LLANGOLLEN URBAN DISTRICT COUNCIL.

ANNUAL REPORT OF THE MEDICAL OFFICER YEAR ENDED 1939

Miss Langford & Gentlemen,

In accordance with Circular 2067 ( Wales ) it is not intended that the report for the year 1939 should follow the usual lines, but that essential and urgent matters only should be reported.

As the usual figures have not been received from the Registrar General it is not possible to give the usual statistics.

So far as Llangollen is concerned there has been no usual incidents during the year in question.

The number of cases of infectious disease was the lowest for many years being 2 cases of Scarlet Fever and 1 case of Erysipelas only, which in view of the large influx of evacuees during the latter part of the year is very satisfactory.

Four new cases of Tuberculosis were reported but no deaths from this disease were recorded.

Forty deaths of residents were recorded of which two were of children under the age of two years.

The greatest number of deaths were from some form of heart disease they reached a total of 17.

Carcinoma accounted for 4 deaths.

The number of births was 46 of which two were still births.

The Sanitary circumstances of the district have not changed since my report for 1938, but the usual inspections have been carried out and defects have been dealt with.

Precautions have been taken to safeguard the water supply and to provide an alternative supply should the emergency arise.

A stock of "chlorox" has been obtained in case the chlorinating plant fails.

Other matters within the district are quite normal and there is nothing calling for special mention.

Yours obediently,

(Sgd) Richard D. D. D. D.

MANCHESTER BOARD OF HEALTH

ANNUAL REPORT OF THE MEDICAL OFFICER YEAR ENDING 1939

Mrs Langford & Gentlemen,

In accordance with Circular 2087 (Wales) it is not intended that the report for the year 1939 should follow the usual lines, but that essential and urgent matters only should be reported. As the usual figures have not been received from the Registrar General it is not possible to give the usual statistics. So far as Liverpool is concerned there has been no unusual incidents during the year in question.

The number of cases of infectious disease was the lowest for many years being 2 cases of scarlet fever and 1 case of typhoid only, which in view of the large influx of evacuees during the latter part of the year is very satisfactory.

Four new cases of tuberculosis were reported but no deaths from this disease were recorded.

Forty deaths of residents were recorded of which two were of children under the age of two years.

The greatest number of deaths were from some form of heart disease they reached a total of 17.

Carcinoma accounted for 4 deaths.

The number of births was 42 of which two were still births. The sanitary circumstances of the district have not changed since my report for 1938, but the usual inspections have been carried out and defects have been dealt with.

Precautions have been taken to safeguard the water supply and to provide an alternative supply should the emergency arise.

A stock of "shovels" has been obtained in case the distribution of coal is interrupted.

Other matters within the district are quite normal and there is nothing calling for special mention.

Yours obediently,

*(Signature)*

Medical Officer of Health.
