REPORT.

To the CHAIRMAN and MEMBERS of the SANITARY DEPARTMENT of the TOWN COUNCIL.

GENTLEMEN,

I have the honour to submit to you my Annual Report for the year 1910, this being my twenty-sixth.

Area, 6,930 acres.

Population from last census, 1901 :—

Berwick,	8,270
Tweedmouth,	3,080
Spittal,	2,070

Number of inhabited houses up to date, 2,560.

Infant Mortality.—Number for whole District 31, against 25 last year (as given in Table I.), which is equal to a rate of 96 per 1000 births.

Comparative rate under 1 year :—

Berwick,	16=1.09	per 1000	of population.
Tweedmouth,	8=2.57	"	"
Spittal,	7=3.38	"	"

Annual Death-Rate.—225 nett (shown in Table IV.), 113 males, 112 females. This number is equivalent to a rate of 17.88 per 1000 of population for the whole Borough.

Comparative Annual Death-Rate of the three divisions :—

Berwick,	131=15.84	per 1000—last year	15.35
Tweedmouth,	48=15.58	"	" 10.00
Spittal,	46=22.22	"	" 14.97

Annual Birth-Rate.—321, viz., 168 males, 153 females, which is equivalent to a rate of 24 per 1000 of whole District.

Comparative Birth-Rate of the three places :—

Berwick,	186=22.40	per 1000—last year	24.78
Tweedmouth,	85=27.59	"	" 25.64
Spittal,	50=24.41	"	" 28.00

Notifications of New Cases of Sickness.—Diphtheria 63, scarlet fever 39, erysipelas 7, puerperal fever 1, measles (not notifiable) 1—total 111.

Scarlet fever had been imported from outside the district the previous year, chiefly by individuals travelling in trains and by railway drivers; but as I am now penning my Report, I am happy to be able to state that the district is nearly free from it. Also I am happy to be able to say that not a single death resulted from it.

Diphtheria occurred the year previous, especially the latter part of that year. Some sporadic cases sprung up in different parts, but it was only in October the outbreak really began, and it has continued up to the present time. An abatement was noticeable on the arrival of the frost, only to begin again on its ceasing. It was of a mild type and scattered over the whole Borough, so that I could not say that one portion suffered more than another.

Some few cases have been traced to defective drains, and some to surface gullytraps, but the great bulk of the cases could not be traced to any special cause, if not from aerial bacteria during the very open winter; but I am glad to be able to state that the death-rate has not been much augmented by it, as only three cases succumbed.

A member of the family of one house having a dairy attached was attacked with the complaint, but the Inspector and myself very promptly had the family isolated and all dairy utensils removed, and communication with the byre and house stopped, so that no infection could be carried.

Four cases of pulmonary tuberculosis were notified under Board's Order, 1908. These have been treated with disinfectants.

Dairies and Cowsheds Acts.—The milk from many dairies in the adjacent country is used in Berwick, which being outside the Borough are not therefore supervised by the officers of the Berwick Authority; but the 49 registered dairies and the 6 milk shops have been visited to prevent the spread of disease. There are 207 cows belonging to the dairies under inspection.

The owner of one cowshed was served with a notice for overcrowding and mixing horses and cows, but that state of matters has been remedied by the erection of a new shed.

The cows inspected seem very healthy animals, and there was no fault to find with any of them during the year. We did not come across a single one suffering from tuberculosis, against 4 the previous year, which were slaughtered.

The milkshops are kept in a very satisfactory state, although they require frequent watching as to the keeping of covers on jars. I certainly think the infection of diphtheria before referred to did not come from the milk source, and I am equally sure it did not emanate

from the water supply, as eight public supplies were submitted for analysis, one well twice (Tanyard Well), and these were all declared pure and drinkable by the public analyst.

Spittal, though drained many years ago, still retains the ashpits and pail-closets, which I have so frequently complained of. It is said that the water supply is not in sufficient quantity to enable proprietors to adopt w.c's and abolish these disease traps. Therefore I do hope that, wherever the levels will allow, the water-carriage system will be adopted without delay.

About the insanitary state of Tweedmouth I do not wish to say much, it being admitted on all sides that that place could not possibly be worse, with its abominable odours and unsightly channels and the liquid excreta flowing along them. It is often said that Tweedmouth is healthier than Berwick; that may be so, for the same circumstances do not obtain in the former place, viz., the working men are more of the *bona fide* class, and have not the numbers of casuals as are located in Berwick, are better clad, better fed, better housed, and are therefore better able to resist attacks from their insanitary surroundings, such as the want of a proper water supply and drainage; but given those advantages, would not the death-rate be still more reduced?

Common Lodging Houses.—These have been periodically visited, and on no occasion during the year was there any reason to find fault with them; while no disease had been reported.

The Slaughter Houses are visited periodically, and are in a very satisfactory state, being thoroughly washed and disinfected after each operation. The Cattle Market also receives careful attention under the supervision of the Inspector.

Dead Meat Supply.—A great number of bullocks and sheep are slaughtered here for the London market, but while the living animals are inspected by the Veterinary Surgeon, there is no Inspector under this Act. Under this head I had occasion to condemn as unfit for human food three cods in a decomposed state in a fishmonger's shop.

Food and Drugs Act.—The Inspector (Chief Constable) reports that 40 samples were sent for analysis and found satisfactory.

Overcrowding.—I have visited during the year 13 houses which were served with notices, and the nuisances were abated. In an old place like this there are many old dwellings which call for constant notices being served on the landlords for dilapidation in properties, and I must say there are many old buildings which, instead of patching them up as has been done, would have been better pulled down

had the displaced people anywhere to house their bodies in ; but the unfortunate high rates that localities complain of is always a stumbling block to improvement. I do hope the day is not far distant when some plan will be adopted for the housing of the poor.

Factory and Workshop Act.—Bakers and confectioners 23, joiners and cabinetmakers 13 ; coachmakers, blacksmiths, boilermakers, spadeworks, and electric works, 26 ; tailors 10, dressmakers 15, sausage and tripe makers 13, printers 5, painters 6, roperies 7, saddlers 3, boot and shoe makers 13, artificial manure manufacturers 4, chemical works 1, herring curers 8, photographers 3, plumbers 6, mineral water manufacturers 3, maltsters 3, flour mill 1, laundries 4, jewellers 3, coffee grinder 1, seed crushers and oilcake makers 4, cycle workshops 7—total, 182.

All these places are periodically visited, are very satisfactory, and only require a formal notice when not in a sanitary state to have defects remedied. One bakehouse, on inspection, was found to be not very clean, and on giving the owner warning it was put all right. One artificial manure manufactory required an extra door for the separation of the sexes, and on H.M.I. asking me to look into the matter, I had no difficulty in getting compliance to the request.

I visit the bakehouses every three months, and the other places generally twice a year, and I must say they are kept in a very satisfactory state.

Improvements Effected.—Ravensdowne carriage-way has been tar-macadamised, which is a very great improvement. The upper part of Castlegate has been repaved and footpaths cemented, which has done away with all the inequalities, so that now there are no dirty spots. Quay Walls are in process of being laid with cement blocks, and gradually all the dirty places are disappearing.

I have visited 30 sailing ships and steamers from foreign parts, and found all the crews healthy, each having a clean bill of health.

Requirements.—Water for Tweedmouth and Spittal, and drainage for Tweedmouth. Pail-closets to be abolished in Spittal. Houses for the poor.

I have the honour to be,

GENTLEMEN,

Your obedient servant,

D. HEAGERTY,
Medical Officer of Health.
