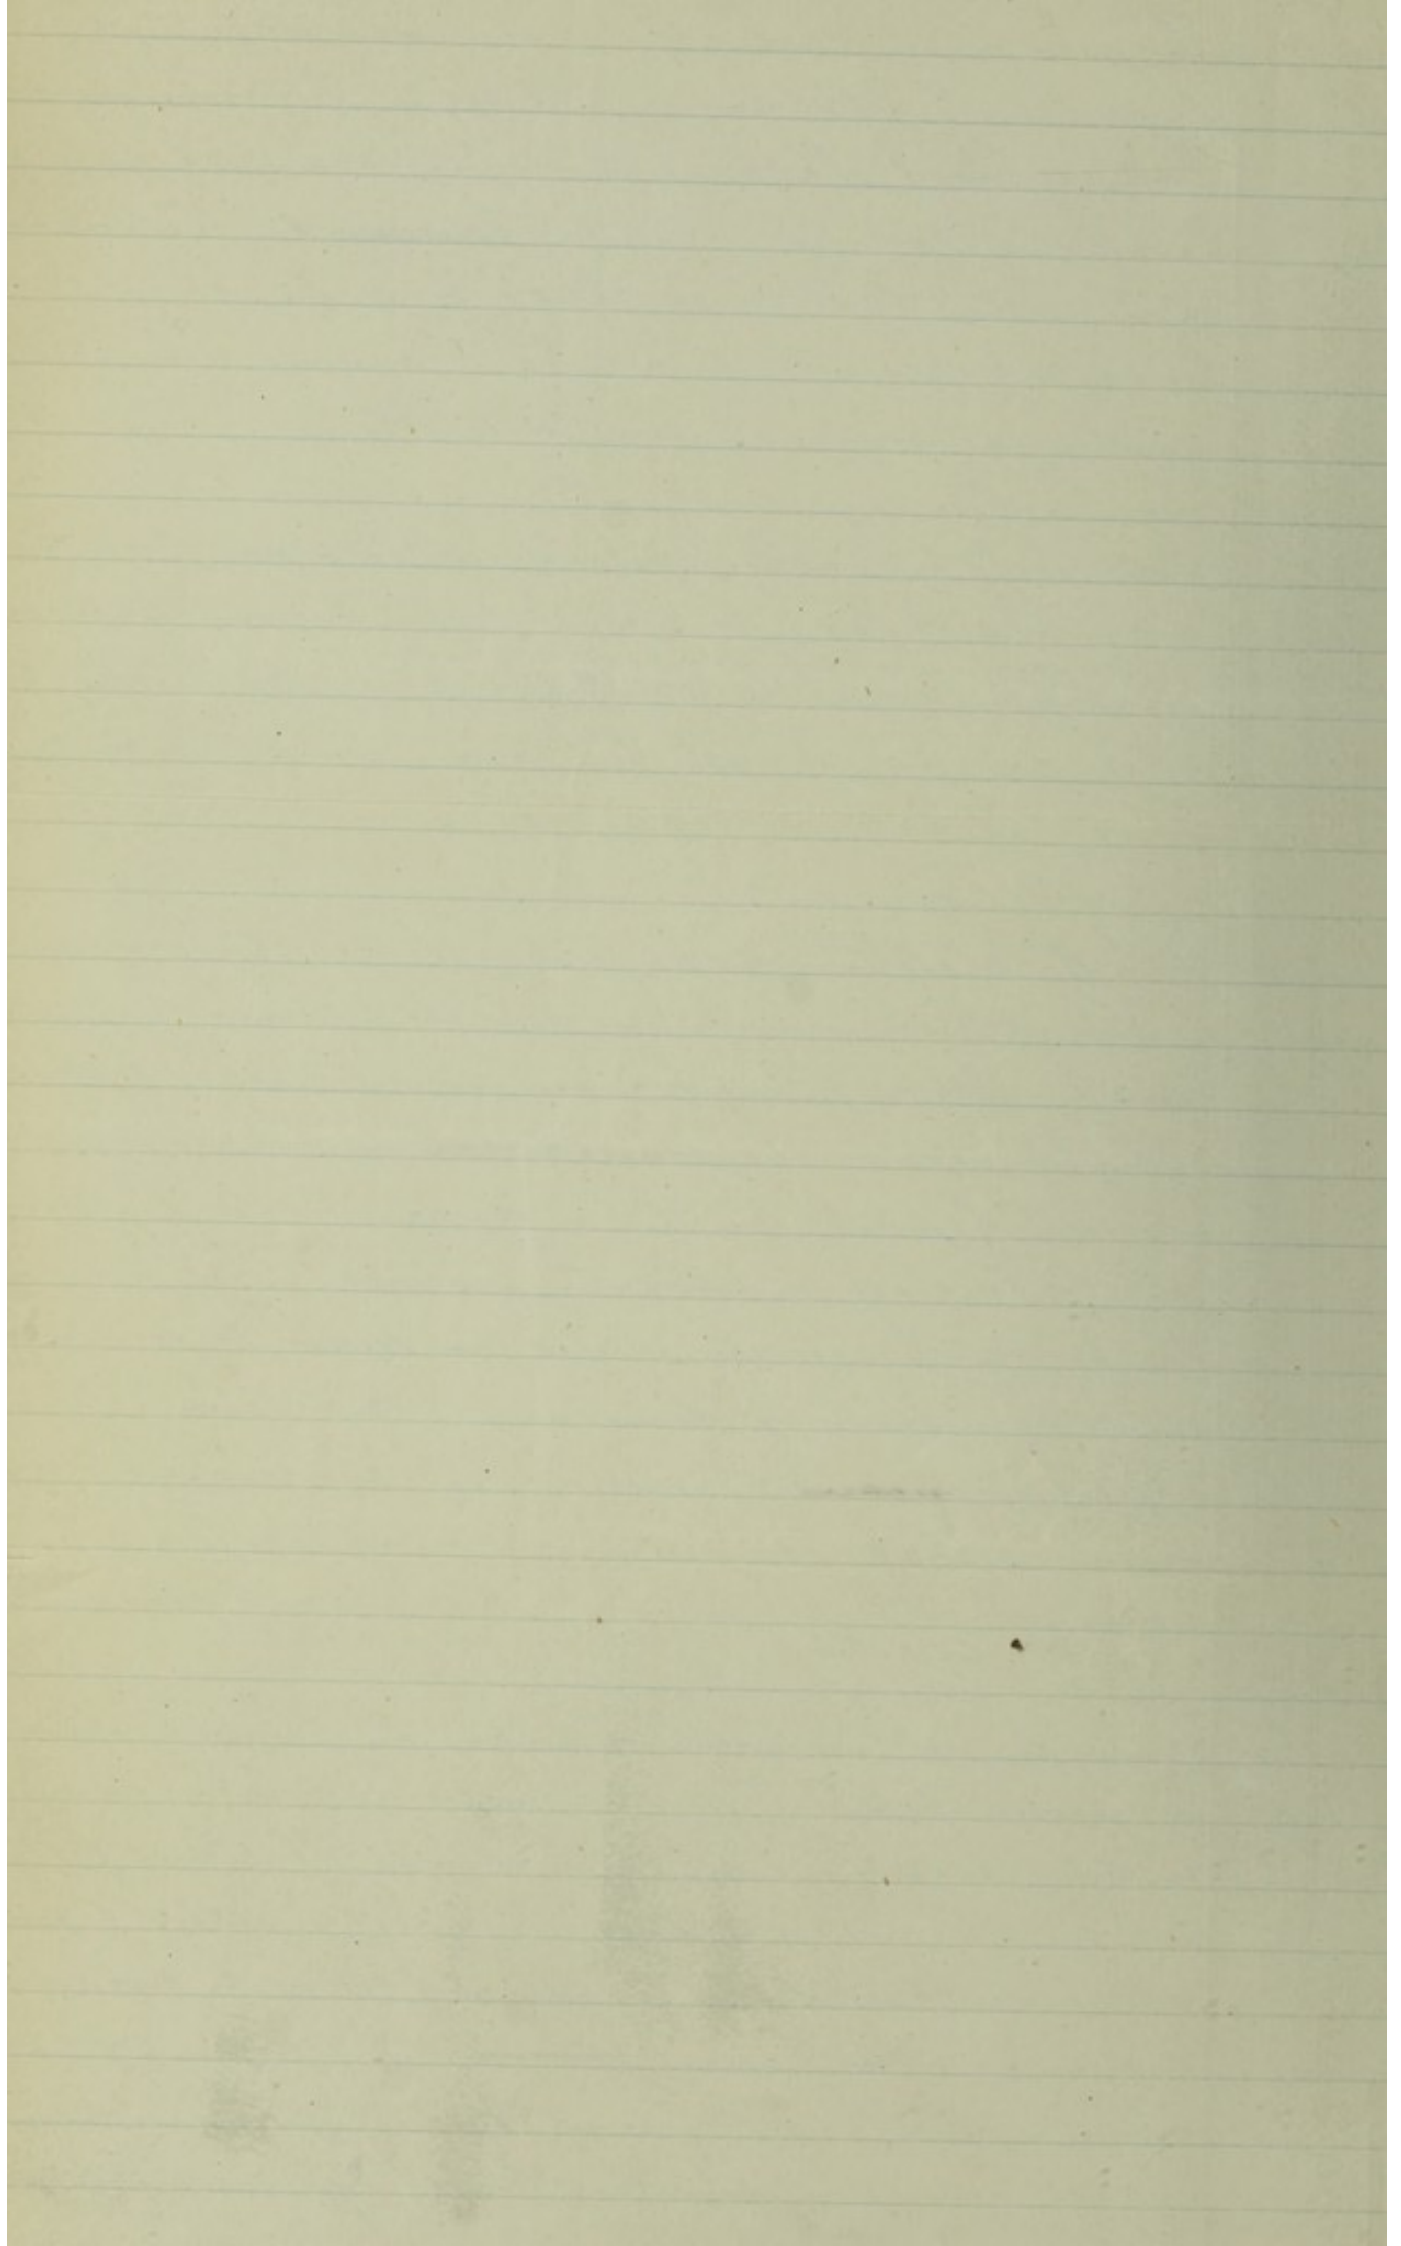

With the exception of one fatal case of Enteric Fever  
the District has been quite free from all ordinary Zymotic  
diseases although there ~~had been~~ <sup>were</sup> several cases of Diphtheria  
& Scarlet Fever in the ~~neighbourhood~~ surrounding ~~district~~  
I have no doubt but that in the above case the Fever  
was contracted outside the ~~district~~ <sup>his residence at 10, St. Paul's</sup> whilst following  
the house & premises where ~~he~~ <sup>he</sup> ~~lived~~ <sup>lived</sup> was  
in a satisfactory sanitary condition  
Efficient ~~and~~ & fortunately successful means  
were used to prevent the Fever spreading

The Zymotic death-rate per 1000 of population in England & Wales  
was 2.47 whilst that for the District was only .61

Influenza

During the last three months of the year the District was visited  
by a <sup>general</sup> severe Epidemic of Influenza (about 180 cases) differing  
in type & character from the previous Epidemic of 1890  
In the large majority of the cases the force of the attack appeared  
to be mostly concentrated on the Nervous & not on the Respiratory  
system as in the previous <sup>one</sup> Epidemic with most severe  
Cervico-occipital & Inguinal Neuralgia <sup>most frequently</sup> of  
the right side & in many cases acute Hyperaesthesia of the  
nose & ear

There were three cases of Paralysis from it.

Board School  
" "

The required increased accommodation and <sup>altered</sup> improved sanitary arrangements <sup>at this school</sup> are now being carried out and will be completed in about two months

Glanburgh Rd  
& Cross St drain  
" "

The prolongation of the drain in Glanburgh Rd and the diversion of the drain at the back of Cross St has been a great sanitary improvement

Southern part  
of the Town  
Subsoil Draining  
" "

The part of the Town on the South side of the River <sup>having been built</sup> on clay subsoil which has never been drained - the deleterious effect of which is felt in the Malaria death-rate of that part of the Town - more especially in Phthisis &c &c (I hope in a future report to enter fully into this matter) I would strongly recommend that advantage be taken of the drains in Cross St. New St. Peter St. Church Lane &c to which the same for Subsoil drainage if approved by the Sanitary

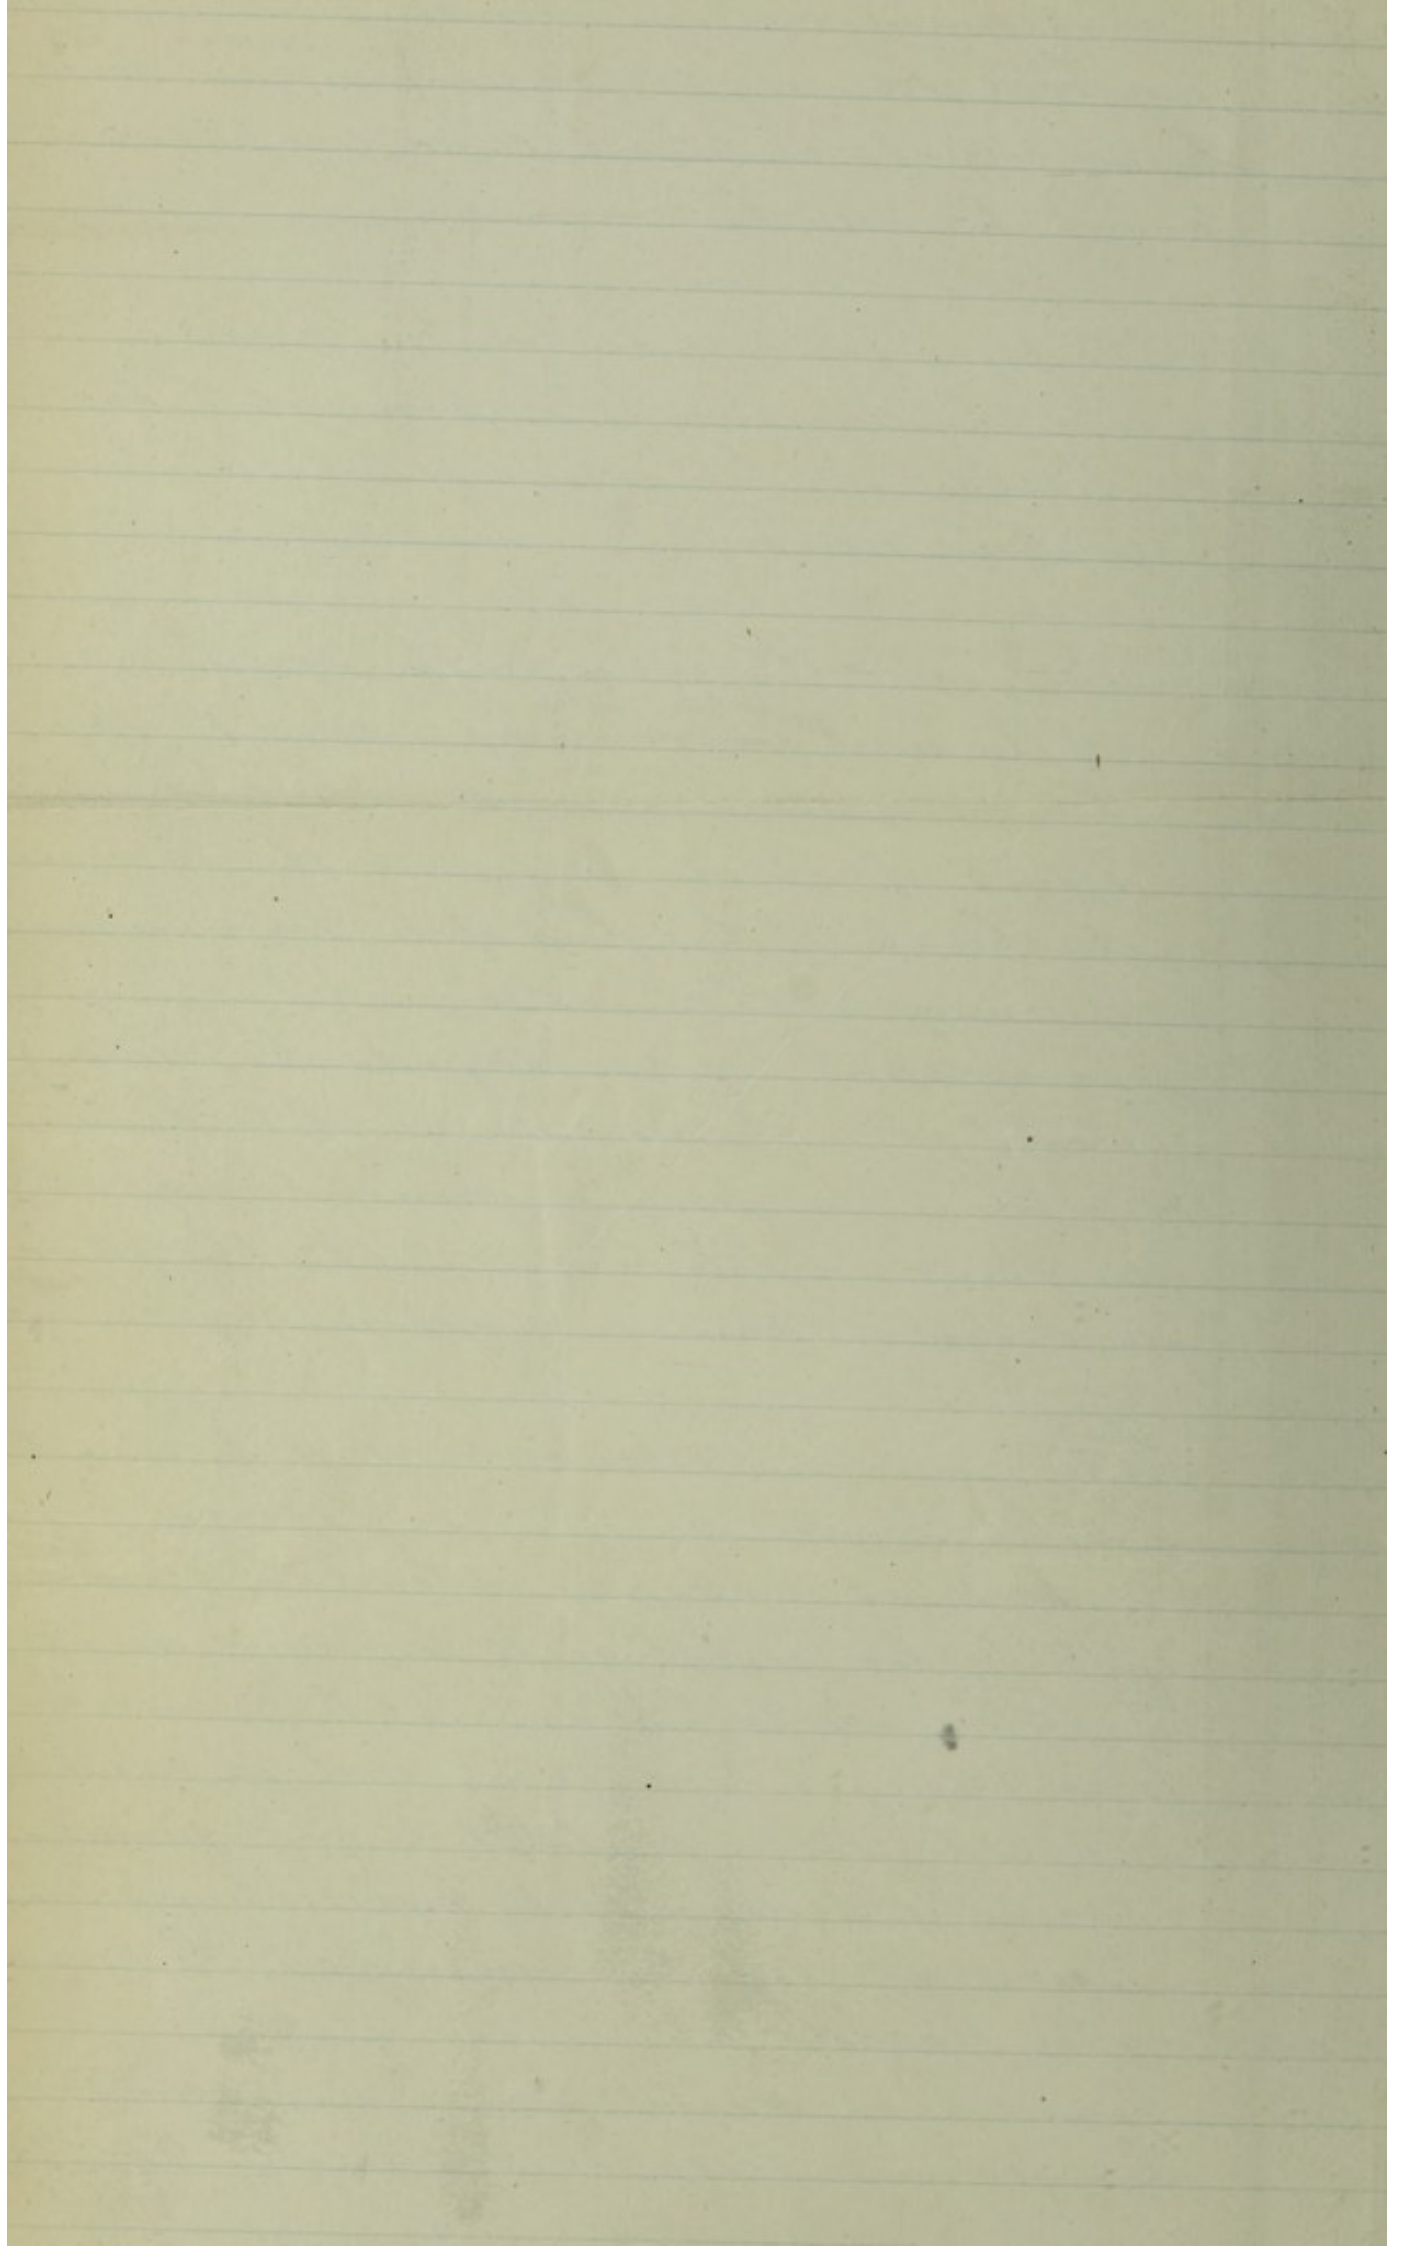

Sewerage &  
waterworks  
&c &c

As the Sewerage & Waterworks will be completed in a few weeks I will be very advisable for the ~~the~~ Board to adopt - at least the third part of "The Public Health Acts Amendment Act of 1890. So as to be better able to enforce proper & efficient connections with the sewers. It would greatly facilitate this if minute & carefully drawn out instructions were issued & circulated amongst the households of the district by the Board

I would also advise the Board to adopt the The Infectious Diseases Notification Act 1889

Feb 16/96

# NOTES ON TABLES A AND B.

- NOTE 1.** *Medical Officers of Health of "Combined Districts" must make a separate Return for the District of each Sanitary Authority.*
2. *Medical Officers of Health acting for a portion only of the District of a Sanitary Authority should write, in the heading of the Table, the designation of the Division for which they act.*
  3. *The words "Urban," "Rural," or "Metropolitan" must be inserted in the appropriate space in the heading, according as the Sanitary Authority for the District is Urban or Rural, or is within the Metropolitan Area.*
  4. *The "Localities" adopted for the purpose of these statistics should be areas of known population; such as parishes, groups of parishes, townships or wards.*

As stated at the head of the first column in each Table, *Public Institutions* should be regarded as separate localities, and the deaths in them should be separately recorded. Workhouses, Hospitals, Infirmaries, Asylums, and other establishments into which numbers of people, and especially of sick people, are received are Public Institutions for the purpose of these statistics.

5. *The deaths which have to be classified in this Table (A), and summed up in the horizontal line of "Totals," are the whole of those registered as having actually occurred in the several localities comprised within the Division or District. But the registered number of deaths frequently requires correction before it can give an exact view of the mortality of a Division or District; and the two lowest horizontal lines are provided for the purpose of enabling Medical Officers of Health to indicate, to the best of their ability, what the extent of such corrections should be. Details concerning the corrective figures, e.g., the institutions that have been considered, or the particular localities to which corrections apply, may appear in the text of the report or in supplementary tables.*

Area and Population of the District  
or Division to which this Return  
relates.

Area in Acres 2367

Population (1891) 1624

In recording the facts under the various headings of Tables A and B, attention has been given to the notes endorsed on the Tables.

*Joan Gilliams* Medical Officer of Health.

(Date) Febry 1904.

## Deaths Registered from all Causes during the Year 1893.

NOTE.—The Deaths of Non-Residents occurring in Public Institutions situated in the District are excluded, and the Deaths of Residents occurring in Public Institutions situated beyond the limits of the District are included.
