Public Health Inspector: -

F.I. Rowlands, M.R.Son. I.

To the Chaitman and Mambers of the Health Committee. Valley Rural District Council. Mr. Chairman, and Gentlemen.

Mr. Chairman, and Gentlemen,

I have the honour to present to you the Annual Report upon the health of your District during the year 1960.

As was to be expected the Registrar General's mid-year estimates show but slight variation in the population, although the former year's increase of 60 upon that of the earlier year is now followed by a decrease of 210 to 12,450. The respective populations in recent years have been :- 1954 - 12,100;-1956 - 12,490; 1957 - 12,550; 1958 - 12,600; or in other words a progressive trend towards increase from 1954 has now for the first time reflected a decrease. What even the rescon for the first time reflected a decrease. What ever the reason for this decrease may be it does not appear to be due to any deterioration in the health of your community.

The Rateable Value relative to the total area of 58,784 acres, stands at £108,730 as compared with the earlier years' figure of £107,203. At mid 1960 the production of a Penny Rate has increased by £10 to £429.

The corrected Birth Rate has virtually shown no change at 18.0 and compares with 17.1 for England and Wales, and with 17.0 for the County.

The Corrected Death Rate has fallen from 12.9 to 11.7 and compares with 12.4 for the County as a whole. An analysis of the Causes of Death does not reveal any really significant changes, for example, the malignant disease group has fallen by 6 occurances and the cardiac group by one death. Respiratory Tuberculosis caused two deaths.

Although there were some isloated occurrences of Notifiable Diseases there were no epidemics.

There was a notable fall in the Notification of Tuberculosis from the former 12 to the current 4, and of these 3 were of the Respiratory form (2 under the age of 15 years, and the third over 45 years old).

Protective vaccination and immunisation measures continued to be maintained by the local Health Authority with the addition of a drive against Policmyelitis which included evening sessions to provide for adults wishing protection but usually at work during the day-time.

During the year only two notices were required to be served under Section 20 of the Milk andDairies Regulations relative to the occurence of abortus fover infection of milk. It was possible to cancel one of these notices a month later, the remaining one being suill outstanding.

With Water mains extensions to three more village areas in the North West during the year - all the larger villages within the district are now served with pure water, - leaving the more out-of-the-way communities still to benefit as soon as found practicable by the County Water Authority.

The District new contains 84 miles of water mains supplying what amounts to 32% of the total County, wide distribution. In terms of premises and population mains availability this means that about 2,500 houses are connected directly, and with a stand-pipe availability of an additional 165, giving a population coverage of 9,534 out of the District's total population of 12,450.

This direct house coverage has increased from 1,604 in under 10 years.

During the year the additional sewerage scheme brought into operation brings the total to 10, and. in addition three new a schemes were commenced and five more are projected, thanks to the enterprise of the Council and the Public Health Inspectorate.

These schemes are, of course, separate from single Council-house Estates having their own self-controlled sewerage disposal plants.

In conclusion, I should like to again thank the Chairman and Members of their Council for their interest and the Clerk and Both Senior and Assistant Public Health Inspectors for their ready and willing co-operation at all times.

I am, Gentlemen,

Yours faithfully,

ader Bretton 20 of the lair malleiries Beguleilone reletive to the contented of the solution for the interval of aris. It was builted to restore these a these a these e. bosts inter. the

the second to a second with our and the leavest of the second of the second sec

# ANNUAL REPORT OF THE SENICE PUBLIC HEALTH INSPECTOR

#### for the year 1960.

In accordance with the provisions of the Public Health Officers Regulations, 1959, I beg to submit my report on the sanitary conditions of the area, together with a summary of work carried out during the year 1960.

# National Assistance Act, 1948

## Section 50.

The Council were called upon to take action in one case only, where relatives refused to arrange the burial. Eventually the Council were able to recover the expense from the beneficie; of the small estate left by the deceased.

# Water supply

The County Council as water authority for the whole island, have made considerable progress during the year with mainlaying in the district. An area in the north western part of the district has been provided with a main water supply for the first time, and includes the villages of Llanfaethlu, Llanrhyddlad and Rhydwyn. As a result of this last extension all the larger villages and hamlets have been provided with main water, but there still remains large pockets in the most rural parts where this privilege is not enjoyed and the residents are still dependent on wells for their domestic water supplies, and these must be regarded as unsatisfactory as to quantity and quality.

Although there was considerably more rainfall than during the previous year, there was one short period of drought when water had to be supplied to a few localities by road transport

The total length of additional distribution mains laid during the year was 12 miles, which brings the length of mains within the district to just over 84 miles. This represents 32% of the total length of distribution mains in the County, and is 33 and 19 miles respectively greater than the two other rural districts.

The total number of dwelling houses supplied with main water

(a) Number of houses with	- Houses.	Population
<ul><li>direct connection to water</li><li>main.</li><li>(b) Number of houses depend-</li></ul>	2,559	8,957.
ent upon stanpipe supplies.	165	557
Total	2,724	9,534

The above figures at (a) show that an additional 208 houses have been connected to the water main, making a total of 1604 since the year 1951.

# Water Sampling.

A total of sixty eight samples were collected during the year and forwarded to the Public Health Laboratory for bacteriological examination. 18 of the samples were procured from private sources, 11 from public supplies and 39 from watercourses. Following is a summary of the results obtained.-

	Private	Public	Watercourses.
Satisfactory.	3	4	-
Unsatisfaetory.	10	7	39
	18	11	39
	Tot	al 68.	oteo Ilnoz dui 1

A high percentage, 55.5%, of the samples taken from private sources were unsatisfactory for consumption in the raw state, caused in the main by entry of contaminated sub-soil into the wells. Users of all such supplies were advised as to the works required to secure more wholesome supplies. Unsatisfactory results obtained from public supplies were referred to the Anglesey Gounty Council, as Water Authority, for necessary action.

In accordance with past practice, the samples taken from watercourses were in relation to existing and proposed village sewerage schemes where sewage effluents are discharged or are intened to discharge into the watercourses. All results of such samples showed that contamination ranging from "moderate to heavy" was present.

# Sewerage and Drainage.

# Village Schemes.

One new sewerage sheme to serve the Gwalchmai area was brought into operation during the year, which brings the total number controlled by the Council to ten. Three only are entirely gravitation systems, the other seven being pumping schemes operated by eleven automatic pumping stations, the motive power in ten being electricity, and a diesel unit is installed in the eleventh. As a precautionary measure a diesel unit has been installed in three pumping stations, so as to evercome any prolonged failure ofcelectricity.

The number of sthemes which have a sea outlet remains at four, and in each case crude sewage is discharged without any treatment, but there has not been any trace of sewage pollution on adjoining beaches. One gravitation scheme links up with the sewerage system of an adjoining urban area, and the remaining five which serve inland villages are fully equipped with efficient treatment and disposal works, which are all maintained in proper working order. All machinery in the pumping stations have operated with the minimum of maintenance, only few replacements have been necessary with the older plant and no damage has redulted from frequent power failures. Work on three new schemes were commenced, one being a joint scheme with Holyhead, and the other two will serve the villages of Llanfachraeth and Llanfaethlu. Schemes are also in course of preparation to serve the villages of Caergeiliog, Llanddeusant, Llynfaes, Llanfaelog, Pencarnisiog, four acres in the Parish of Holyhead Rural and the Gorad area of Valley. It is anticipated that work on two of these schemes will commence early next year.

# Housing Estate Schemes.

Five estates are dependent on small sewage disposal schemes, one only being a pumping scheme and automatically controlled by electricity.

#### General

Surface water sewer' have been maintained and the few remaining open ditch sewers are cleansed regularly. Property owners are proceeding steadily with the work of joining house drains with the new sewers as they are completed and, following informal action, thirty six properties were provided with efficient drains.

# Public Cleansing

# House Refuse, Night Soil and Cesspool Cleansing

These three services continue to be carried out by the two vehicles owned and operated by the Council. They are fully employed during normal working hours on the collection of dry house refuse or pail closet oleansing, and cesspool closensing where required must of necessity be carried out after normal working hours.

The remarks made in last year's report regarding the nature and volume of dry house refuse can be repeated, and it has been necessary to work overtime particularly during the summer months in order to give reasonable service. The greater volume of dry house refuse accumulates in premises where visitors are accommodated, and especially in the larger hotels and caravan sites. The service has also been extended to more outlying areas and individual dwellings, as disposing of refuse by other means has become a problem for the householders.

The need for the pail closet cleansing service is gradually becoming less in the villages where sewerage schemes have been completed, thus allowing the service to be extended to the more remote areas, which is greatly appreciated by those who benefit from the extended service. Cesspools attached to nine privately owned dwellings were cleansed during the year at the expense of the owners or occupiers.

In order to improve the cleansing service generally, the Council have placed an order for a cesspool emptier with a pail cleanser attached, which is likely to be delivered in the new year. This vehicle will deal with all cesspool and pail closet cleansing work, and thus relieve the other two vehicles to devote their whole time to the collection of dry refuse, thereby giving a more efficient and frequent service as well as reducing the cost of overtime work.

106 complaints regarding the non-colection of refuse were dealt with in the course of the year, the majority during the summer months, when change of occupation of houses had taken place in between the regular collection dates. Only two such complaints were received regarding the failure of the pail closet cleansing service. The same refuse tip is being operated by the Council, and there is plenty of space for many years to come. Tipping paoilities are also granted to two service units within the area. The tip is not strictly controlled oming to the absence of top soil covering but a good effort to regulate the tip is made by the attendent. The tip has been set on fire by trespassers, three times in the course of the year, and it has been necessary to employ a buill-dozer at considerable expense to extinguish such fires

three new shann

# Street Cleansing.

By arrangement with the County Council, this service regularly applies to nine villages, with extensions during the summer menths, but notwithstanding all reasonable efforts made the control of litter, particularly at the seaside places, has become very difficult.

#### Beaches

The cleansing service was extended to all main beaches during the summer months, with additional litter receptacles, but the results were not satisfactory as the public were not very oo-operative.

There was considerable oil pollution on the beaches along the western coast, and some effort was made to remove the larger patches.

Fourteen lifebuoys were provided and sited on the main beaches along the whole coast line.

The beach their service was continued at Trearddur Bay during the holiday season, with better results

## Public Conveniences

The two public conveniences owned by the Council were well maintained, but the locks and other fittings were frequently damaged.

The provision of an additional four conveniences have been investigated, but difficulties have arisen in obtaining suitable sites which were likely to be approved by the planning authority.

# NUISANCES.

Seventy two complaints of nuisances were received during the year and 140 inspections were made to investigate the complaints. Two complaints were not substantiated and the necessary action was taken to secure abatement of the remaining nuisances. Following is a summary of complaints in various categories :-

Amimals (dead)	2.
Defective ecsspools and sceptic tanks	2.
Defective drains (soil)	24.
Defective drains (sullage)	3.
Defective drains(surface water)	4.
Defective senitary accommodation	3.
Flooding of premises	13.
Nuisances due to disrepair (housing)	15.
Offensive odours.	2.
Refuse Accumulations	4.
	72

Statubory action had to be resorted to in two cases where the nuisances were due to housing disrepair, such action proving effective.

## Shops

The number of shops in operation at the end of the year was 126, being an increase of 5 on the previous year's total, and the number of shops connected with the handling and distribution of food increased by 6, to a total of 105.

Following is a table showing dlassification of shops in the areas. -

Bekers	3.
Butchers	16.
Chemists	2.
Confectioners	2.
Cycles etc.	1.
Drapers	8.
Fish and Chips	3.
Furniture	2.
Greengrocers	3.
Grocers	53
Grocers and general dealers	18
Hairdressers,	4
Ironmongers and hardware.	4
Sweets, minerals and tobacco	7
pweep, minerars and copacco	1.

126

The number of shops in which assistants are employed was 19, an increase of 3 on the previous year's total, and the resinder of the shops were operated by the occupiers and members of their families.

Conditions in as far as waybing facilities and sanitary accommodation for assistants can be considered satisfactory in shops where food is kandled but improvements could be made to these facilities in a few non-food shops.

# Camping Sites and Caravans.

An important step forward in the control of caravan sites was brought about by the Caravan Sites and Control of Development Act, 1960, which came into operation on the 29th of August last year. This new legislation has been long awaited by Public Health Authorities throughtout the country and its introduction has two main objects:-

- (1) to control the location of caravan sites.
- (2) to improve conditions on sites by requiring good standards of lay-out, equipment and maintenance.

The responsibility for controlling the location of sites remains that of the County Planning Authority and the District Council remains the licensing authority.

As soon as the Act became operative, a meeting was arranged bewtween all the Public Health Inspectors of the District Councils together with representatives from the County Council's Clerk's and Planning Departments to agree to a county standard to secure an improvement of sanitary and other conditions on sites. It was decided to adhere, wherever possible, to the Model Standards controlling sites, issued by the Ministry of Housing. Such standards require, among other things, a satisfactory water supply, drainage system, toilet blocks, showers and laundrey facilities.

By the end of the year, eight site licences had been issued and where such licences required the carrying of work to comply with imposed conditions, a reasonable time was allowed to secure completion of such works.

Prior to the coming into operation of this Act, the annual carevan survey was carried out by company with an Officer from the County Planning Department. All known sites, both licensed and unlicensed, were visited and it was found that there was a general increase of about 10% compared with the figures last year. emphasising the increasing populatiry of this area for this particular type of holiday.

Nine of the larger sites were occupied by a greater number of c caravans than that permitted and occupiers of such sites were directed to reduce the numbers accordingly. Occupiers of four sites were directed to secure better arrangements for the folleotion of refuse and litter.

## Rhosneigr Common (Towyn Llyn)

Unsuthorised camping again took place on this Common during the summer months despite the exhibition of notices prohibiting such practices. All such cases were dealt with immediately and occupiers of tents pitched on the common were derected to remove them forthwith.

#### Inspection and Supervision of Food

## Milk

One additional dealer's licence under the Milk (Special Designation) (Raw Milk) Regulations, 1949 - 1954, remained the same at five.

During the year, the Milk(Special Designation) Regulations, 1960, came into operation, such Regulations revoking those previously mentioned. Under these, all dealers licenses will be issued by the Anglesey County Council as Food and Drugs Authority.

#### Mest

The number of licensed private slaughterhouses remained st seven, although only six of these were utilised during the year.

Further meetings were held between this Authority and all persons with an interest in the meat trade in this and the adjoining districts and the reluctance of slaughterhouse occupiers to bring their premises up to the prescribed standard was confirmed. Following such meetings the Council prepared a Slaughterhouse Report, as required under Section 3 of the Slaughterhouses (Hygiene) Regulations 1958 would come into operation as far as this district is concerned. The report was submitted to the Minister of Agriculture, Fisheries and Food for confirmation, and the report was accepted and congirmed without moderation. At the end of the year it was not expected that any of the slaughterhouses would comply with the prescribed standards by the appointed day, after which the occupiers would be completely dependent upon wholesalers for their supplies.

The number of retail butchers shops in the area remained at 16, and of these, six are registered under Section 16 of the Food and Drags Act, 1955, for the manufacture of meat products.

All slaughterhouses were visited regularly and a high percentage of inspection has been maontained, being 96.02% of all animals slaughtered. The inspection percentage of Warious animals was as follows:-

Cattle	100%
Sheep & Lambs	95.6%
Pigs	100%

NN

Alto the

00

The deficiency in inspection relates to sheep and is due to occasional slaughtering outside normal working hours without giving the prescribed notice.

A total of 2261 animals were slaughtered during the year, of which 2171 were inspected. The total slaughtered is 215 less than in the previous year and, with the exception of lest year's figures, emphasises the steady decline in the number of anymals slaughtered since 1954.

Following is a detailed summary of animars slaughtered and inspected etc., during the year -

				2 18 St. 1.

Sheep		Lambs	6001bs. 601bs.
jonkno	Tota	)I.	6601bs.

# Knacker's Yard.

Therr is no premises of this description in the area. The Mat (Staining and Sterilisation) Regulations, 1960

These Regult tions which came into operation during the year requires all butcher's meat and imported meat which is unit for human consumption, to be sterilised, and all kneeker meet to be stained or sterilised before entering into the chain of distribution. One exception is that owners of certain establishments, including mink farms, may obtain supplies of such meat unstained and unsterilised if it is transported in locked containers or vehicles with a conspicuous notice stating that the meat is not for human consumption.

The owner of the one such establishment in the area complied with the requirements.

#### Other Foods.

# Food Hygiene (General) Regulations, 1960

These Regulations which came into operation on 1st October, 1960, amended and consolidated the Food Hygiene Regulations, 1955 to 1957. A number of amendments and improvements to previous legislation have been made but it is disappointing to learn that authority has not been given to require the provision of hot water in mobile shops unless the food sold from such vehicles is for immediate consumption.

Inspections of food premises have been carried out as often as possible and the majority of premises can be considered to be satisfactory. Four informal notices were served to secure protection of open food exposed for sale by providing suitable covers or ensuring that the food is kept beyond the reach of the public. One informal notice was served, directing the occupier to cease the practice of retailing open foodstuffs at a petrol filling station, and the complete separation of the two businesses was abcieved without further action.

#### Bakehouses

The number of bakehouses within the area remained at nine, all of which produce bread and confectionary for both retail and wholesale sale. All such premises operated satisfactorily.

## Ice Cream

Ten applications were received for registration of premises under Section 16 of the Food and Drugs Act, 1955, all of which were approved. The total number of food premises registered for the sale and storage of ice cream was 65, in 61 of which all ice cream sold is pre-packed, loose ice cream being sold in the remaining four.

During the year, 130 samples of ice cream were taken and forwarded to the Public Health Laboratory for becteriological examination. Of these samples, 92.3% were placed within Grede 1, 6.93% in Grade 11 and 0.77% in Grade 1V. The results obtained were again above the average standard which can be expected over a four month period and reflect credit on manufacturers and retailers alike.

Actual figures of semples within the various grades are as follows.-

Grade : Grade : Grade 1	11.	120
Grade 1		1
	miald saw los	parts <u>i trans</u> u
		130

#### Unsound Food

The quantity of unsound food dealt with was again very low and following is a summary of foodstuffs which were poluntarily surrendered, being unfit for human consumption ...

183 lbs. Becon.
8 No. 16 oz. tins baked beans.
9 lbs. Cheese.
41bs Chopped ham.
2 No. 61bs. tins corned beef.
261bs. Doiled ham.
2 dozen meat pies.

## Prevention of Damage by Pests Act.

The Council's rodent operator died during the \_ sarly part of the year, and no successor was appointed. Duties in connection with this Act have been carried out by members of the outdoor staff and it was possible to keep pace with demands for this service. The number of ready-mixed poison baits on the market make it a relatively simple matter for householders to deal with minor infestations and in a great number of cases, householders have been issued with sufficient bait to clear the infestations In infestations of a more serious nature, work of disinfection has been carried out by the Council staff.

Folloaing is a summary of premises inspected and infestations attended to during theyear -

	inspected	Infestations dealt with.

ban nesses wars aver fell for a second state of the second for the second for the second seco	75	70

The one refuse tip operated by the Council continued to be kept under regular observation and all infestations were dealt with

## Clean Air Act

There is little to report under this heading as there are only two smoke producing industrial premises within the area and both are well conducted with little or no dark smoke emission.

## Disinfection and Disinfeutation

Nine houses of parts thereof wore disinfested following confirmed or suspected cases of infections, notifiable, other diseases or for miscellaneous reasons .-

> Scarlet Fever Tubereulosis Miscellaneous

Three premises were disinfested at the request of the occupie:

1.

5.

9

#### Housing

#### General

Thirty eight dwellings were completed on four housing estates during the year, comprising of eighteen bungelows, eight flats and twelve houses. Seventeen of the new dwellings were occupied by families removed from unfit dwellings, the remainder being provided for general needs At the end of the year there were twenty one new dwellings under construction on six housing sites consisting of sixty four houses and seven bungelows. At the end of the year the Council controlled thirty nine housing estates ranging form two to fifty five dwellings in number. The total number of traditionally built houses on these sites is 514 consisting of 410 two storey houses, 85 bungalows and 19 flats, seven of the latter having been converted from two existing buildings. The eight temperary dwellings at Maes Dyffyn are still occupied.

The following is a summary of all dwellings owned by the Council at the end of the year .-

Permanent Dwellings Pre War (two storey) 82 War period, do; Post War, do. 322 (bungalows) 85 (flats) 19 426 514

Temporary Dwellings

Housing units

522

8

The two families occupying the emergency units at Mone Camp, Gwalchmai, were rehoused early in the year, enabling the Council to dispose of and demolish the buildings, and derequisition the land.

The thirty-nine estates previously mentioned have been provided with the following public services .-

della sonatale ort gatelages.	No, of estates.	houses.
<ul> <li>(a) Sewerage, water and electricity</li> <li>(b) Sewerage and water</li> <li>(c) Water and electricity</li> <li>(d) Electricity enly</li> <li>(e) Water only</li> <li>(f) No seevices.</li> </ul>	24 3 3 6 1 2	296 52 34 24 2 6
Closing Wider, and anderthidage	39	514

Three estates have been provided with gas mains, and the extension of electricity and water mains continues, so that most estates will enjoy these services within a few years. Further sewerage schemes are in course of preparation or construction, so that most estates will be provided for in the forseeable future.

All repair and maintenance work is undertaken by direct labour.

Fifty two privately owned houses were completed during the year, the highest annual figure during the post war period, and which brings the total to 250 since 1946. A further 19 were under construction at the end of the year. The quarterly returns on Form P.13 (Hsg) were submitted regularly to the Ministry on accordance with the direction given in Circular 17/55 (Wales) and the following is a summary of the main items for the year 1960:-

# Housing Act, 1957

#### Clearance Orders

One Clearance Order was made, comprising two clearance areas in the parish of Llanynghenedl, and covering five houses, three of which were occupied.

One Compulsory Purchase Order, made as far back as 1958 was confirmed by the Manister of Housing during the year.

## Demolition and Closing Orders

Formal action under Section 16 of the Housing Act. 1957, was taken in respect of seven individually unfit houses. Three c Demolition Orders were made, one Closing Order, and undertakings not to re-let the dwallings were accepted in the remaining three cases.

## Improvement Grants

#### Discretionary.

Thirty nine formal applications covering forty dwellings were received, but two were rejected as the conditions of the grant could not be complied with. The total amount of the grants approved was £9090.15.0. in respect of thirty sight dwellings, which averaged £239. per dwelling. Three informal applications were also refused as the premises concerned were not suitable for grant purposes. A total of 268 formal applications have been considered by the Council since the Act came into operation but 22 have been withdrawn for various reasons.

Thirty five improvement schemes covering thirty eight dwellings were completed and the total grants amounted to £9,301, which averaged £245 per dwelling.

## Standard

Only one application was received in respect of the installation of a bath and wash hand basin, and the maximum grant of £30 was paid.

#### Loans

Seventeen applications for loans were dealt with, six to eract dwellings, and eleven to acquire. Loans were granted with one exception.

## Rent Act.

Only one application was received for a certificate of disrepair following service of notice of rent increase on the tenant. The owner submitted an undertaking within the time limit to carry out the prescribed repair works.

Again, no applications were received from landlords for cancellations of certificates of disrepair and the fact that only twenty applications ove been received for certificates of disrepari since this Act came into operation emphasis that very few landlords have taken advantage of their right to increase house rents.

## Agriculture (Safety, Health and Welfare Provisions)

# Act, 1956

## Sanitary Conveniences on Farms.

The number of agricultural holdings in the area has increased to 791.

No systematic inspection of such premises has been carried out, but advantage is taken when visits are made for other purposes. Where either private of public water supplies become available, there is a marked improvement with this particular service, and as many as eighteen new conveniences were observed. No statutory action was necessary.

# Factories Aets, 1937 to 1959

The number of premises registered under Part "A" of the Act remained at 25, and premises under Part "B" at 28.

Twenty inspections of factories were carried out furing the year and minor defects were found in two premises. The defects were remedied following informal action.

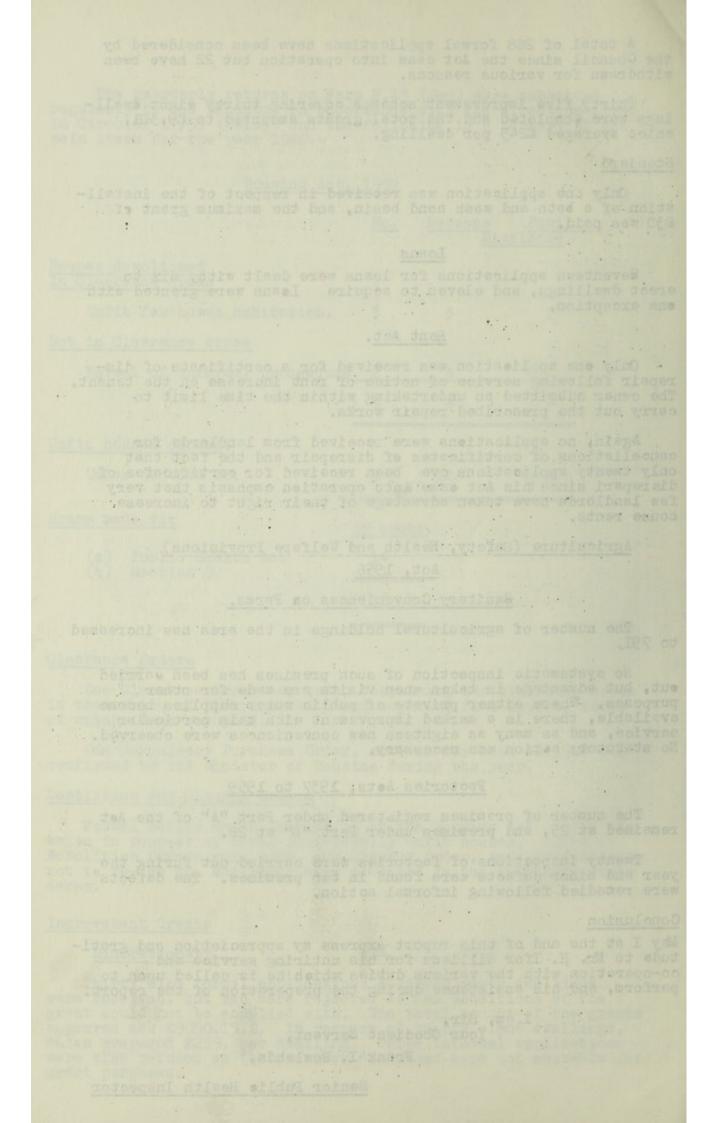

## Conclusion

May I at the end of this report express my appreciation and gratitude to Mr. H. Ifor Williams for his untiring service and co-operation with the various duries which he is called upon to perform, and his assistance during the preparation of the report.

> I am, Sir, Your Obedient Servent,

Frank I. Rowlands,

Senior Public Health Inspector
