Report for the year 1957

Urban District of Bedworth

ANNUAL REPORT

OF THE

Medical Officer
of Health

INCLUDING THE

Chief Public Health Inspector's
Report for the year 1957

URBAN DISTRICT COUNCIL OF BEDWORTH

PUBLIC HEALTH DEPARTMENT,
COUNCIL OFFICES,
BEDWORTH.

March, 1959.

*To the Chairman and Members,
Bedworth Urban District Council.*

Mr. Chairman and Gentlemen,

I have pleasure in presenting to you the Annual Report on the health of Bedworth for the year 1957, together with the report of the Chief Public Health Inspector.

The period covered was before I took up my appointment with your Council and most of the work was done during the term of office of Dr. J. H. Briscoe-Smith who resigned on the 31st October, 1957. For the rest of the year Dr. Gordon Hird, Deputy Medical Officer of Health, was in charge, and I feel that your Council will wish me to thank him, on your behalf, for the efficient way in which he carried out the duties. I, too, would like to add my thanks to Dr. Hird for the way in which he initiated me into the workings of the Department.

I will confine my remarks to some comments on the vital statistics.

(i) POPULATION

The Registrar-General's estimate of the mid-year population for the Urban District was 28,640, which is an increase of 710. The natural increase, that is the excess of births over deaths, was only 19, so it would appear, therefore, that the Urban District is attracting people. No doubt the development of the industrial estate in Bayton Road is contributing to this satisfactory increase.

(ii) BIRTHS

There were 538 live births in 1957 of which 18 were illegitimate. There were also 9 still-births, making a total for all births of 547. The crude birth rate was 18.8 and that, multiplied by the comparability factor as issued by the Registrar-General gave a corrected birth rate of 16.9. The comparability factor which is issued by the Registrar-General is in order to compensate for the age and fertility distribution in the community as compared with that of the country as a whole. This corrected birth rate of 16.9 is only slightly lower than that of the previous year. The still-birth rate per 1,000 total births dropped from 25.9 to 16.5 which is a commendable decrease.

(iii) DEATHS

There were 522 deaths during the year giving a crude death rate of 18.2. This is the highest for many years, but in 1953 there came into operation regulations which affected the crude death rate because of transferable deaths. A glance at Table 2 will give some indication of the picture to-day. However, a large number of deaths can be attributed to High View Hospital which is situated in the Urban District and is a hospital for old persons run by the Coventry Corporation. To compensate for the discrepancies in age and sex distribution the Registrar-General issued a comparability factor which for the Urban District is 0.74. When the crude death rate is multiplied by the comparability factor the corrected death rate is obtained. For the year 1957 this corrected rate was 13.5 which is still higher than the previous year.

Of the 522 deaths, 91 were due to malignant diseases. This figure shows a considerable increase over that of 1956 when only 61 deaths were due to malignant diseases. When broken down further it will be seen that 17 of the deaths from malignant diseases in 1957 were due to cancer of the lung and bronchus as opposed to 11 in 1956. This increase in deaths due to cancer of the lung and bronchus is fairly considerable. There is much evidence to prove that there is some connection between smoking and the incidence of lung cancer and propaganda to this effect seems to be singularly ineffective, especially when directed to the adult community who have already established a smoking habit. It would appear that the most fruitful line of attack would be that directed towards young persons. Every endeavour should be made to discourage them from adopting this noxious habit and intensive education to this effect

should be given in all schools. There is, however, a great deal of difficulty in combatting the excellent propaganda put out by the manufacturers of various brands of cigarettes and tobacco and until our propaganda can match or better this, it would appear that we will continually be batting on a sticky wicket. Much research is now being carried out to discover if there is any significance between atmospheric pollution and lung cancer, and it is with pleasure that one notes that the Bedworth Urban District Council is a member of the Warwickshire Clean Air Council. However, until every member is aware of the problem of atmospheric pollution and is prepared to face the responsibilities imposed on all local authorities by the Clean Air Act, 1956, little progress will be made in the country generally.

196 deaths were due to diseases of the heart, an increase of 24 over the previous year. There was a substantial increase in the number of deaths due to coronary disease. Influenza accounted for 7 deaths whereas in 1956 there were no deaths due to this disease. It will be remembered that an epidemic of Asian 'flu swept through the world in 1957. It is with pleasure once again to record that there were no deaths due to Diphtheria, Whooping Cough, Measles, Poliomyelitis, or the common Infectious Diseases.

(iv) INFANT MORTALITY

There were 13 deaths in infants under the age of one year which gives an infant mortality rate of 24.2 as compared with that of 30.3 in the previous year and of 23.1 for England and Wales. Of these 13 deaths 11 were within the first month of life, and of these 11, 7 were associated with prematurity, and it would appear that by reducing the incidence of prematurity a great saving of infant life can be effected in the country as a whole and much research into the causes of prematurity is being conducted. The infant mortality rate cannot be materially reduced until there is some reduction in the neo-natal mortality rate.

(v) INFECTIOUS DISEASES

1957 was a memorable year as regards infectious diseases because of a Measles epidemic and a rather severe outbreak of Acute Poliomyelitis. There were 1,006 notified cases of Measles which were spread fairly evenly throughout the Urban District, except for Bulkington where only 21 cases were notified. Of the notified cases 949 occurred in the age groups 1 - 10, there being only one case of Measles in persons over the age of 25. There were 27 cases of Acute Poliomyelitis notified in the Urban District

as against 1 in the previous year. 14 cases were paralytic and 13 non-paralytic. Again, it is interesting to note that 19 of the 27 cases occurred in the 1 - 10 year age group, but that there were 3 cases in the over 25's. The disease used to be called Infantile Paralysis, but in view of the fact that it now attacks adults as well, the present name is more appropriate. The cases occurred throughout the six wards of the Urban District, but there were 10 in the Bedworth West Ward. The rate of .942 per thousand population is very much higher than for the country as a whole and was one of the highest in the country. The adjoining authorities of Coventry and Nuneaton also experienced sharp outbreaks but the one experienced in Bedworth was the heaviest. In view of the experience in 1957 it is rather surprising that more people have not taken advantage of the opportunity to have their children vaccinated against Poliomyelitis. It is to be hoped that in the future adequate artificial immunity produced by vaccination will prevent a recurrence of the experience of 1957. The large epidemic of Measles and the severe outbreak of Poliomyelitis threw a considerable strain on the Health Inspectorate and Clerical Staff. Painstaking investigations into home contacts, etc., had to be undertaken and this involved a great deal of work.

There was a welcome decrease in the number of cases of Dysentery and it is pleasing to report once again that there were no cases of Diphtheria in the district. There is no doubt that the virtual abolition of Diphtheria was due to the great efforts made in getting a large number of children immunised against the disease. The acceptance rate for Diphtheria immunisation has dropped considerably and has now reached a danger level. Diphtheria is still present in the country and at any time a large outbreak can be expected unless the level of immunity is considerably raised.

(vi) CONCLUSION

On the whole 1957 was a satisfactory year for the residents of the Urban District as far as health matters were concerned.

I would like to express my thanks to Mr. Deakin and the other members of the Health Inspectorate for the assistance they have given me and for making the takeover a smooth process.

To Miss Leach I would like to express my sincere thanks for the way she has dealt with all the work involved in the preparation of this report.

Yours faithfully,

G. DISON,
Medical Officer of Health.

C. GENERAL PROVISIONS OF HEALTH SERVICES FOR THE AREA

The General Practitioner Service is administered by the Warwickshire Executive Council; there are seven Medical Practitioners together with Assistants resident in the district, and two or three others living outside practice on the periphery.

There are no general hospital services directly available within the district, but adequate out-patient and in-patient facilities are provided at the Nuneaton and Coventry Hospitals, which are administered by Group No. 20 Hospital Management Committee of the Birmingham Regional Hospital Board. Cases of Infectious Disease are usually admitted to Whitley Isolation Hospital, Coventry. The bed accommodation for Tuberculous patients is provided mainly at Hertford Hill Sanatorium, near Warwick, but other Sanatoria within the Birmingham Region are used. Out-patient clinics for Tuberculosis are held at Riversley Park Clinic, Coton Road, Nuneaton, and The Quadrant, Coventry, and facilities for the diagnosis and treatment of venereal disease are available at Riversley Park Clinic, Nuneaton.

The Warwickshire County Council are responsible for the arrangements made for Domiciliary Nursing, Domestic Helps, Vaccination and Immunisation, the care of Mothers and Young Children, the Prevention of Illness, Care and After-Care, and the Ambulance Service under Part III of the National Health Service Act, 1946. With the exception of the Ambulance Service the administration of these services is under the control of the Area Medical Officer, Council House, Nuneaton.

The Ambulance Depot is adjacent to the Clinic, Newtown Road, Bedworth, where Infant Welfare Clinics and Clinics for School Children are held each week. These premises are also used for Ante-Natal, Ophthalmic, and Sunlight Clinics at which attendance is by appointment only. A modern, well-equipped Dental Surgery is situated at the Nicholas Chamberlaine School, where a School Dental Officer attends for the treatment of school children, and also of pre-school children and expectant mothers.

TABLE 13

Existing arrangements for all the Clinic Services provided by the Warwickshire County Council within the District are shown below:

SERVICE	SITUATION OF PREMISES	DAYS OPEN
Infant Welfare Centres (under 5 years)	Newtown Road, Bedworth	Mondays, Tuesdays & Thursdays, 2 to 4 p.m.
	Ryton Methodist Church Hall, Bulkington	Wednesdays, 2 to 4 p.m.
Antenatal Clinics	Newtown Road, Bedworth	Tuesdays, 9-30 a.m. to 12 noon
Mothercraft & Relaxation	Newtown Road, Bedworth	Wednesdays, 2 to 4 p.m.
School Health Service (5—15 years)		
Minor Ailments Clinic	Newtown Road, Bedworth	Mondays & Thursdays, 9 a.m. to 12 noon
	Keresley Newlands School	Alternate Fridays 10-30 a.m. to 12 noon
	Nicholas Chamberlaine School	Thursdays, 10-30 a.m. to 12 noon
Eye Clinic	Newtown Road, Bedworth	Mondays by appointment
Dental Clinic	Nicholas Chamberlaine School	Mondays, Wednesdays, Thursdays and Saturdays by appointment
Speech Therapy	Newtown Road, Bedworth	Mondays by appointment

DISINFECTION AND DISINFESTATION

Rooms disinfected after Infectious Disease	46
Rooms of verminous premises disinfected	55

E. SANITARY CIRCUMSTANCES OF THE AREA

WATER SUPPLY

The Water Supply of Bedworth is constant, and is obtained as follows:

- (a) *Two sources at the Newdegate Colliery, in the West Ward of the District.*
 - (i) From an adit in the Frank Shaft, 270ft. below ground surface.
 - (ii) From a 12in. borehole, 220ft. deep.
The total quantity of water from these sources for 1957 was 72,008,000 gallons
- (b) *20in. Borehole, Bedworth Waterworks.*
The borehole is 20in. in diameter and 275ft. deep.
The yield for 1957 was 82,280,000 gallons
- (c) *Exhall Deep Well.*
The well is 9ft. in diameter, and approximately 260—300 ft. deep. The yield from this well during the year was 3,967,000 gallons
- (d) *Coventry Corporation.*
This is used as a Supplementary Supply, and is only drawn upon when necessary. The quantity obtained from this source during 1957 was 6,314,000 gallons
- (e) *Birmingham.*
This is used as a supplementary supply, being piped via Nuneaton. The quantity obtained from this source during the year was 53,393,000 gallons

All this water is pumped into a storage reservoir at the Waterworks. The reservoir has a storage capacity of 750,000 galls., which is normally a 1.25 days' supply for the town. The water is pumped from the reservoir and boosted direct to the town. The Water Tower is now only used for night duty.

Total from all sources 217,962,000 gallons

The Exhall East and West Wards are in the Water Supply district of the City of Coventry, and are supplied by that Corporation.

The rural portions of the District obtain their supply from shallow wells.

As a result of the above it is considered that the Water Supply of the area has been reasonably satisfactory in quantity.

No. of samples of Town's water submitted for analysis .. 79

RAINFALL

The total rainfall for the year was 24.56 inches

The number of days when rainfall was recorded 168

The wettest month was September, when a total of 4.43 inches was recorded.

The average daily consumption of water in the District during 1957 was:

Domestic	497,937	gallons
Trade	37,087	„
Bramcote	55,096	„
Barnacle and Shilton, for Rugby R.D.C.	6,680	„
Total	596,800	„

The maximum consumption of water in any one day for all sources was

day for all sources was	695,000	gallons
Consumption per day per head of population	23.59	„
Population of Statutory Area	22,672	„
Population supplied into Houses	21,957	„
Population supplied by Standpipes	668	„
Total population directly supplied	22,625	„
Population without piped supply	47	„
Total hereditaments supplied	7,558	„
Houses with standpipes	172	„
Standpipes	68	„
Wells used for domestic supply	15	„

CARAVANS

Caravans directly supplied	167	„
Caravans supplied by standpipes	165	„
Caravans with supply inside	2	„
Population directly supplied (included in Total Population directly supplied)	376	„

TABLE 14

The latest Chemical analyses are as follows:

Results expressed in parts per 1,000,000.

Source	Free and Saline Ammonia	Albu- minoid Ammonia	Chlorine in Chlorides	Nitrogen in Nitrates and Nitrites	Oxygen absorbed from Permanganate at 80°F. in 4 hours	Total Solids dried at 100°C.	Nitrite	Free Chlorine	pH	Appearance	Plumbo- Solvency Iron

TABLE 15

The following table is based on the Ministry of Health's Report — "The Bacteriological Examination of Water Supplies," which classifies Piped Supplies as follows:

	Coliform Count per 100 ml.	Bact. Coli 1 Count per 100 ml.*
Class 1 Excellent	0	0
Class 2 Satisfactory	0-3	0
Class 3 Suspicious	4-10	0
Class 4 Unsatisfactory	Greater than 10	0 or more

* The presence of Bact. Coli 1 immediately places the sample in Class 4.

FOOD CONDEMNED DURING 1957.

DETAILS	WEIGHT		
	Cwts.	Qrs.	Lbs.
52 tins of Meat, Ham, Rabbit, Tongue, etc. ..	3	1	4 $\frac{3}{4}$
239 tins and jars of Jam, Fruit, Milk, Vegetables, Fish, etc.	1	3	3
Bacon			9
Sausages		3	$\frac{1}{2}$
Cooked Pork			14
Cheese			23 $\frac{1}{4}$
Cakes or Cake Mixture			1 $\frac{1}{4}$
1 pkt. Suet			$\frac{1}{2}$
TOTAL WEIGHT	6	1	- $\frac{1}{4}$

DISPOSAL OF CONDEMNED FOOD

All condemned meat from the slaughterhouses is conveyed to a private firm in Nuneaton for processing.

All other condemned food is collected by the Council's Refuse Department and disposed of by tipping with the normal household refuse.

FOOD CONDEMNED DURING 1957

Details	Weight		
	Cwt.	Gr.	Lbs.
52 tins of Meat, Ham, Rabbit, Tongue, etc.	3	1	42
234 tins and jars of Jam, Fruit, Milk, Vegetables, Fish, etc.	1	3	2
Bacon			0
Sausages		3	3
