BOROUGH OF BACUP

---

ANNUAL REPORT

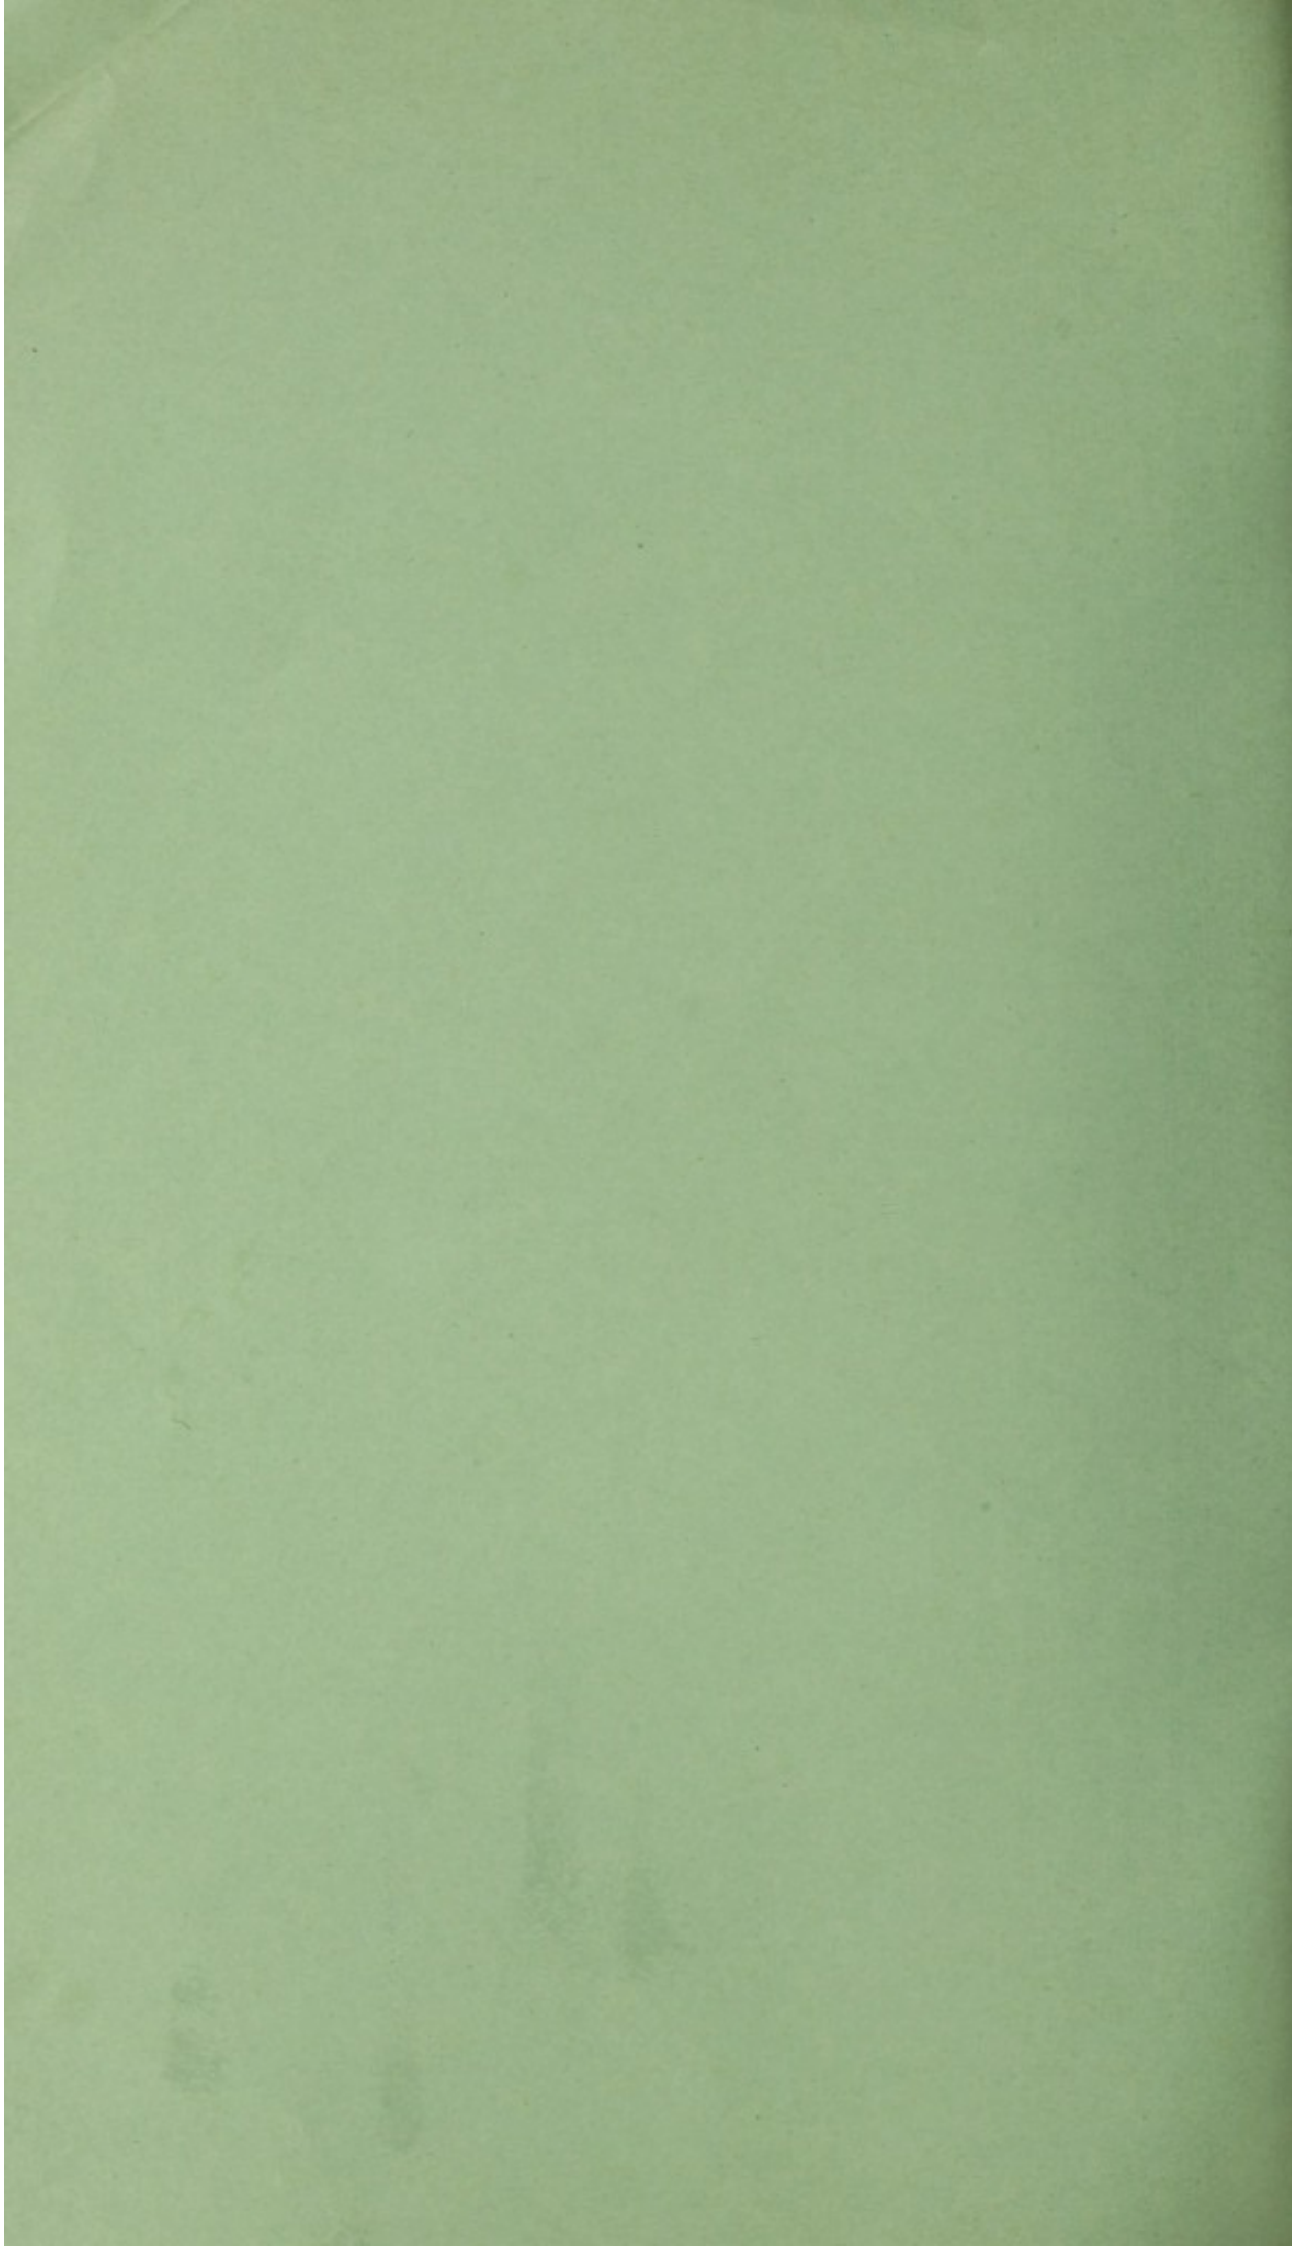

ON THE

PUBLIC HEALTH SERVICES

OF THE

BOROUGH OF BACUP

1958

# HEALTH COMMITTEE

MEMBERS OF THE HEALTH COMMITTEE 1958 - 1959

STAFF OF THE HEALTH DEPARTMENT

HIS WORSHIPFUL THE MAYOR, COUNCILLOR J. B. WALLEY, J.P.

(ex-officio)

SECTION I - VITAL STATISTICS

Comments on Vital Statistics

CHAIRMAN:

SECTION II - INFECTIOUS DISEASES

ALDERMAN A. LORD, J.P.

Tuberculosis

Polio-myelitis

VICE-CHAIRMAN:

German Measles

COUNCILLOR T. C. LAW.

Food Poisoning and Bacillary Dysentery

SECTION III - GENERAL HEALTH SERVICES

COMMITTEE:

Ante-natal clinics

Child welfare clinics

Health visiting

Vaccination and Immunisation

Home help service

Alderman J. Edge, J.P.

Alderman W. Marshall, J.P.

Alderman J. H. Hargreaves

Alderman Mrs. A. Rhodes

Councillor J. Ireland

SECTION IV - ENVIRONMENT

Social conditions

Water supply

Rivers and streams

Public cleansing

Closet accommodation

Eradication of bed bugs

Atmospheric pollution

Noise control

Swimming baths

Councillor R. Davies

Councillor T. E. East

Councillor A. P. Beaumont

Councillor J. Rushton

Councillor S. G. Pollard

Councillor R. Taylor, J.P.

STAFF OF THE HEALTH DEPARTMENT:

Medical Officer of Health

Chief Public Health Inspector

Additional Public Health Inspector

Pupil Public Health Inspectors

Clerk

G. Fyfe, M.B., Ch.B., D.P.H.

R. Haworth, M.A.P.H.I.

G. R. Millington, M.A.P.H.I.  
(31.10.1958)

E. Sutcliffe

D. B. Shalliker

Mrs. M. Taylor

HEALTH COMMITTEE

1938 - 1939

HIS EXCELLENCY THE GOVERNOR, CHAIRMAN

(ex-officio)

MEMBERS

MR. J. A. LAM, M.P.

VICE-CHAIRMAN

SECTION I

VITAL STATISTICS

Stubbylee Hall,

BACUP,

Lancs.

July, 1959.

To the Mayor, Aldermen and Burgesses  
of the Borough of Bacup.

Mr. Mayor, Ladies and Gentlemen,

I present, for your information, my report for the year 1958. The lay-out is unchanged. I would like to direct your attention to three things which are of great concern at the present time to this Health Department, as to many others. These are clean food, clean air and good housing. The last two are mentioned without comment for they have been the subjects of many discussions in Committee and elsewhere. I have commented on clean food, or to be more accurate, on food poisoning in Section II of my report.

Since this is the last report which I shall present to this Authority I cannot let the occasion pass without expressing my sincere thanks to all who have helped me during my period of Office, in particular my thanks are due to the Chairman and Members of the Health Committee and last, but not least, to Mr. Haworth and the Staff of the Health Department.

I am, Mr. Mayor, Ladies and Gentlemen,  
Your obedient servant,

G. FYFE.

Medical Officer of Health.

Strophylus Hall,

BACUP,

Lancs.

July, 1958.

To the Mayor, Aldermen and Burgesses  
of the Borough of Bacup.

Mr. Mayor, Ladies and Gentlemen,

I present, for your information, my report for the year 1958. The lay-out is unchanged. I would like to direct your attention to three things which are of great concern at the present time to this Health Department, as to many others. These are clean food, clean air and good housing. The last two are mentioned without comment for they have been the subjects of many discussions in Committee and elsewhere. I have commented on clean food, on the more accurate, on food poisoning in Section II of my report.

Since this is the last report which I shall present to this Authority I cannot let the occasion pass without expressing my sincere thanks to all who have helped me during my period of Office, in particular my thanks are due to the Chairman and Members of the Health Committee and last, but not least, to Mr. Haworth and the Staff of the Health Department.

I am, Mr. Mayor, Ladies and Gentlemen,  
Your obedient servant,

C. FIFE.

Medical Officer of Health.

## SECTION I

### VITAL STATISTICS

Once again a fall in the infant mortality rate is recorded. In 1957 this was 14 and in 1958 it was 9.8. I would refer Members once again to the quinquennial table (Table V). The last figure quoted there for infant mortality (1950 - 1954) was 30. The corresponding figure for the years 1954-1958 is 24.8. This is very satisfactory although it must be mentioned that the figure for England and Wales is 22.5.

The principal causes of death in the general population were again Cardiovascular disease (57%), Cancer (11%) and Respiratory Disease (8%) including, in particular, Bronchitis. This situation is now taken for granted and there is little I can add to what is already known and to what has already been said on this subject.

I would remind you that the vital statistics cannot reflect the whole picture of the public health. There is a great deal of morbidity of mind and body which cannot be expressed in statistical terms. Adolescent maladjustments, loneliness in the elderly and stress and anxiety at any age cannot be reduced to figures. Perhaps this is fortunate, provided that sight is not lost of their existence.

Food Poisoning and Bacterial Dysentery: I want to comment again on the absence of notifications of these illnesses. The extent of food poisoning and dysentery are indications of the hygiene standards in a community and in the public appreciation or lack of appreciation of the importance of hygiene. If the number of notifications was true then we could congratulate ourselves most heartily. Unfortunately it is not true, I think because cases are not notified or because some of those who are ill did nothing about it. The concept of a "chill" and the mistaken belief in its inevitability continues. In the absence of some serious organic disease persistent diarrhoea very rarely proves to be the absence of infection by germs. So far as food poisoning is concerned the Food Hygiene regulations supply part of the answer. They cannot, of course, obviate bad food handling practice in the home. So far as dysentery is concerned, spread is less likely through food and drink than it is through personal contact and the answer is to be found in the use of the wash basin and in the cleanliness of the toilet rather than in the kitchen. These diseases are endemic in this country and we must remember this fact is appreciated by all concerned the better it will be.

## VITAL STATISTICS

Once again a fall in the infant mortality rate is recorded. In 1937 this was 14 and in 1938 it was 9.8. I would refer Members now again to the fundamental table (Table V). The last figure quoted there for infant mortality (1930 - 1934) was 30. The corresponding figure for the years 1934-1938 is 21.8. This is very satisfactory although it must be mentioned that the figure for England and Wales is 22.3.

The principal causes of death in the general population were again cardiovascular diseases (57%), Cancer (11%) and Respiratory Diseases (8%) including, in particular, Bronchitis. This situation is now taken for granted and there is little I can add to what is already known and so what has already been said on this subject.

I would remind you that the vital statistics cannot reflect the whole picture of the public health. There is a great deal of morbidity of mind and body which cannot be expressed in statistical terms. Adolescent maladjustments, illnesses in the elderly and stress and anxiety at any age cannot be reduced to figures. Perhaps this is fortunate, provided that sight is not lost of their existence.

## SECTION II

### INFECTIOUS DISEASES

Other than cases of tuberculosis the notification of infectious diseases for 1958 were limited to Measles 99, Whooping Cough 23 and Acute Pneumonia 6.

Poliomyelitis: No cases were notified during the year. The aspect of most immediate concern is, of course, vaccination against this disease. Confidence in this means of protection is steadily increasing and considerable progress has been made. The vaccinations carried out have proved entirely satisfactory. It is appreciated that many people still require to be protected against Poliomyelitis, and with the vaccine being more readily available, it has been found possible to extend the age groups to whom it may be given, so as to include the age group ranging from 16-25 years. In addition, added facilities have been arranged whereby people requiring vaccination may attend either at their own general practitioner, at the Bacup Clinic, or at the factory sessions which have been specially arranged so as to cause a minimum of inconvenience, and to facilitate the service where a sufficient number of persons are employed.

Food Poisoning and Bacillary Dysentery: I want to comment again on the absence of notifications of these illnesses. The amount of food poisoning and dysentery are indications of the hygiene standards in a community and in the public appreciation or lack of appreciation of the importance of hygiene. If the number of notifications was true then we could congratulate ourselves most heartily. Unfortunately it is not true, I think because cases are not notified or because some of those who are ill did nothing about it. The concept of a "chill" and the mistaken belief in its inavoidability continues. In the absence of some serious organic disease persistent diarrhoea very rarely occurs in the absence of infection by germs. So far as food poisoning is concerned the food hygiene regulations supply part of the answer. They cannot, of course, obviate bad food handling practice in the home. So far as dysentery is concerned, spread is less likely through food and drink than it is through personal contact and the answer is to be found in the use of the wash basin and in the cleanliness of the toilet rather than in the kitchen. These diseases are endemic in this country and the sooner this fact is appreciated by all concerned the better it will be.

It is the wish of the clinic staff to instruct women in such matters as health during pregnancy, childbirth and the care of the new-born. This has been made difficult by the present premises used as a clinic. More pleasant and suitable premises will I hope soon be available. While attendances have been good, it will give much satisfaction if the new clinic comes to be regarded as a place with much to offer to all expectant mothers regardless of what other arrangements have concurrently been made.

Child Welfare clinic: The number of attendances was again increased and reached the 475 mark, which is the highest on record. The increased use of the clinic by children in the 1 - 5 age group was well maintained, but the fall off in the 6 - 10 age group in 1957 was fully recovered, and in fact shows considerable increase in this group. I am anxious to increase the attendance by older children if only to be satisfied that their mothers and fathers are still sufficiently interested in their future and well-being and development to wish to seek advice and to discuss problems which must constantly arise at such a time.

INFECTIOUS DISEASES

Other than cases of tuberculosis the notification of infectious diseases for 1958 were limited to Measles 99, Whooping Cough 23 and acute Encephalitis 6.

Polioepidemiology No cases were notified during the year. The most of most immediate concern is, of course, vaccination against this disease. Confidence in this means of protection is steadily increasing and considerable progress has been made. The vaccination carried out have proved entirely satisfactory. It is appreciated that many people still require to be protected against Polioepidemiology, and with the vaccine being now readily available, it has been found possible to extend the age groups to whom it may be given, so as to include the age group ranging from 15-25 years. In addition, child families have been arranged whereby people requiring vaccination may attend either at their own general practitioner, at the Bangor Clinic, or at the factory premises which have been specially arranged so as to cause a minimum of inconvenience, and to facilitate the service where a sufficient number of persons are employed.

Food Poisoning and Bacterial Dysentery I want to comment again on the absence of notifications of these illnesses. The aspect of food poisoning and dysentery are indications of the hygiene standards in a community and in the public appreciation or lack of appreciation of the importance of hygiene. If the number of notifications was true then we could congratulate ourselves most heartily. Unfortunately it is not true, I think because cases are not notified or because some of those who are ill did nothing about it. The concept of a "chill" and the mistaken belief in its inevitability continues. In the absence of some serious organic disease persistent diarrhoea very rarely occurs in the absence of infection by germs. So far as food poisoning is concerned the food hygiene regulations supply part of the answer. They cannot, of course, exclude all food handling practices in the home. So far as dysentery is concerned, spread is less likely through food and drink than it is through personal contact and the answer is to be found in the use of the warm basin and in the cleanliness of the toilet rather than in the kitchen. These diseases are endemic in this country and the sooner this fact is appreciated by all concerned the better it will be.

### SECTION III

#### GENERAL HEALTH SERVICES

The services to which this section relates are the primary responsibility of Divisional Health Committee No. 13, on which the Bacup Borough Council is represented. It would be wrong to consider the work of these two authorities separately and in fact only the closest integration of the services provided by the Borough on the one hand and the County Council on the other can achieve any outstanding measure of success. I have already referred to this aspect in my introductory letter.

The local health services include the following, some of which are the subject of later comment.

##### Care of Mothers and Young Children

- ante-natal and post-natal clinics
- child welfare clinics
- day nurseries and child minders
- work with problem families

##### Midwifery

##### Home Nursing

##### Health Visiting

##### Immunisation and Vaccination

##### Ambulance Service

##### Prevention Care and After-Care

- health education
- convalescence
- tuberculosis control
- mental health

##### Home Help Service

##### Welfare Services

Ante-natal clinics: These provide one means whereby perinatal and infant mortality may be reduced. The aim is to provide a service complementary to that provided by general practitioners and hospital clinics, so that constant advice and supervision is available and the early detection of abnormalities is made more likely. It is the wish of the clinic staff to instruct women in such matters as health during pregnancy, childbirth and the care of the new-born. This has been made difficult by the present premises used as a clinic. More pleasant and suitable premises will I hope soon be available. While attendances have been good, it will give much satisfaction if the new clinic comes to be regarded as a place with much to offer to all expectant mothers regardless of what other arrangements have concurrently been made.

Child Welfare clinics: The number of attendances was again increased and reached the 4751 mark, which is the highest on record. The increased use of the clinic by children in the 1 - 2 age group was well maintained, but the fall off in the 2 - 4 age group in 1957 was fully recovered, and in fact shows considerable increase in this group. I am anxious to increase the attendance by older children if only to be satisfied that their mothers and fathers are still sufficiently interested in their future and well-being and development to wish to seek advice and to discuss problems which must constantly arise at such a time.

## GENERAL HEALTH SERVICES

The services to which this section relates are the primary responsibility of Divisional Health Committee No. 1, on which the Group Borough Council is represented. It would be wrong to consider the work of these two authorities separately and in fact only the closest integration of the services provided by the Borough on the one hand and the County Council on the other can achieve any outstanding measure of success. I have already referred to this aspect in my introductory letter.

The local health services include the following, some of which are the subject of later comment.

## Care of Mothers and Young Children

- ante-natal and post-natal clinics
- child welfare clinics
- day nurseries and child minding
- work with problem families

## Mental Health

## Home Nursing

## Health Visiting

## Immunisation and Vaccination

## Ambulance Service

## Prevention Care and After-Care

## Health Education

## Counselling

## Tuberculosis Control

## Mental Health

## Home Help Service

## Welfare Services

Ante-natal Clinics: These provide one means whereby general and infant mortality may be reduced. The aim is to provide a service complementary to that provided by general practitioners and hospital clinics, so that constant advice and supervision is available and the early detection of abnormalities is made more likely. It is the wish of the clinic staff to instruct women in each section on health during pregnancy, childbirth and the care of the new-born. This has been made difficult by the present premises used as a clinic. More pleasant and suitable premises will I hope soon be available. While attendances have been good, it will give more satisfaction if the new clinic comes to be regarded as a place with much to offer to all expectant mothers regardless of what other arrangements have concurrently been made.

Child Welfare Clinics: The number of attendances was again increased and reached the 41st year, which is the highest on record. The increased use of the clinic by children in the 1 - 2 age group was well maintained, but the fall off in the 3 - 4 age group in 1957 was fully recovered, and in fact shows considerable increases in this group. I am anxious to increase the attendance by other children if only to be satisfied that their mothers and fathers are still sufficiently interested in their future and well-being and development to wish to seek advice and to discuss problems which must constantly arise at such a time.

Health visiting: I had hoped that the shortage of health visitors so far as it affected Bacup had been overcome. Unfortunately this has not been possible, as although the establishment has been increased to four health visitors, the making of appointments has not been possible as yet, and the number of visitors acting remains at three. Four visitors are necessary for the amount of work required to be done, and it is hoped that this temporary shortage of staff can be overcome in order that a fuller service can be given, as the present shortage confines our efforts largely to immediate essentials.

Vaccination and Immunisation: This has already been mentioned in Section II. I would add here that the number of children who received Diphtheria Immunisation was hardly maintained, and the number under the age of one year who were protected showed a slight decrease on figures for the previous year. In recent years the numbers have been:

	Male	Female	Total
	<u>0 - 15</u>		<u>0 - 1</u>
<u>LIVE BIRTHS</u>			
Legitimate	139	283	55 (19%)
Illegitimate	13	211	47 (22%)
1954		215	101 (47%)
1955		208	138 (66%)
1956		205	123 (62%)
1957			
1958			
<u>STILLBIRTHS</u>			

Home Help Service: It is still extremely difficult to increase the amount of home help service provided due to the difficulty in recruiting adequate staff. The figures, however, show a slight increase in the number of families assisted, the total number being 150 against 134 in the year 1957. Again, the type of case receiving home help service was confined almost wholly to chronic sickness or old age, and all but five were such cases. I am certain that such proportions as these were not the original intention of the scheme, and I am equally convinced that many "younger families" could profit by this type of help if only for a few days at a time.

Detailed information about sessions held at Bacup Clinic and about divisional staff together with statistics relating to the services mentioned in this section will be found in Appendix C (pages 15 - 18).

Death rate of infants under one year of age:-

All infants per 1,000 live births	9.8 (14)
Legitimate infants per 1,000 legitimate live births	6.7
Illegitimate infants per 1,000 illegitimate live births	32.5

#### DEATHS FROM CERTAIN SPECIFIED DISEASES

	Deaths	Rate per 1,000 of population
Cardio-Vascular Diseases	129	4.6
Cancer	25	1.4
Tuberculosis	2	.41
Bronchitis	10	.59
Other Respiratory Diseases	6	.33

Note: Figures in parentheses refer to the year 1957.

With visiting: I had hoped that the shortage of health visitors far as it affected Hong had been overcome. Unfortunately this has not been possible, as although the establishment has been increased to four health visitors, the making of appointments has been possible as yet, and the number of visitors acting remains three. Four visitors are necessary for the amount of work required to be done, and it is hoped that this temporary shortage staff can be overcome in order that a fuller service can be given, as the present shortage continues our efforts largely to immediate essentials.

Vaccination and Immunization: This has already been mentioned in section II. I would add here that the number of children who received Diphtheria Immunization was hardly maintained, and the number under the age of one year who were protected showed a slight decrease on figures for the previous year. In recent years the workers have been:

	1936	1937	1938
1936	282	282	282
1937	244	244	244
1938	242	242	242
1939	208	208	208
1940	208	208	208
1941	208	208	208
1942	208	208	208
1943	208	208	208
1944	208	208	208
1945	208	208	208
1946	208	208	208

1965	208	208	208
1966	208	208	208
1967	208	208	208
1968	208	208	208
1969	208	208	208
1970	208	208	208
1971	208	208	208
1972	208	208	208
1973	208	208	208
1974	208	208	208
1975	208	208	208
1976	208	208	208
1977	208	208	208
1978	208	208	208
1979	208	208	208
1980	208	208	208
1981	208	208	208
1982	208	208	208
1983	208	208	208
1984	208	208	208
1985	208	208	208
1986	208	208	208
1987	208	208	208
1988	208	208	208
1989	208	208	208
1990	208	208	208
1991	208	208	208
1992	208	208	208
1993	208	208	208
1994	208	208	208
1995	208	208	208
1996	208	208	208
1997	208	208	208
1998	208	208	208
1999	208	208	208
2000	208	208	208

Home Help Service: It is still extremely difficult to measure the amount of home help service provided due to the difficulty in recruiting adequate staff. The figures, however, show a slight increase in the number of families assisted, the total number being 150 against 124 in the year 1937. Again, the type of case receiving home help service was confined almost wholly to chronic ailments on old age, and all but five were such cases. I am certain that such proportions as these were not the original intention of the scheme, and I am equally convinced that many "younger families" could profit by this type of help if only for a few days at a time.

Detailed information about sessions held at Hong Kiang and about divisional staff together with statistics relating to the services mentioned in this section will be found in Appendix C (pages 15-16).

The following table shows the number of sessions held at Hong Kiang and the number of families assisted during the year 1937. The figures show a slight increase in the number of families assisted, the total number being 150 against 124 in the year 1937. Again, the type of case receiving home help service was confined almost wholly to chronic ailments on old age, and all but five were such cases. I am certain that such proportions as these were not the original intention of the scheme, and I am equally convinced that many "younger families" could profit by this type of help if only for a few days at a time.

# APPENDIX A

## VITAL STATISTICS AND CAUSES OF DEATH

TABLE I

SUMMARY OF STATISTICS - 1958.

Area (Acres)				6,121
Population (Estimated mid-1958)				17,990
Population (Census 1951)				18,374
Number of Inhabited Houses (1931)				5,964
Number of Inhabited Houses (1958)				6,693
Rateable Value				£132,692
Sum represented by a penny rate				£511
	Male	Female	Total	
LIVE BIRTHS

I have pleasure in submitting the report on the sanitary inspection and environmental conditions within the Borough for the year 1958.

The progress with slum clearance again made a step forward, and sites were cleared in the Bramwood Road, Hope Buildings, High Street, Shephard's View and Bankside, and a considerable number of Ulving Grange have made. Further schemes were envisaged, and reports were received from the Housing Department, and the Council, and the progress should shortly be evident.

Public Health Department,

Stubbylee Hall,

BACUP.

To the Mayor, Aldermen and Burgesses  
of the Borough of Bacup.

Mr. Mayor, Lady and Gentlemen,

I have pleasure in submitting the report on the sanitary inspection and environmental conditions within the Borough for the year 1958.

The progress with slum clearance again made a step forward, and sites were cleared in the Brandwood Road, Heys Buildings, High Street, Shepherd's View and Bankside Lane areas, and a considerable number of Closing Orders were made. In addition, further schemes were envisaged and representations made with regard to the clearance of further sites, and whilst these have not yet been completed, the schemes are in an advanced stage, and progress should shortly be evident. The difficult and hilly nature of the sites upon which the older houses are built again gave the Council considerable trouble due to the expensive nature of proper demolition so as to leave the cleared sites in a satisfactory condition. I am sure, however, that everyone concerned would still wish to see the general standard of housing conditions within the Borough improved as quickly as possible.

The service given with regard to the inspection of meat and other foods was maintained throughout the year as in the past, and I am pleased to be able to report that all the animals slaughtered within the Borough were again inspected and appropriate action taken.

Many routine inspections of the various premises within the town were carried out and improvements effected with regard to the handling and sale of food and the many miscellaneous ancillary trades.

Some effort was devoted to the question of smoke abatement, in particular with regard to the emissions from industrial furnaces, and several factories which previously emitted black smoke have now installed modern plant with resultant beneficial effects.

Staff difficulties in the department again caused considerable concern due to the national shortage of inspectors, and as yet it has been found impossible to fill the vacancy which occurred during the year. The staff of the Health Department have again given loyal and willing service, and my thanks are due to them for the help given during a most difficult period. I am grateful for the guidance and advice given by the Medical Officer of Health, and take this opportunity of thanking the Chairman and members of the Health Committee for their interest and support throughout the year.

I am, Mr. Mayor, Lady and Gentlemen,  
Your obedient servant,

R. HAWORTH.

Chief Public Health Inspector.

## SECTION IV

### ENVIRONMENTAL HEALTH SERVICES.

#### Social Conditions

**Chief Occupations.** The shoe and slipper trade and cotton weaving and spinning provide the chief industry in the town which is mainly industrial in character. There is some light engineering, stone quarrying and coal mining which also gives employment to a number of people in the district and in addition a number of mills which manufacture felted materials.

The country is hilly and there are many scattered hill farms with small dairy herds.

#### (A) SANITARY INSPECTION OF AREA

##### Water Supply

The main supply of water to the town is satisfactory, being provided by the Borough of Bacup Water Undertaking and a large percentage of the domestic properties enjoy a supply of water which is wholly sufficient and excellent in quality.

The whole of the water supplied by this undertaking is filtered and chlorinated and is collected from the upland surface gathering ground and stored in three main reservoirs at Cragg, Cowpe and Sheephouse.

Twenty three samples of the town's water were taken during the year and submitted for bacteriological examination, and twenty three were satisfactory.

Twenty four samples were submitted for chemical analysis and twenty four proved satisfactory.

The number of dwellinghouses supplied from the public mains is 6637.

##### River and Streams

The Mersey River Board is the controlling authority for the main river in the Borough and the Local Authority is responsible for the streams and the portion of the Irwell which joins on to the main river.

The River Irwell is used in connection with the Local Industries and widely used for trade effluents.

##### Public Cleansing

The household refuse collection is maintained on a weekly basis from all houses in the town, and approximately 7,000 dustbins are emptied weekly by the three side loading freighters each manned by a driver and four loaders.

Refuse disposal is carried out by controlled tipping at the two tips at Sharneyford and Blackwood, and the Council have in operation a salvage scheme.

Street cleansing is carried out under the supervision of the Borough Surveyor, and gully emptying is done by modern mechanical means.

One hundred and thirteen pail closets are emptied each week.

## ENVIRONMENTAL HEALTH SERVICES.

Social Conditions

Chief Occupations. The shoe and slipper trade and cotton weaving and spinning provide the chief industry in the town which is mainly industrial in character. There is some light engineering, stone quarrying and coal mining which also gives employment to a number of people in the district and in addition a number of mills which manufacture felted materials.

The country is hilly and there are many scattered hill farms with small dairy herds.

## (A) SANITARY INSPECTION OF AREA

Water Supply

The main supply of water to the town is satisfactory, being provided by the Borough of Bangor Water Undertaking and a large percentage of the domestic properties enjoy a supply of water which is wholly satisfactory and excellent in quality.

The whole of the water supplied by this undertaking is filtered and chlorinated and is collected from the upland surface gathering ground and stored in three main reservoirs at Grange, Corpe and Sheephouse.

Twenty three samples of the town's water were taken during the year and submitted for bacteriological examination, and twenty three were satisfactory.

Twenty four samples were submitted for chemical analysis and twenty four proved satisfactory.

The number of dwellings supplied from the public mains in 1937.

River and Stream

The Mersey River Board is the controlling authority for the main river in the Borough and the local Authority is responsible for the stream and the portion of the river which joins on to the main river.

The River Irwell is used in connection with the local industries and widely used for trade effluents.

Public Cleansing

The household refuse collection is maintained on a weekly basis from all houses in the town, and approximately 7,000 dustbins are emptied weekly by the three side loading freighters each manned by a driver and four loaders.

Refuse disposal is carried out by controlled tipping at the two tips at Barnsford and Blackwood, and the Council have in operation a salvage scheme.

Street cleansing is carried out under the supervision of the Borough Surveyor, and gully emptying is done by modern mechanical means.

One hundred and thirteen public closets are emptied each week.

## Closet Accommodation

The closet accommodation in the Borough consists mainly of fresh water closets, there being approximately 4,694 of these, and gradual abolition of the waste water closets is encouraged by the grants made by the Health Committee in respect of conversions. Details of the closets other than fresh water closets are given in Table XVIII, Appendix D.

Many of the back-to-back type houses have joint W.C., accommodation and this type of house would be greatly improved if separate indoor sanitary accommodation could be provided.

## Eradication of Bed Bugs

Hydrogen Cyanide is used in connection with the disinfection of household goods when transfers are made from infested property to Council houses, and others are treated with D.D.T. Solution and Spray.

These methods proved effectively particularly if a follow up spraying was performed and the advice given to tenants was acted upon.

## Atmospheric Pollution

Little trouble was experienced during the year by atmospheric pollution from smoke.

Many of the local industries are using electrically driven machinery to a great extent and it would seem that this is already having its effect on the amount of atmospheric pollution by smoke from steam raising plants. Much still remains to be done with regard to the atmospheric pollution caused by domestic chimneys and smokeless fuels and improvement in the design of domestic fireplaces will no doubt aid progress in this direction.

## Rag Flock

One licence was issued in respect of premises where Rag Flock is stored, whilst premises formerly used for the manufacture of Rag Flock was again not used.

The firm storing Rag Flock submitted many samples on their own account with satisfactory results.

## Rodent Control

This work is carried out in accordance with the recommendations of the Ministry of Agriculture and Fisheries, and the Council's sewers were treated on two occasions.

During the first treatment, carried out in May, 277 manholes were treated and 51 showed a prebait take, and as a result 117 poison baits were laid.

The second maintenance treatment carried out in November, necessitated the treatment of 155 manholes and 14 showed a prebait take.

In addition to this 15 business premises, 69 dwellinghouses and 4 local authority properties were treated.

## Swimming Baths

The Council own and administer the Public Baths which are situated in the centre of the town.

The new modern filtration and chlorination plant which was installed

## Closet Accommodation

The closet accommodation in the Borough consists mainly of fresh water closets, there being approximately 4,000 of these, and gradual abolition of the waste water closets is encouraged by the Grants made by the Health Committee in respect of conversions. Details of the closets other than fresh water closets are given in Table VIII, Appendix D.

Many of the back-to-back type houses have Joint W.O., accommodation and this type of house would be greatly improved if separate indoor sanitary accommodation could be provided.

## Disinfection of Bed Bugs

Hydrogen Cyanide is used in connection with the disinfection of household goods when transfers are made from infested property to Council houses, and others are treated with D.D.T. Solution and spray.

These methods proved effectively particularly if a follow up spraying was performed and the advice given to tenants was acted upon.

## Atmospheric Pollution

Little trouble was experienced during the year by atmospheric pollution from smoke.

Many of the local industries are using electrically driven machinery to a great extent and it would seem that this is already having its effect on the amount of atmospheric pollution by smoke from steam raising plants. Much still remains to be done with regard to the atmospheric pollution caused by domestic chimneys and factories and improvement in the design of domestic fireplaces will no doubt aid progress in this direction.

## Bag Block

One license was issued in respect of premises where Bag Block is stored, whilst premises formerly used for the manufacture of Bag Block was again not used.

The first storing Bag Block submitted many samples on their own account with satisfactory results.

## Noxious Control

This work is carried out in accordance with the recommendations of the Ministry of Agriculture and Fisheries, and the Council's sewers were treated on two occasions.

During the first treatment, carried out in May, 177 manholes were treated and 51 showed a prebait take, and as a result 117 poison baits were laid.

The second maintenance treatment carried out in November, necessitated the treatment of 155 manholes and 15 showed a prebait take.

In addition to this 15 business premises, 69 dwellinghouses and 4 local authority properties were treated.

## Swimming Baths

The Council own and administer the Public Baths which are situated in the centre of the town.

The new modern filtration and chlorination plant which was installed

during 1950 has led to greatly improved conditions from a public health point of view, and the public no doubt have now excellent conditions for bathing.

#### Factories

The sanitary accommodation in most of the factories within the district is reasonable in standard as more firms are realising the necessity of modern conveniences and recognise this as one of the necessities for attracting labour.

Table XIX, Appendix D gives a summary of the inspections made and details of the results.

#### Sanitary Inspection of the Area

Many of the owners of small cottage property still complain bitterly that the rents received do not allow for the increased cost of building materials and labour, and the efforts required to enforce statutory notices and informal notices requiring repairs, remains a major problem in the department.

The statement in Table XVII, Appendix D, shows the number and nature of the inspections made.

#### (B) HOUSING

The hilly nature of the district has led in the past to the building of many back-to-back, back-to-land and basement dwellings, and the prevalence of such a large proportion of these types of houses, which to-day cannot generally speaking be regarded as of a satisfactory standard, has created a difficult problem. This problem is one which requires constant attention, and whilst every endeavour is made to keep the old houses weatherproof, and in a reasonable state of repair, the work done is often not sufficient to render the old houses in all respects fit for habitation. In addition, the lack of amenities in numerous back-to-back houses is a matter of serious concern.

The Council proceeded with the building of new houses, 14 being completed by the Local Authority and more houses will shortly be ready for occupation.

It is difficult to assess the extent of overcrowding in the Borough in the absence of a proper survey, but it is known that some overcrowding exists.

Table XX, Appendix D, gives details of the new houses provided and also the action taken with regard to unfit dwellinghouses.

The Health Committee saw fit to make Closing Orders in respect of houses which were unfit for habitation and are, therefore, getting rid of the worst living conditions in the Borough. In addition a number of Clearance Areas were declared and the properties demolished, and more areas are at present under consideration.

#### (C) INSPECTION AND SUPERVISION

##### Milk Supply

The responsibility for the supervision of farms and the production of milk having passed to the Ministry of Agriculture and Fisheries, the main duty of the Local Authority was in connection with distributors of milk, and the registration of milk distributors, dairies or milk shops.

During 1950 has led to greatly improved conditions from a public health point of view, and the public no doubt have now excellent conditions for bathing.

Factories

The sanitary accommodation in most of the factories within the district is reasonable in standard as some firms are resuming the necessity of modern conveniences and recognising this as one of the necessities for attracting labour.

Table XIX, Appendix D gives a summary of the inspections made and details of the results.

Sanitary inspection of the axes

Many of the owners of small cottage property still complain bitterly that the rents received do not allow for the increased cost of building materials and labour, and the efforts required to enforce statutory notices and informal notices regarding repairs, remains a major problem in the department.

The statement in Table XVII, Appendix D, shows the number and nature of the inspections made.

## (5) HOUSING

The filthy nature of the district has led in the past to the building of many back-to-back, back-to-back and basement dwellings, and the provisions of such a large proportion of these types of houses, which to-day cannot generally speaking be regarded as of a satisfactory standard, has created a difficult problem. This problem is one which requires constant attention, and whilst every endeavour is made to keep the old houses well-maintained, and in a reasonable state of repair, the work done is often not sufficient to render the old houses in all respects fit for habitation. In addition, the lack of sanitation in numerous back-to-back houses is a matter of serious concern.

The Council proceeded with the building of new houses, it being completed by the Local Authority and more houses will shortly be ready for occupation.

It is difficult to assess the extent of overcrowding in the Borough in the absence of a proper survey, but it is known that some overcrowding exists.

Table XI, Appendix D, gives details of the new houses provided and also the action taken with regard to existing dwellings.

The Health Committee now fit to make Cleaning Orders in respect of houses which were unfit for habitation and are, therefore, getting rid of the worst living conditions in the Borough. In addition a number of Clearance Areas were declared and the properties demolished, and new areas are at present under consideration.

## (6) INSPECTION AND SUPERVISION

### Milk Supply

The responsibility for the supervision of farms and the production of milk having passed to the Ministry of Agriculture and Fisheries, the main duty of the Local Authority was in connection with distribution of milk, and the regulation of milk distributors, dairies or milk shops.

## Food Hygiene

Routine visits were made during the year to the premises in the Borough where ice cream is manufactured and the 71 premises where ice cream is sold by retail only.

The bulk of the ice cream which is sold in the town is manufactured by persons who have premises outside the Borough and little difficulty was experienced with this commodity. Much of the ice cream sold is now prepacked.

There were no cases of food poisoning during the year and details of the food condemned and surrendered are given in Table XXII, Appendix D.

### Slaughterhouses.

The Local Authority granted licences in respect of three slaughterhouses within the Borough during 1958, and the three slaughterhouses now appear to be operating satisfactorily.

### Meat Inspection

The operation of the three slaughterhouses above mentioned thrust a heavy burden on the Health Committee and the staff of the Health Department, as it is felt that 100% of the animals slaughtered should be inspected, and in addition the Committee feel that this inspection must be carried out at the time of slaughter in order to be effective.

Every endeavour, therefore, has been made to do this, and details of the animals slaughtered and the offals and meat condemned will be found in Table XXIII.

### (D) GENERAL

#### Petroleum Acts and (Carbide of Calcium) Order

The licensing of petroleum stores is a duty carried out by the Health Committee and 51 licences are at present in operation for the storage of petroleum spirit or mixture.

Two persons are licenced to keep carbide of calcium.

#### Hackney Carriages and Driving Licences

During the year 14 Hackney Carriage Licences were issued and 9 licences to drive Hackney Carriages.

#### Game Dealers Licences

Three licences to deal in game were renewed and issued.

#### Old Metal Dealers

One licence was issued to dealers in old metal.

Food Hygiene  
Borough where ice cream is manufactured and the 71 premises where ice cream is sold by retail only.

The bulk of the ice cream which is sold in the town is manufactured by persons who have premises outside the Borough and little difficulty was experienced with this commodity. Much of the ice cream sold is now prepared.

There were no cases of food poisoning during the year and details of the food concerned and circumstances are given in Table XIII, Appendix G.

#### Blanching Process

The Local Authority granted licences in respect of three blanching premises within the Borough during 1935, and the three blanching premises now appear to be operating satisfactorily.

#### Meat Inspection

The operation of the three slaughtering premises above mentioned thrust a heavy burden on the Health Committee and the staff of the Health Department, as it is felt that 100% of the animals slaughtered should be inspected, and in addition the Committee feel that this inspection must be carried out at the time of slaughter in order to be effective.

Every endeavour, therefore, has been made to do this, and details of the animals slaughtered and the officials and meat concerned will be found in Table XIII.

#### (D) GENERAL

##### Petroleum Acts and (Carbide or Calcium) Order

The licensing of petroleum stores is a duty carried out by the Health Committee and 51 licences are at present in operation for the storage of petroleum spirit or mixture.

Two persons are licensed to keep carbide or calcium.

##### Motor Carriages and Driving Licences

During the year 14 Motor Carriage Licences were issued and 9 licences to drive Motor Carriages.

##### Gas Dealers Licences

Three licences to deal in gas were renewed and issued.

##### Old Metal Dealers

One licence was issued to dealers in old metal.
