"The strong thing is the just thing."

*Carlyle.*

'Tabloid' marks the work of Burroughs Wellcome and Company.

The use of the word is to enable the physician, chemist and patient to get the right thing with one short word, instead of the firm's long name.

If another maker applies the word to his product, the act is unlawful. 'Tabloid' is our registered trade-mark.

If a vendor disregards it, in dispensing or selling, the act is unlawful—for the same reason.

We prosecute both offenders rigorously, in the interest of physicians, chemists, patients and ourselves.

Please inform us of any instance of either offence.

## ANTIENNT CYMRIC MEDICINE

---

ALTHOUGH the early history of medicine in Wales is pregnant with interest, apparently little research has hitherto been devoted to it, and the references are scanty. Such information as has been gathered is fascinating in the extreme, and has amply rewarded investigation.

Medicine is said to have been included among "the nine rural arts known and practised by the ancient Cymry, before they became possessed of cities and a sovereignty," that is, before the time of Prydain ab Aedd Mawr, about 1,000 years B.C.

In that early period, the priests and teachers were the Gwyddoniaid, or men of knowledge, who were looked upon as being the chief sources of wisdom in the land. As among other early peoples, the Cymric priests of the Gwyddoniaid combined the office of healers of the body with that of teachers of religion.

It is to these men that the inception of the antient art of healing in Wales is attributed. The three sciences which they chiefly studied were astronomy, theology, and medical botany. The remedies they used in the treatment of the sick were mainly confined to herbs.

During the reign of Prydain, the Gwyddoniaid became divided into three orders, which consisted of the Druids, the Bards, and the Ovates, each of which had its peculiar duties as well as privileges.

The Druids were especially proficient in mystic and religious rites, and medicine; the Bards in oratory, poetry, and music; and the Ovates in natural sciences.

“ . . . save when meditation  
Gives place to holy rites; then, in the  
grove,  
Each order has its rank and station.”

As early as the year 430 B.C. (before the time of Hippocrates), there is evidence from the laws of Dyvnwal Moelmud, which were written about that period, that the art of medicine was protected and encouraged by the State. Therein medicine, commerce and navigation are called the three civil arts, each of which had a peculiar corporate privilege. This privilege is stated to have been “ by the grant and creation of the lord of the territory, authenticated by the judicature, and distinct from the general privileges of a country and kindred.”

It is probable that the Druids and Ovates became possessed of some knowledge of Grecian medicine through the Phœnicians, or the Etruscans, who traded with Britain, for in later times the name of Hippocrates is mentioned, and his works were much esteemed by the physicians of Myddfai.

The antiquity of the Druidic study of medicine is recorded by several of the early historians, and Strabo mentions that the Druids were acquainted with physiology.

The system of medical treatment, apart from their superstitious rites, was distinctly

DRUIDICAL CELEBRATION OF A MYSTIC RITE.

Druids were acquainted with physiology. The system of medical treatment, apart from their superstitious rites, was distinctly

During the reign of Tiberius the  
Gordianus became divided into three

Druidical Rites

rational. They first devised the means most likely to operate, and then called in the aid of their religion, which was influenced by the peculiar superstitions of the time.

For internal diseases and lingering complaints they appear to have chiefly conjoined the cold bath, exercise and change of place, with the administration of herbs and simples. Important assistance was rendered by drinking from certain wells, the waters of which had special mineral properties. They devised general prescriptions for the preservation of health, in the form of short maxims or aphorisms, commending cheerfulness, temperance, exercise and early rising.

The Druids devoted considerable time to the study of the medicinal properties of plants, and they believed some herbs to be endowed with magical virtues. Prominent amongst these was vervain, used to anoint the person, to prevent fevers, to procure friendships, and to obtain all the heart desired.

To preserve its mysterious properties, it was necessary to gather the plant with certain ceremonies at the rise of the dog-star, at a time when both the sun and moon were beneath the horizon. Before digging up vervain, the earth had to be propitiated by a libation of honey, and the left hand only was to be used. When uprooted, the plant was to be waved aloft, and the leaves, stalks, and roots dried separately in the shade. Vervain formed one of the ingredients in the mystical cauldron of Ceridwen.

With respect to the mistletoe, Pliny states that "the Druids held nothing so sacred,

### ARCH-DRUID.

Arch-Druid wearing the breast-plate of justice,  
and holding the golden sickle.

provided the tree on which it grew was an oak." They deified the mistletoe, and were not allowed to approach it, save in the most devout and reverential manner.

"They make choice of oak groves in preference to all others," he continues, "and perform no rites without oak leaves. They think whatever grows on these trees is sent from heaven, and is a sign that the deity has made a choice of that tree."

"As the mistletoe is seldom to be met with, when found it is fetched with great ceremony on the sixth day of the moon, which with them begins the months and years, and the period of thirty years, which they term an age, for at that season the moon has sufficient influence, and is about half full.

"They call this plant in their own language 'All-heal,' and after preparing for the sacrifice and feast under the tree, they bring up two white bulls whose horns have then been bound for the first time. The Arch-Druid, habited in white, mounts the tree, and with a gold sickle cuts the mistletoe, which is received in a white cloth. The victims are then sacrificed, and prayers are offered to the deity, to render his gift favourable to those to whom they distribute it. They suppose that it renders fruitful every animal that drinks a decoction of it, and that it is a remedy against all sorts of poisons."

Besides the many other medicinal virtues attributed by the Druids to the mistletoe, which is still known by the old Druidical name of "All-heal" in Wales, it was especially valued as a preventive of

### THE SACRED GOLDEN SICKLE.

“Perched on the tree that bears the golden bough,  
Through the green leaves the glittering shadows glow,  
As on the sacred oak the wintry mistletoe;  
He seized the shining bough with gripping hold,  
And rent away with ease the lingering gold.”

*Æneid.*

The Druids ascribed mysterious powers to the mistletoe, when it was found growing on an oak. At the close of the year a solemn procession was formed, consisting of all three druidical orders. The word passed from mouth to mouth: “The New Year is at hand, gather the mistletoe.” A priest ascended the tree, and with a golden sickle cut the mistletoe, which was received on a white linen cloth spread upon the ground.

sterility, and was so regarded as an important factor in increasing and perpetuating the race.

The *Lycopodium Selago*, or hedge hyssop, was another plant highly esteemed by the Druids, and was employed by them in the treatment of affections of the eyes. Like the mistletoe, it was gathered with the greatest care. Nothing made of iron was allowed to touch it, nor was the bare hand thought worthy of that honour, but a peculiar vesture or *sagus* was applied by means of the right hand.

It was necessary that the vesture should be holy, and that it should have been taken from some sacred person privately, and with the left hand only. The gatherer must be a Druid clothed in white, his feet bare, having been washed in pure water. He had first to offer a sacrifice of bread and wine before proceeding to gather the plant, which was finally carried from the place where it grew, in a clean new napkin.

In the "Kadir Taliesin" the Selago is called "The Gift of God," Davydd (the subduer); and in modern Welsh it is termed "Grâs Duw," or "The Grace of God."

This plant was also regarded as a charm which would protect the owner against all misfortune.

The *Samolus*, or marsh wort, was supposed by the Druids to possess supernatural powers, and to be able to ward off, and to cure, certain diseases. The Cymric name for this plant was "Gwlydd."

There can be no doubt that the Druids carefully studied the properties of plants, and were skilful in the treatment of some

HOWEL DHA  
AUTHOR OF "HEN LYFR Y TY GWYN."

The "Book of the White House" was the first codification of Cymric law

"Howel the Good, of Dyfed, constituted and gave lawes to be kept through his dominions, which were used in Wales till such time as the inhabitants received the lawes of England in the time of Edward I, and in somme places long after. These lawes are to be seen at this daie both in Latin and Welsh." Thus wrote Caradog of Llancarvin, but the original parchments were lost before 1300, although some fairly well authenticated extracts are still in existence. The "White House" is supposed to have been situated near what is now Whitland, in Carmarthenshire.

diseases, but how far their medical knowledge extended there is little evidence to show. Borlase asserts that they had a knowledge of anatomy, and demonstrated on the bodies of living men; but no evidence in proof of this statement has been produced.

Leaving the druidical period, the next historic reference to early Cymric medicine is made by Taliesin, who was "Chief of the Bards" in the 6th century.

This eminent chieftain was learned in medicine and physiology. He wrote of the body:—"There are three intractable substantial organs—the liver, the kidney and the heart. There are three intractable membranes—the dura mater, the peritoneum, and the urinary bladder. There are three tedious complaints—disease of the knee joints, disease of the substance of a rib, and phthisis, for when purulent matter has formed in one of these, it is not known when it will get well."

Between the sixth and the tenth centuries, little is known of the condition of medicine in Wales, for the country was torn by feuds and wars until the time of Howel Dha, named Howel the Good, who lived about 930 A.D. This monarch prescribed a code of laws, in which some very interesting references are made to the practitioner of medicine of that period.

One of the laws deals with the office and privileges of a mediciner or physician to the Royal Court, with an account of his duties and fees.

The court physician or mediciner was granted free land and a horse, and was also entitled to receive his linen clothing

STONEHENGE.

"Our Man...  
"Our Man..."

from the Queen, and his woollen clothing from the King.

His seat in the hall within the palace, was at the base of a pillar near to the King, and his lodging was with the chief of the household.

His duties consisted in administering medicine gratuitously to all within the palace, and to the chief of the household.

He was to receive nothing from them "except their bloody clothes, unless it be for one of the three dangerous wounds, which are a stroke on the head unto the brain, a stroke on the body unto the bowels, and the breaking of one of the four limbs." For every one of these three dangerous wounds, the mediciner was to have nine score pence and his food, or one pound without his food, and also the patient's bloody clothes.

The mediciner was entitled to receive the following fees in certain circumstances.

"For applying a tent—24 pence.

"For an application of red ointment—12 pence.

"For an application of herbs to a swelling—4 legal pence.

"For letting blood—4 pence."

The mediciner was to take an indemnification from the kindred of a wounded person in case he died "from the remedy he shall use, and if he do not take it, let him answer for the deed."

He was to accompany the armies.

He was never to leave the palace but with the King's permission.

STONEHENGE RESTORED.

He was free to travel the road and out of the road along with the messenger of the sick.

It was lawful for anyone to take another's horse to procure a medical man for a person in danger, without being required to make amends.

The next authentic account of Cymric medicine dates from the early part of the thirteenth century, when flourished Rhys Gryg, a son of Rhys ab Gruffydd, who was a prince of South Wales. He was a great soldier, and took a prominent part in the feuds of the time. According to antient custom, he had his domestic physician, named Rhiwallon, who was assisted by his three sons, Cadwgan, Gruffydd, and Einion, and lived at a place called Myddfai in the county of Carmarthenshire. Under his patronage these physicians made a collection of medicinal recipes applicable to various diseases of the body "as a record of their skill lest no one should be found with the requisite knowledge as they were." Many of these prescriptions had been used in Wales from time immemorial, and some may be actually traced back to the time of Howel the Good, if not indeed to the sixth century.

The physicians of Myddfai, however, collected them, and put them in writing for the first time, and thus the valuable record of the medical knowledge of this early period has been handed down to us.

The manuscript consists of 188 paragraphs, which include some most interesting information on anatomy, physiology, medicine, surgery, pathology, materia medica and therapeutics.

ANTIENT CYMRIC WAR CHARIOT GOING INTO BATTLE

The first part deals with the treatment of various diseases, such as pneumonia, fevers, ascites, peritonitis, and many others. The surgery is of a somewhat advanced character. The general practice seems to have been to attempt the removal of any tumour or diseased condition, first by drugs taken internally or applied externally, and when these means failed, to resort to the knife or the cautery. Lithotomy and trepanning the skull are specially mentioned, and ligaturing hæmorrhoids was practised. The following examples are of some of the aphorisms given in the manuscript:—

“ There are three bones in a man’s body which when fractured will never unite again, and neither of these exists when a man is born, namely, a tooth, the knee-pan, and the os frontis.”

“ The physician’s three master difficulties are a wounded mammary gland, a wounded knee-joint, and a wounded lung.”

The materia medica mentioned in the manuscript comprises about 175 plants, flowers, roots, etc., the list including foxglove, poppy, valerian, peppermint, broom, etc. The preparations of these were generally in the form of infusions, decoctions, pills, or ointments. In the latter part of the manuscript there is given a large number of recipes recommended for various complaints. The following are examples:—

“ *For Eczema.* — An unguent of honey of ivy, fox-marrow and white resin.

BURIAL OF AN ANTIEN CVMRIC  
CHIEFTAIN.

“*For Deafness.*—Ram’s urine and eel’s bile, and the juice of ash, and express into the ear.

“*For a Punctured Wound.*—Take the dung of a bull and apply thereto.

“*To induce Sleep.*—Take poppy heads, bruised in wine.

“*For Falling Sickness.*—Burn a goat’s horn, directing the smoke upon the patient, and in consequence of the smell, he will forthwith rise. Before he has risen from the ground, apply dog’s gall upon his head, and the disease will not attack him any more.”

The physicians of Myddfai laid down a regular course of hygiene, in which an enema or an emetic was recommended to be used every month.

Rhiwallon and his sons first became physicians to Rhys Gryg, lord of Llandovery and Dynevor Castles, who gave them rank, lands, and privileges at Myddfai for their maintenance in the practice of the art of healing, and for the benefit of those who should seek their help.

Their fame soon spread, and their services were in demand throughout the country.

The descendants of this antient family of physicians continued to practise medicine in Wales without a break until the middle of the eighteenth century, when the last lineal descendant of the family died, in 1743.

A distinct advance is shown in the knowledge of medicine in another early Cymric manuscript, said to have been compiled by Howel the Physician, who was a son of Rhys, who was a son of

Double Cromlech at Plas Newydd in Anglesea

Cromlech in Anglesea.

## WELSH CROMLECHS OR DOLMENS

Some very fine cromlechs still exist in Wales, the uses of which have been differently explained. One belief is that they are the remains of great stone altars upon which human sacrifices were offered in the mysterious druidic rites, another that they were monumental memorials, marking the burial-places of heroes of a period even anterior to that of the Cymric chiefs.

Llewellyn, who was a son of Philip the Physician, who was a lineal descendant of Einion.

A large portion of this manuscript is devoted to dietetics, and includes a table containing many quaint directions for the regulation of diet in health and disease. Emetics, purgatives, suppositories, and cordials are frequently recommended, and baths of various kinds are mentioned. Bleeding was recommended occasionally, and local applications, such as poultices and counter-irritants, are frequently alluded to.

The exact date of this manuscript is not known, but it was probably written about the end of the fifteenth century. The work is divided into about 815 paragraphs, and begins with a number of conjectures as to the exciting causes of various diseases, such as the following:—

“Fever is excited by excess of heat and cold.”

“Eruptive poison in the blood, or tumours, are produced by irregularities of eating and drinking, obstructions in the stomach, veins, or other hollow vessels of the body, so that the food, drink, blood, or humours cannot pass on as usual.”

“A boil or carbuncle, or plague, are occasioned by the entrance of poison into the system.”

“From these proceed all fevers and diseases incident to the human body, and by the aid of active remedies they are cured.”

Gout was attributed to a “desiccation of humours into a calcareous earth.” Paralysis was said to be due to the blood becoming

### THE ORIGIN OF THE BROAD ARROW.

The above antient Cymric symbol, called the "three rods or rays of light," signified the eye of light, or the radiating light of intelligence, shed upon the druidic circle. This symbol was appropriated by King Edward III, and adopted as one of his badges. It was also borne by his son, the Black Prince, and by other Princes of Wales. The Broad Arrow occurs as a mark of the royal household as early as 1386, and after 1693 was used as a mark for Government stores.

sluggish or viscid in the veins. Brain fever was stated to be occasioned by water under the fontanelle pressing upon the brain and membranes. Consumption was regarded as due to an eruptive poison in the blood.

In this manuscript are mentioned eight hundred plants, flowers, roots, etc., many of which are used in medicine at the present day. Among the inorganic substances, sulphate of copper, alum, mercury, sulphur, antimony and lead were employed. Of the recipes given in this manuscript, the following are some curious examples:—

*“For Worms in Children.*—Take the child’s hair; cut it as small as you can, and mix as much as will stand on a golden crown with the pulp of a roasted apple or with honey. With this you will kill the worm.”

*“To Extract a Tooth Without Pain.*—Take some newts, by some called lizards, and those nasty beetles which are found in ferns in the summer time. Calcine them in an iron pot, and make a powder thereof. Wet the forefinger of the right hand, and insert it in the powder, and apply it to the tooth frequently, refraining from spitting it off, when the tooth will fall away without pain. It is proven.”

*“For Pain in the Eye.*—Take the gall of a hare, of a hen, of an eel, and of a stag, with fresh urine and honeysuckle leaves, and then inflict a wound upon an ivy tree, and mix the gum that exudes from the tree therewith, boiling it quickly, and straining it through a fine linen cloth. When cold, insert a little thereof in the corner of the eye, and it will be a wonder

## THE WELSH HARP.

"TELYN AWR TELYNORIOU."

(The Golden Harp of the Harpers.)

Only three musical instruments are known to have been used by the antient Cymry, the crwth (rude violin), the pibcorn (hornpipe) and the harp. The earlier Triads specify "the playing of the harp" as one of the three signs distinguishing a freeborn Briton from a slave. Giraldus states, that the antient Britons "greatly excelled all western nations not only in harmony but also in the ingenuity of their songs and extemporizations."

if he who makes use of it does not see the stars in mid-day in consequence of the virtues of this remedy.”

“*For Stranguary and Stone.*—Take the blood and skin of a hare and make a powder thereof ; mix with the cyder of red-rinded apples, mead, or beer, and drink it with either. Let the patient drink this only, and it will disintegrate the stone, causing it to be expelled. If you should wish to prove this, take a spoonful of this powder with water, and put it in a hole made in an acid stone, and by next day it will certainly have dissolved it.”

“*An Ointment for General Use.*—Take a gander’s fat, the fat of a male cat, and a red boar’s fat, and three drams of blue wax (cupriated wax), watercress, wormwood, the red strawberry plant, and primrose. Boil them in pure spring water, and when boiled, stuff a gander with them, and roast them at a distance from the fire. The grease issuing from it should be carefully kept in a pot. It is a valuable ointment for all kinds of aches in a man’s body, and is like one that was formerly made by Hippocrates. It is proved.”

“*To Clean the Eye.*—Obtain some fresh sprats, and lay them in the sun or at such a distance from the fire as will subject them to a like heat, till an oil exudes therefrom. Mix this oil with honey, and anoint your eye therewith.”

“*To Procure Sleep.*—Boil poppy heads in ale, and let the patient drink it, and he will sleep.”

The preparation of cod liver oil was practised at this early period by the Welsh

### THE ANTIENT WILD GOAT OF WALES.

“Not for Cadwalladr and all his goats.”—  
*Shakespeare (Henry V.)*

The mountains of Wales were once the stronghold of an exceptionally fine race of wild goats, which formed a valuable source of milk and meat supply (*côch yr wden*=hung goat-venison) to the antient Cymry. Pennant, the Welsh zoologist, mentions one with horns 3 ft. 2 inches long, and measuring 3 ft. from tip to tip. Some fine specimens of the wild goat are still found in Glamorganshire.

physicians, as may be judged from the following recipe :—

“ *To Make a Cerecloth.*—Take two ounces of cod oil, two ounces of pitch, two and a quarter ounces of mastic, and one ounce of frankincense. Mix them well together and set on the fire, taking a quantity of plantain juice and mixing therewith. Put the cloth in this molten fluid, so that it may absorb as much as possible thereof. Then set aside to cool, warming it by the fire when required, for a bruise or other injury on a man’s body.”

Towards the close of the manuscript, a list is given of the “essentials of a physician :

“ 1. A lancet to bleed or open an abscess ; also a knife somewhat larger.”

“ 2. A steel or silver spatula to spread a plaster.”

“ 3. A pipe and a bladder to inject to the urinary organs or rectum.”

“ 4. His plasters, his ointments, his pills, his powders, his potions, carefully preserved to meet any demand and occasion.”

“ 5. A garden of trees and herbs, where such herbs, shrubs, and trees as do not everywhere grow naturally, may be kept cultivated, and where foreign trees and plants which require shelter and culture before they will thrive in Wales, may be grown.”

Some excellent advice is given to the young physician. He is exhorted to be a kind man, gentle, mild, meek, intelligent, wise and gentlemanly in act and deed, in word and conduct, being careful not to

## THE LEEK OF WALES.

(A MEMENTO OF ST. DAVID'S DAY.)

An old rhyme says of St. David:—

“He did only drink what crystal waters  
yield,

And feed upon the leeks he gathered in the  
field;

In memory of which, in the revolving year,

The Welshman on that day the sacred herb  
doth wear.”

Tradition tells us that upon St. David's Eve, A.D. 640, a king of South Wales discovered that a Saxon army was about to attack him, the soldiers disguised as Welshmen. He enjoined his followers each to pluck a leek from an adjoining field, and wear it as a distinguishing mark, and the king obtained a signal victory upon the morrow. Shakespeare makes Fluellin explain to Harry of Monmouth the custom of wearing the leek by a Welshman on St. David's Day, “which, your Majestie knows, to this day is an honourable badge of service.”

shame those whom he has to examine, particularly when he has to examine women.

“He should always have his case of instruments, emetics, and antidotes about him in case of need. He should be constitutionally and habitually devotional, so that the blessing of God may be upon him and what he does, and that he may be conscientious to do what is right and beneficial in the practice of his art.”

A careful study of this interesting manuscript shows that the art of medicine practised in Wales in the 15th century was farther advanced, and was freer from the influence of superstition, than in most European countries at that period.

Medicaments were evidently prepared with care and attention and their properties tested, some crude attempts being made to analyse the symptoms of disease before commencing treatment.

Before entering upon the practice of his profession, the young medical man was expected to submit to a careful preliminary training and final examination, “so that he (as physician) may be skilled in the judgment and science of the wise and skilful physicians who have preceded him.” The advice and axioms laid down for the guidance of the practitioner prove that the ideals of these early Cymric fathers of medicine were lofty, and their knowledge in advance of the times in which they lived.

DRUIDICAL WORSHIP.

Druidic breast-plates.

## DRUIDIC BELIEFS.

MEDICINE, astronomy, and religion were intimately associated by the Druids. They believed that the soul was eternal, and that the stars were worlds successively inhabited by spiritual emigrants from the earth. To the appearance of the moon they gave special study, and believed that it was a

Representations of Sun, Stars, and the Constellation of the Watering Pot, on an ancient Gaulish coin.

body like the earth with mountains and other similar features, and that it was the residence of happy souls. The moon to them was the place and visible pledge of immortality. For this reason it occupied a high position in their religion, the order of all their festivals being

arranged to follow the day which was dedicated to it; its presence was sought in all their ceremonies, and its rays were invoked. Thus, owing to their reverence for the lunar body, the Druids are generally represented with the crescent in their hands. To the moon they appealed in times of difficulty and trouble. Thus Tacitus speaks of the Romans having been

strenuously opposed in Wales by armed Britons, headed by Druids, who, "lifting up their hands to the heavens from the high mountain peaks, invoked their gods, and poured curses on the invaders, striking terror for a while into the hearts of the Roman soldiers."

"So strong was their conviction of the future life in the planets," states Pomponius Mela, "that it was customary among the Druids to lend money to be repaid in the next world."

Representations of Sun, Moon and Stars on an ancient Gaulish coin

The Druids supposed that when the circle of the moon was complete, fortune promised to be most propitious. The word *rath*, which in Gaelic means a wheel or circle, also signifies fortune. The Druids believed

Representations of a Constellation and Time on an ancient Gaulish coin.

in the influence of the moon on man as well as on inanimate objects. The waxing, the full, or the waning moon was emblematical of prosperity, established success, or declining fortune, and by the phases of the moon the periods for commencing important undertakings were regulated.

The stars and other heavenly bodies were also revered, though in a lesser degree. The Milky Way was thought to be the town of Gwyon, the genius

of which, called Dow, was believed to reside in the constellation of Cassiopeia. Another mythical being, called Arthur, had for his dwelling the Great Bear, which the Druids called "Arthur's Chariot."

Further evidence concerning the astronomy of the Druids is furnished by numerous coins that have been discovered belonging to the old Gauls, who were of the same stock as those who cultivated Druidism in Britain.

On some of these coins and medals are to be found astronomical symbols, such as the sun, moon, the sun-horse, the bear, and various constellations. Several of these signs appear to have been borrowed from the Chaldeans and Egyptians, and probably were communicated to the Druids by the Phœnicians. The concentric pointed circles, the crescent with a globule or a star, and the line in zigzag were used in Egypt to symbolise the sun, the month, the year, and water, and they appear to have had the same significance among the Druids.

Representations of  
Sun and Great Bear  
on an antient Gaulish  
coin

Again, other signs, such as that here illustrated, and its multiple combinations, the centred circles, the globules or rings, the alphabetical characters recalling the form of a constellation, and the wheel with rays, are all represented on

bronze arms found in Celtic, Germanic, and Scandinavian lands.

The curious custom of impressing their astronomical ideas upon their coinage is not peculiar to the Western nations alone, for in China, Korea and Japan, coins of a similar description have been met with, on which are impressed the signs of the Zodiac.

In the ceremonies of the Druids, invocations were addressed to the sun, moon,

Druidic Symbols of the Sun, Moon, etc.

stars, and other visible phenomena, but above Nature there was believed to be the great generating and moving principle which the Celts placed, at a later period perhaps, among the attributes of their supreme deities.

“Their knowledge of astronomy was such,” says Toland, “that in one of their temples in the Island of Lewis every stone is placed astronomically correct.”

A kind of glass or vitreous substance, that has been found in the cairns, shows that the manufacture of glass was not unknown to

the Druids, which knowledge they probably acquired from the Phœnicians.

Among the deities venerated by the Druids were Mercury, who was regarded as the inventor of the arts, Apollo, Mars and Jupiter.

The cube was used by them as the symbol of Mercury, and also to signify truth, while the tallest and fairest oak-tree in the wood was consecrated to Jupiter.

With the general consent of the whole order, the Arch-Druid fixed on the most beautiful oak-tree in the grove, and then performed the rite of consecration. All the side branches having been first cut off, he proceeded to join two of them to the highest part of the trunk, so that they extended on either side like the arms of a man, and formed in the whole the shape of a cross. Above the insertion of these branches, and below, they inscribed in the bark of the tree the word "Thau," and before it performed their most sacred rites.

Of all trees the oak appears to have been held in the highest veneration by the Aryan race. It ranked among the holy trees of the Germans, and was, indeed, their chief deity, distinct traces of its worship having survived almost to the present day. To the ancient inhabitants of Italy the oak was sacred above all other trees. The image of Jupiter Capitolinus at Rome, according to Livy, was nothing but a natural oak tree. The civic crown of the Romans was of oak, and a chaplet of oak was the reward of eminent services rendered to the State.

The Greeks worshipped Zeus as residing

in the sacred oak at Dodona, and the rustling of its leaves was supposed to be his voice. According to the belief of the ancient Greeks, acorns formed the staple food of man till Demeter introduced corn. Boughs of oak were therefore carried in her mysteries at Eleusis.

The Druids were adepts in magic, and especially in divining. The most solemn rite of divining was performed by examining accurately the entrails of sacrificed victims, and so judging by their appearance if the gods were favourable or not. They also divined from the fall and convulsion of the limbs, and from the flow of blood immediately after the victim had received the fatal blow.

They predicted future events by gazing into holy wells and running streams, after these had been stirred by the branch of an oak-tree, or by a magic wand.

The first of November was regarded by the Druids as the night of mystery. On this occasion they annually celebrated the reconstruction of the world. A terrible rite was connected with this celebration, for the Druidic nuns were compelled at this time to pull down and rebuild each year the roof of their temple, as a symbol of the destruction and renovation of the world. If one of them in bringing the materials for the new roof allowed her sacred burden to fall, she was lost. Her companions, seized with fanatic transport, rushed upon her, and tore her to pieces, and scarcely a year is said to have passed without there being one or more victims. On the same night the Druids extinguished the sacred fire, which was kept continually burning in the

holy precincts, and at that signal all other fires were one by one put out, and the thick darkness of primitive night reigned throughout the land. Then passed along to the West the phantoms of those who had succumbed during the preceding year, and were carried away in boats to the judgment-seat of the God of the Dead.

The Dragon of Wales

*“ Cambria, I love thy genius bold,  
Thy dreadful rites and Druids old,  
Thy Bards who struck the sounding strings  
And waked the warlike souls of kings.  
I love thy fair Silurian vales  
Fanned by Sabrina’s temper’d gales,  
That lured the Roman to engage  
The scythed cars of Arverage.”*  
*Ode to Cambria*

### DRUIDS UNSHEATHING THE SWORD

Druids performing an ancient ceremony. The great sword of the Gorsedd was unsheathed on the declaration of war and was not returned to its scabbard until peace was proclaimed.

THE . . . . .  
CHRONOLOGY . . .  
OF THE . . . . .  
CYMRY . . . . .

It is stated that the original home of the Cwmry, Cumri, or Cymry, was in Southern Hindustan, the southern extremity of which, Cape Comorin, takes its name from the same root. The meaning of the Sanscrit word "Kumari" is a youth, a prince.

The following, also, is an interesting example of the agreement of Cymraeg with the Hebrew language:—Hebrew: "Byllang adonai-eth cal nêoth Jangeob." Cymraeg: "By-llw-ng adon-ydh holl neuodh Jago." English: "The Lord hath swallowed up all the habitations of Jacob."—Lam. ii. 2.

The severe "Ordinances of Wales" entail renewed revolt. Owain Glyndyfrdwy (Owen Glendower, or Owen of the Glen of the Dee) is crowned Prince of Wales at Machynlleth, but is subsequently crushingly defeated ... .. A.D. 1400—1415

Henry VII. (Tudor), a descendant of the Great Cadwalladr, wins the English crown, finally unites the English and the Welsh, and verifies the prophecy that had cheered the Cymry for close upon a thousand years:—

A.D. 1485

“ But, after long pain, Repose we shall gain  
When sway barbaric has purged us clean;  
And Britons shall regain, Their crown and  
their domain,  
And the foreign oppressor be no more seen.”

Henry VIII. by statute abolishes “ The Welsh Marches,” and places Denbigh, Montgomery, Radnor, Monmouth, Brecknock, Glamorgan and Pembroke under county government. Wales was then united and incorporated with England by Act of Parliament ... ..

1536

First Bible published in Welsh language ... ..

1588

George, the present Prince of Wales, was commanded by King Edward VII. to add the Red Dragon of Wales to his “ Achievement,” and thus “ The Dragon of the Great Pendragonship ” once more graces the escutcheon of the titular head of the Cymric race ... ..

8th Nov., 1901

St. David (Dewi Sant), the patron Saint of Wales, is believed to have been of royal descent, and is said to have crowned King Arthur. His election to the archbishopric of Wales, some years before the arrival of St. Augustine, marked important progress in the missionary march of Christianity amongst the Cymry.

## *What is Substitution?*

The "*Pharmaceutical Journal*" says:  
"All self-respecting chemists will agree that substituting tradesmen are unfair dealers."

The "*Chemist and Druggist*" says:  
"Substitution, in essence and in fact, is palming off one article for another; thus in dispensing, by giving an imitation, official or unofficial, for a proprietary or specific article prescribed by the physician. In retailing, similar action takes place."

*Mr. Reid* says: "There can be no uglier word in pharmacy than the word 'substitution.' No chemist with whom I have ever come in contact would have been guilty of 'substitution' in any shape or form. The only meaning which can be attached to the word 'substitution' is that the chemist surreptitiously supplies an article other than what is asked for. I contend that this is never done in legitimate pharmacy."

## *Is Substitution Justifiable?*

BURROUGHS WELLCOME & Co.

That patients willingly  
take 'Kepler' Solution  
is one point.

That it enables the most  
delicate of them to  
assimilate cod liver oil  
easily is the great point.

It is here that imitations fail.

*To prevent Substitution.*

Written prescriptions are  
safer than verbal orders.

Barron's Wellcome & Co.

THE MEDICINE CHEST  
OF  
QUEEN MENTU-HOTEP,  
WHO LIVED B.C. 2,200.

The massive wooden outer-case bears the royal cartouche. The chest is of plaited papyrus reeds, and is divided into six compartments containing beautifully shaped medicine jars of oriental alabaster. The chest contains various medicinal roots, and a wooden spoon ornamented with the head of Hathor. It was discovered at Thebes. This unique medical equipment demonstrates the huge bulk, with paucity of supplies, characteristic of pre-'Tabloid' days. A 'Tabloid' brand pocket-case contains a scientific therapeutic equipment, the equivalent of which, in the drugs of ancient Egypt, could be transported only by a regiment of slaves.

### MILITARY MEDICINE CHEST—1588

Fabricius, a noted Swiss Physician of the XVI century, recommended that the military chest should be furnished with no less than 362 varieties of medicine, some of which contained as many as 64 ingredients. The complexity of arrangement, the huge bulk and great weight, the liability to breakage, and the complicated inconvenience of medicine chests persisted until the introduction of 'Tabloid' Medical Equipments.

## MEDICAL EQUIPMENTS IN EXPLORATION AND IN WAR.

As souvenirs of great explorers, or mementos of arduous military campaigns, the actual medical equipments carried can hardly be equalled for interest. The chests and cases used by explorers possess a unique interest of the most intimate and personal kind; whilst those which have formed the medical equipments of military expeditions, and have been the armamentaria employed to combat sickness and death in the field, naturally appeal strongly to physicians.

No. 250.—TABLOID BRAND MEDICINE CHEST.

Fitted with 'Tabloid' and 'Soloid' brand products, therefore combining high accuracy, convenience, permanence, and activity of medicines with unique portability. Owing to its great compactness, this chest has been used in the medical equipment of all recent military expeditions and all important exploring expeditions.

The conditions under which these equipments have necessarily been employed, combining rough usage and exposure (in some cases for years) to every variety of climate, form the severest tests to which it is possible for medicines and medicine cases to be subjected.

The records of the methods of transporting medicines in ancient times are especially interesting. The Egyptians, who cultivated the art of pharmacy, employed medicine chests and large goat-skin pouches for storing and carrying drugs, some 3,000 years or more B.C. Judging from the writings of the early historians, the Greek and Roman physicians, who accompanied the military expeditions, carried with them a supply of what Homer calls "herbs of healing power" and other medicaments. It was customary for even the most distinguished physicians in ancient Rome to collect their own drugs. The medicines bore distinctive and explanatory labels, and were often enclosed in boxes which were elaborately decorated.

In the middle ages, owing to the great variety and bulky nature of the remedial agents used, the medicine chests employed in military campaigns assumed enormous proportions, as shown by the illustration on page 56. This chest was probably used by William Clowes, a celebrated army surgeon of the sixteenth century. Fabricius, a noted Swiss physician of this period, recommended that the military chest should be furnished with no less than 362 varieties of medicine, some of which contained as many as 64 ingredients.

Early in the seventeenth century, it appears to have been customary with the private soldier to carry some medicines with him when proceeding on a campaign. Mindererus advised each soldier to furnish himself with a supply of mithridate for use against infection, also zedoary, angelica, masterwort, carlina and other herbs. He is also enjoined to carry a stock of buck's grease for use should he be galled when riding, and senna wherewith to purge himself when necessary, but how he was to transport these various remedies the old physician deponeth not.

Until the introduction of 'Tabloid' products, little improvement had taken place in reducing the bulk of medicinal agents for storage or transport. At the time of the Crimean War, owing to the large doses of liquid medicine employed, medicine chests had either to be of enormous and unwieldy size, or, if small, they could contain supplies for only a few men. The embarrassing bulk of the medicines, which was altogether incompatible with reasonable means of transport, made a great

impression on the practical mind of Miss Florence Nightingale, whose great work in the Crimean hospitals will never be forgotten. Reporting in the year 1858 on "Matters affecting the health, efficiency, and hospital administration of the British Army," she suggested that "a military pharmacopœia should be fixed upon by the most distinguished men of the medical profession. Let them decide what medicines and appliances are really essential to the health of an army, and *compatible with reasonable means of transport.* Whereas now it is true that *unreasonable bulk is required in the supplies of medicines demanded.*"

This recommendation has been made practicable in recent times by the introduction of 'Tabloid' and 'Soloid' brand products, which by their extreme portability, their reliability, and their

Length of 30 min. tube of same diameter as 'Tabloid' product.	Size of 'Tabloid' product containing active principles of 30 minims of tincture.
---	--

freedom from deterioration in all climates, have brought drugs of the utmost value within the reach of the army surgeon on the battlefield. This fact will be readily apparent when we compare the medical and surgical equipment now used with that employed even less than fifty years ago.

Early explorers, particularly in Africa, found the difficulties of securing adequate portable medical supplies practically insuperable, and the horrors of disease and death associated with their expeditions were almost beyond description. "When I think," said Sir H. M. Stanley, in the course of one of his lectures, "of the dreadful mortality of Capt. Tuckey's expedition in 1816, of the Niger Expedition in 1841, of the sufferings of Burton and Speke, and of my own first two expeditions, I am amazed to find that much of the mortality and sickness was due to the crude way in which medicines were supplied to travellers. The very recollection causes me to shudder."

One of the 'TABLOID' BRAND MEDICINE CHESTS carried by SIR H. M. STANLEY throughout the EMIN RELIEF EXPEDITION, and brought back as a souvenir, the remaining contents unimpaired.

That a very marked change has taken place can be gathered from a more recent speech of this eminent explorer, in which he said: "In my early expeditions into Africa, there was one secret wish which endured with me always, and that was to ameliorate the miseries of African explorers. How it was to be done, I knew not; who was to do it, I did not know. But on preparing for my third expedition into Africa, I made the acquaintance of Messrs. Burroughs Wellcome and Co. As soon as I came in sight of their preparations and their works, I found the consummation of my secret

wish. On my third expedition I had all the medicines that were required for my black men, as well as my white men, beautifully prepared, and in most elegant fashion arranged in the smallest medicine chest it was ever my lot to carry into Africa."

In his well-known book, "In Darkest Africa," Sir H. M. Stanley writes in the very highest terms of 'Tabloid' Medical Equipments.

Amongst other cases used during Stanley's travels is the famous "Rear Guard" 'Tabloid' Medicine Chest, which remained in the swamp regions of the Congo for nearly four years, and more than once was actually submerged in the river. When it was brought back to London, the remaining contents were tested by the official analyst of the "Lancet," who reported that the 'Tabloid' Medicaments had perfectly preserved their efficacy.

EMIN PASHA'S 'TABLOID' BRAND MEDICINE CHEST.

The late Surgeon-Major Parke, Stanley's Medical Officer, in his "Guide to Health in Africa," writes :

"The medicinal preparations which I have throughout recommended are those of Burroughs Wellcome & Co., as I have found, after a very varied experience of the different forms in which drugs are prepared for foreign use, that there are none which can compare with them ('Tabloid' Products) for convenience of portability in transit, and for unfailing reliability in strength of doses even after prolonged exposure."

At this point it is of interest to turn to a 'Tabloid' Medicine Chest, illustrated above, which was discovered near Kenia, in the Aruwhimi Dwarf Country. It was the last case supplied to

Emin Pasha, Gordon's Governor of the Equatorial Sudan. It was taken by Arabs after he was massacred in 1892, and was recaptured by Baron Dhanis, commandant of the Congo Free State troops, after the battle of Kasongo. This chest was subsequently stolen by natives, and finally recovered by an officer of the Congo Free State, and returned to Burroughs Wellcome and Co.

Another case, associated with Stanley, is the Raw Hide 'Tabloid' Medicine Case (illustrated below) used by Thomas Stevens, the author of "Around the World on a Bicycle," and described in his book, "Scouting for Stanley in East Africa." A history of all the 'Tabloid' Equipments associated with African exploration would,

THOS. STEVENS' 'TABLOID' BRAND MEDICINE CASE.

of itself, make a complete volume, and it is only possible to make brief mention of a few other instances of their use.

The Muxworthy 'Congo' 'Tabloid' Medicine Chest made the journey from Zanzibar to the Victoria Nyanza and back twice, in the days when the present facilities for travel on that track did not exist, and it has formed the sole medical equipment of a government caravan of 300 men from Zanzibar to Uganda.

The Rendall 'Tabloid' Medicine Case, formerly the property of Dr. Percy Rendall, Principal Medical Officer of the British Central African Administration, was presented to Burroughs Wellcome and Co. in 1894, after being in constant

use for six years in Western Africa, Japan, China, Canary Islands, India, West Indies, and the Transvaal.

Captain Stairs, throughout his long journey to Katanga, carried a medicine belt specially designed for him by Mr. Wellcome. It was brought back by Dr. Maloney, with its remaining contents unimpaired.

That 'Tabloid' Equipments excel for military purposes has been abundantly demonstrated during various British and foreign military campaigns. The following is an extract from the Official Government Report, made by the Chief

One of the 'TABLOID' BRAND MEDICINE CHESTS used during the Ashanti Campaign, 1895-6.

Medical Officer of the British Military Expedition of 1895-6, to Ashanti, on the 'Tabloid' Medical Equipment supplied by Burroughs Wellcome & Co. :—

“The supply of medicines, both as to quality and quantity, left nothing to be desired. There was no scarcity of anything. The 'Tabloid' medicines were found to be most convenient and of excellent quality. To be able to take out at once the required dose of any medicine, without having to weigh or measure it, is a convenience that cannot be expressed in words. Time is saved to an extent that can hardly be realised, and so is space, for a fitted dispensary, or even a dispensary table, is unnecessary. The quality

of medicines was so good that no other should be taken into the field. The 'Congo' cases supplied are almost ideal ones for the Government. They are light yet strong, and the arrangement of the materials and medicines is as nearly perfect as possible."

During the American War with Spain, in Cuba and the Philippines, 'Tabloid' Medical Equipments were specially ordered for, and used by the U.S. Army and Navy.

One of the 'TABLOID' BRAND MEDICINE CHESTS used in the Greek Hospitals during the Greco-Turkish War.

One of the 'Tabloid' Medicine Chests employed in the Greek hospitals during the Greco-Turkish campaign is here illustrated.

An equipment of still more recent interest is illustrated on page 65. It was formerly the property of the late G. W. Steevens, and was used by him throughout the war in Greece, the two Sudan campaigns, and his journey to India. In the South African War the same chest did good service until this brilliant writer's life was brought to a premature end during the siege of Ladysmith.

Illustrations of some of the 'Tabloid' Medical Equipments, specially designed for, and supplied to the City of London Imperial Volunteers and

the Imperial Yeomanry will be found on page 66. Similar cases were designed for, and supplied to the Colonial Contingents.

THE LATE G. W. STEEVENS' 'TABLOID' BRAND MEDICINE CASE.

One of the 'TABLOID' BRAND MEDICINE CASES specially designed for and supplied to the troops from the various British Colonies, for use in the South African Campaign.

One of the 'TABLOID' BRAND MEDICINE CASES specially designed for and supplied to the City of London Imperial Volunteers, for use in the South African Campaign.

One of the 'TABLOID' BRAND MEDICINE CASES specially designed for and supplied to the Imperial Yeomanry, for use in the South African Campaign.

The equipment of the American Hospital Ship "Maine" (now presented to the British Government), and the valuable services it has rendered in connection with the campaigns in South Africa and in China, are so recent as to be within the

One of the 'TABLOID' BRAND MEDICINE CHESTS specially designed for and supplied to the Hospital Ship "MAINE."

memory of all. The whole of the medical outfit was supplied by Burroughs Wellcome & Co. It included a ward chest (illustrated above), which was thus described by *The Lancet* :—

"One of the medicine chests supplied by this firm is in tooled leather, designed by Mr. Henry S. Wellcome. On the top panel appear the Union Jack and Stars and Stripes entwined, portraits of George Washington, Queen Victoria, and President McKinley, and representations of the American Eagle and British Lion. The front and other panels bear symbolic designs indicating the bond of union between the English and American peoples. Prominently inscribed on the chest are Keble's line, 'No distance breaks the tie of blood,' and Ambassador Bayard's notable phrase, 'Our kin across the sea.'"

In the still unaccomplished endeavours to reach the poles, and in the exploration of Arctic and Antarctic lands, 'Tabloid' Medicine Cases have taken, and are taking, a pioneer position.

The belts and other 'Tabloid' Medical Equipments supplied to Nansen for his journey in the "Fram," and those used by the Jackson-Harmsworth Arctic Expedition, are now added to Burroughs Wellcome & Co.'s historic collection.

**No 250 'TABLOID' BRAND MEDICINE CHEST**

One of the 'TABLOID' BRAND CHESTS used by the JACKSON HARMSWORTH Polar Expedition.

In his report, the Surgeon to the latter expedition says, "I find that the 'Tabloid' drugs are most convenient, especially in circumstances such as we are placed in." One of the cases used by the expedition is shown above.

Lieutenant R. E. Peary's last completed Arctic Expedition, as well as that of Mr. Walter Wellman, was equipped with 'Tabloid' Medical outfits. Lieutenant Peary, writing from Etah, Greenland, reports:—

“Burroughs Wellcome & Co. ‘Tabloid’ Field Medicine Cases and supplies have proven invaluable.”

One of the ‘TABLOID’ BRAND MEDICINE CHESTS used by LIEUT. R. E. PEARY in his recent Arctic Expedition.

Mr. Walter Wellman makes the following report on his equipment:—

“During our arduous sledge journey the small aluminium case containing your ‘Tabloid’ Drugs, bandages, hypodermic outfit, etc., was all we carried in this line, and though weighing but a few pounds, it was never found wanting in anything whatsoever to meet our requirements. It would be difficult to imagine a more complete, perfect, and convenient outfit in small compass and weight than that supplied by you.”

Still more recently the Italian Arctic Expedition, commanded by the Duke of the Abruzzi, has returned. It has been found that in spite of

the fact that the record northern latitude of  $86^{\circ} 33' 49''$  was reached, the 'Tabloid' Medicine

One of the 'TABLOID' BRAND MEDICINE CASES carried by the DUKE OF THE ABRUZZI'S Polar Expedition.

Chests and Cases with which the expedition was equipped have been brought back with their remaining contents quite unaffected by the rigour of the climate.

One of the 'TABLOID' BRAND MEDICINE CHEST carried by the DUKE OF THE ABRUZZI'S Polar Expedition.

Mr. Julius Price, the special artist and correspondent of the "Illustrated London News," reports that he carried his 'Tabloid' Medicine Chest over 30,000 miles through frigid Arctic regions, across Siberia, through China and Japan.

and across America. In spite of the severe wear and tear of this great journey, the case has

JULIUS PRICKE'S 'TABLOID' BRAND MEDICINE CASE

suffered little, and the remaining contents are quite unaffected by exposure to every variety of climate.

Two typical reports on 'Tabloid' Equipments are appended:—

Extract from the report of B. F. Rand, M.D., F.R.C.S., Principal Medical Officer, British South Africa Company:—

“We have had Burroughs Wellcome & Co.'s 'Congo' Chests, fitted with 'Tabloid' medicines, in daily use during the occupation of this country. They have proved of inestimable service.”

Extract from the report of the late W. H. Crosse, M.R.C.S., L.F.P.S., Principal Medical Officer, British Royal Niger Company:—

“All these 'Tabloid' drugs are so good it is impossible for me to speak more highly of one than another. They are all of the very best quality, each drug is accurately described, and reliable. To the traveller these preparations are simply invaluable, and I would strongly advise everyone coming out to the Tropics to get a full supply of 'Tabloid' medicines.”

MEDICAL EQUIPMENTS FOR HOME USE.

In a small space, 'Tabloid' Medicine Cases contain complete outfits of fine drugs in doses of high accuracy. They can be carried in the pocket, in the carriage or motor car and on the cycle, their contents being always ready for use in urgent cases. They are specially valuable to the country practitioner, who is often called upon to cover long distances, and who would experience great difficulty in carrying or obtaining supplies of such medicines as he may desire to administer promptly, were it not for the convenience, compactness, and portability of 'Tabloid' Medicine Cases.

Illustrations and particulars of a few 'Tabloid' Cases are here given. The prices quoted are approximate, and are regulated by the outfit selected. In those cases which contain the Patent Nickel-plated Hypodermic Syringe, this instrument may be replaced by the B. W. & Co. All-Glass Aseptic Hypodermic Syringe at an increased cost of 2s. Full lists and details of many others will be sent on request.

No. 7.—HYPODERMIC 'TABLOID' BRAND  
POCKET CASE.

Measurements  $3\frac{3}{4} \times 2\frac{3}{4} \times 1\frac{1}{2}$  in.

SYNOPSIS AND FORMULARY

OF

FINE PRODUCTS

OF

Burroughs Wellcome & Co.

**Beef and Iron Wine**

(B. W. & Co.)—

DOSE.

Each tablespoonful contains the restorative and nutritious principles of about 1 oz. of choice lean Beef with gr. 4 of a readily assimilable salt of iron.

One tea-  
spoonful for  
children, to  
one table-  
spoonful for  
adults.

**Beef and Iron Wine with Quinine (B. W. & Co.)—**

Each tablespoonful contains the restorative and nutritious principles of about 1 oz. of choice lean Beef, together with gr. 4 of a readily assimilable salt of iron and gr.  $\frac{1}{4}$  of Quinine.

One tea-  
spoonful for  
children, to  
one table-  
spoonful for  
adults.

**Chemicals, 'Wellcome' Brand** (*see pages 123-131*).

**CHESTS AND CASES (B. W. & CO.)**

(*See also pages 72-76*).

**Analysis Cases, 'Soloid' Brand.**

No. 500. 'Soloid' Brand Water Analysis Case. Complete with 'Soloid' Brand Chemicals, Apparatus, &c.

No. 510. 'Soloid' Brand Urine Test Case (design registered), complete with 'Soloid' Brand Chemicals, Urinometer, Esbach's Albuminometer, Test Tubes, Spirit Lamp, &c.

*For full particulars of these and numerous other examples, see Large Price List.*

**CHESTS AND CASES (B. W. & Co.) *cont'd.***

*(See also pages 72-76).*

**Antiseptic Cases, 'Soloid' Brand.**

Fitted with from four to eighteen containers of 'Soloid' Brand Products, etc.

**Hypodermic Pocket Cases, 'Tabloid' Brand,** are prepared in Gold, Silver, Gun-metal, or Aluminium, and in a great variety of fancy leathers. Each contains a B. W. & Co. Patent Syringe, Needles, and from three to fifteen tubes of 'Tabloid' Brand Hypodermic Products, etc.

**No. 21. Hypodermic 'Tabloid' Brand Pocket Case.**

Contains B. W. & Co. Patent Nickel-plated Hypodermic Syringe, nine tubes of 'Tabloid' Hypodermic Products, two Needles, Capsule of Ether, etc.

**No. 30. Hypodermic 'Tabloid' Brand Pocket Case.**

Contains B. W. & Co. Patent Nickel-plated Hypodermic Syringe, 15 tubes of 'Tabloid' Hypodermic Products, and two Needles.

**No. 80. Hypodermic and Ophthalmic 'Tabloid' Brand Case** (The 'British Army Regulation') in aluminium, contains 16 tubes of 'Tabloid' Hypodermic Products, 11 tubes of 'Tabloid' Ophthalmic Products, booklet giving a summary of the chief uses of the products, etc., etc.

**No. 34. Hypodermic and Ophthalmic 'Tabloid' Brand Combination Pocket Case.** (Design Registered.)

Nickel plated. Contains B. W. & Co. Patent Nickel-plated Hypodermic Syringe, two regular steel Needles, one Exploring Needle, one Lachrymal Needle, nine tubes of 'Tabloid' Hypodermic Products, nine tubes of 'Tabloid' Ophthalmic Products, four tubes of 'Soloid' Antiseptic Products, etc., etc.

**NOTE.**—If desired, the B. W. & Co. All-Glass Aseptic Hypodermic Syringe may be fitted in place of the nickel-plated syringe, at a slightly increased price.

*For full particulars of these and numerous other examples, see Large Price List.*

**CHESTS AND CASES (B. W. & Co.) *cont'd***

*(See also pages 72-76).*

**Medicine Chests and Cases, 'Tabloid' Brand.**

These medical equipments are made in a great variety of designs to suit the special requirements of medical men, travellers, missionaries, etc. They provide, in a handy compact condition, those medicines most frequently required for emergencies, journeys, etc. Highly finished cases are also supplied in Seal, Crocodile, Crushed Morocco, etc.

The following are amongst those in most frequent demand :—

No. 111. 'Tabloid' Brand Medicine Pocket Case (*The Cyclist's*), five bottles of 'Tabloid' Brand Products.

No. 123. 'Tabloid' Brand Medicine Pocket Case, containing from 10 to 16 tubes of 'Tabloid' Brand Products.

No. 125. 'Tabloid' Brand Medicine Pocket Case (*for Emergencies*), 14 tubes of 'Tabloid' Brand Products, 12 tubes of 'Tabloid' Hypodermic Products, B. W. & Co. patent nickel-plated Syringe and two Needles.

No. 202. Physician's Cycle Stay-Bar 'Tabloid' Brand Medicine Case, 12 phials of 'Tabloid' Brand Products, minor Surgical Instruments and Dressings.

No. 204. 'Tabloid' Brand Medicine Case (*Yacht's Life-Buoy*), 15 bottles of 'Tabloid' and 'Soloid' Brand Products, minor Surgical Instruments and Dressings.

No. 229. 'Tabloid' Brand Medicine Case, 40 phials of 'Tabloid' and 'Soloid' Products.

No. 250. 'Tabloid' Brand Medicine Chest. (As supplied to Sir H. M. Stanley, The Jackson-Harmsworth Polar Expedition, Missionaries and others).

No. 254. 'Tabloid' Brand Medicine Chest (*The Indian*). Made of japanned metal. Contains from 22 to 24 bottles of 'Tabloid' and 'Soloid' Products, instruments, dressings, etc.

*For full particulars of these and numerous other examples, see Large Price List.*

## Trade Mark 'ENULE' RECTAL SUPPOSITORIES

The word 'ENULE' is a brand which designates fine products issued by Burroughs Wellcome & Co. To ensure the supply of these pure and reliable preparations this brand should always be specified when ordering.

'Enule' BRAND—		DIRECTION.
„ Belladonna Ex-tract	gr. 1/4, gr. 1/2, and gr. 1	One as required.
„ Bismuth Subgallate	gr. 10	One as required.
„ Cocaine Hydrochloride	gr. 1/2	One as required.
„ Glycerin (Anhydrous)	95%. Adults' size and Children's size.	One as required.
„ 'Hazeline' Compound	Containing 'Hazeline,' Hamamelidin and Zinc Oxide.	One as required.
„ Lead and Opium ℞ <i>Plumbi Acetatis</i> ... <i>Pulv. Opii</i> ...	... gr. 3 ... gr. 1	One as required.
„ Meat (Pre-digested) <i>Containing respectively gr. 15 and gr. 8½ of concentrated peptone from choice fresh beef.</i>	Adults' size and Children's size.	One as required.
„ Milk (Pre-digested) <i>Containing gr. 18 and gr. 10 of concentrated peptone from new milk.</i>	Adults' size and Children's size.	One as required.
„ Morphine and Belladonna ℞ <i>Morphinæ Hydrochlor.</i> gr. ¼ <i>Ext. Belladonnæ</i> ... gr. ¼		One as required.
„ Morphine Hydrochloride	gr. 1/4, gr. 1/2, and gr. 1	One as required.
„ Opium Extract	gr. 1	One as required.
„ Quinine Bisulphate	gr. 5	One as required.
„ Santonin	gr 3	One as required.

NOTE.—'Enule' Brand Rectal Suppositories must be stored in a cool and dry place.

**'FAIRCHILD' DIGESTIVE PREPARATIONS—**  
(Trade Mark)

	DOSE.
Diazyme, an efficient diastatic essence.	1 to 2 teaspoonfuls.
'Enzymol,' a surgical solvent (Trade Mark) and antiseptic.	
Glycerinum Pepticum, 12 min. will convert 2,000 grs. of egg albumin into peptone	min. 10 to min. 60.
'Panopepton,' a food and food (Trade Mark) stimulant.	A wineglassful as required.
'Pepsencia,' a solution of the (Trade Mark) essential organic ingredients of the gastric juice.	1 teaspoonful as required.
Pepsin (Fairchild), Powder or Scales, will digest 3,000 times its weight of egg albumin.	gr. 5 to gr. 10.
'Peptogenic Milk Powder,' for (Trade Mark) preparing 'humanised' milk.	As required.
'Zymine' (Ext. Pancreatis), the (Trade Mark) pure digestive ferment of the pancreas.	gr. 2 to gr. 5.
'Zymine' Peptonising Tubes, (Trade Mark) for the preparation of pre-digested invalid foods.	As required.

Trade Mark **'Pepule' Brand Products.**

Trade Mark 'HAZELINE' AND PREPARATIONS

		DOSE.
'H a z e l i n e' Brand of dis- tilled Hama- melis Virgini- ana	An anodyne and styptic fluid obtained by distillation from the bark of the green twigs.	dr. 1 to dr. 3
'H a z e l i n e' Cream	Combines the anodyne as- tringent pro- perties of 'Hazeline' with the emol- lient action of 'Dartring' 'Lanoline.'	
'H a z e l i n e' Snow	A non-greasy preparation, owing its as- tringent, soothing, and healing pro- perties to 50 per cent. of 'Hazeline.'	
'Hazeline' Sup- positories	Containing pure 'Hazel- ine.'	One as required.
'Hazeline' Com- pound 'Enule' Suppositories	Containing Hamamelidin, Zinc Oxide, and 'Hazel- ine.'	One as required.

**HYPODERMIC APPARATUS**

SYRINGES.

**All-Glass Aseptic Hypodermic Syringe,  
The B. W. & Co.**

Two sizes, min. 15 or min. 20.

Barrel, piston and nozzle consist entirely of glass; no leather, rubber or other packing employed; parts instantly separable for sterilisation.

**Patent Hypodermic Syringes, <sup>The</sup> B. W. & Co.**

Nickel-Plated. Two sizes, min. 15 or min. 20.

Complete with two regular needles.

Solid Silver. Capacity, min. 20. Complete in case with two platino-iridium needles.

**Hypodermic Apparatus**—*continued.*

**All-Glass Aseptic Serum Syringes, The B. W. & Co.**

Working parts made entirely of glass, the needle being attached to the nozzle by a flexible rubber joint. Four sizes: 3 c.c., 5 c.c., 10 c.c., or 20 c.c., each complete, with two steel needles, in metal case. (If desired, platino-iridium needles can be fitted at increased prices.)

**Nickel-plated Serum Syringes, The B. W. & Co.**

Complete in metal case, with two platino-iridium needles, etc., capacity, 5 c.c., or 10 c.c.

**Needles**, for dental, aural, and urethral uses, also for exploring, for eye irrigation, and for serum syringes (*see page vii at end*).

**HYPODERMIC PRODUCTS, 'TABLOID' Brand.**

*The word 'TABLOID' indicates that this brand of fine products is issued by B. W. & Co.*

"They are quite free from objectionable and irritative salts."—*British Medical Journal.*

"They are very soluble and not at all irritating."—*Lancet.*

**Inhaler—**

Trade Mark 'Vereker' Chloride of Ammonium Inhaler.

Delivers neutral fumes of Ammonium Chloride.

Trade  
Mark 'KEPLER' MALT EXTRACT  
AND COMBINATIONS

PREPARATION AND STRENGTH.

DOSE.

'KEPLER' MALT EXTRACT.

Of all 'Kepler' Preparations, one teaspoonful to one tablespoonful.

A most reliable and highly-concentrated extract, prepared from the finest winter-malted barley. Its medicinal value depends not only on its high diastatic powers, but also on the albuminoids, phosphates, etc., which it contains.

Ditto with Cascara Sagrada.

Each fl. oz. contains Extract of Cascara Sagrada, gr. 5-3/4

Ditto with Chemical Food (Phosphates Compound).

Each fl. oz. contains: Iron Phosphate, gr. 2; Calcium Phosphate, gr. 3; Sodium Phosphate, gr. 1/4; Potassium Phosphate, gr. 1/4.

Ditto with Hæmoglobin.

Ditto with Hypophosphites.

Each fl. oz. contains: Calcium Hypophosphite, gr. 8; Potassium Hypophosphite, gr. 4; Sodium Hypophosphite, gr. 4.

Ditto with Iron and Quinine Citrate.

Each fl. oz. contains Iron and Quinine Citrate, gr. 7-1/2.

Ditto with Iron Iodide.

Each fl. oz. contains Iron Iodide, gr. 2.

Ditto with Iron Pyrophosphate.

Each fl. oz. contains Soluble Iron Pyrophosphate, gr. 4

Ditto with Iron, Quinine, and Strychnine (*Easton*).

Each fl. oz. contains: Iron Phosphate, gr. 1/2; Quinine Phosphate, gr. 3/8; and Strychnine Phosphate, gr. 1/64.

**'Kepler' Malt Extract and Combinations**

*—continued.*

PREPARATION AND STRENGTH.	DOSE.

### Photographic Exposure Record and Diary, Wellcome's.

The most popular pocket book with all photographers. Contains an ingenious calculator, which indicates the correct exposure under any condition with *one movement* only of *one scale*. Ruled pages for recording over 750 exposures; a complete diary for the year and numerous useful articles and tables.

Two Editions: Northern or Southern Hemisphere.  
Bound in Art Green Canvas, with pencil;  
Bound in Fine Red Leather, with wallet and pencil.

N.B.—Wellcome's Photographic Exposure Record and Diary is published annually in November.

Trade Mark 'Salodent,' an aromatic, antiseptic fluid dentifrice.

Trade Mark 'Saxin,' a delightful sweetening agent, about 600 times sweeter than sugar, gr. 1/4.  
*Equivalent to a lump of best Loaf Sugar.*

### Serums—Antitoxic and Other—issued by Burroughs Wellcome & Co.

The increasing therapeutic use of the serum of animals immunised by bacteria and bacterial products is one of the most remarkable characteristics of modern medicine. Statistics from many sources, English and foreign, give a trustworthy indication that Diphtheria Antitoxic Serum has enormously reduced the death rate of diphtheria. The high reputation of the 'Wellcome' Serums, produced in the Wellcome Physiological Research Laboratories, Brockwell Hall, London, S.E., is fully maintained, and the demand has now assumed very large proportions. B. W. & Co., who act as distributing agents, will endeavour to send the serum immediately on receipt of letter or telegram.

The following telegraphic code words have been adopted for the 'Wellcome' Serums: **MURES** for Diphtheria Antitoxic Serum, 2,000 units—if the 1,000 units strength be desired, "Mures, 1,000 units" should be employed: if the high potency serums are required, the telegram

**Serums—continued.**

should read "Mures 1,000 in 1 c.c." or "Mures 2,000 in 2 c.c.," etc., as the case may be. **EPTO** for Anti-streptococcus Serum, Polyvalent. **SUNAT** for Anti-tetanus Serum. **NOMO** for Anti-venom Serum. Thus a telegram reading "'Tabloid, London'—Send six 'Mures'" would be understood to mean:—"Burroughs Wellcome & Co., London: Send six phials of Diphtheria Antitoxic Serum ('Wellcome') containing 2,000 (Ehrlich-Behring) units."

Diphtheria Antitoxic Serum, Liquid ('Wellcome'); in hermetically sealed phials. Phials containing 2,000 (Ehrlich-Behring) units.

" "	1,000	" "	" "	" "
Do., High potency:—				
Phials containing	}	1,000	(Ehrlich-Behring)	} units in 1 c.c.
"	}	2,000	"	} 2 "
"	}	3,000	"	} 3 "

'Pepule' 'Zymine' and 'Pepule' 'Zymine' Com-  
pound, Burroughs Wellcome & Co. are discontinuing  
the issue of 'Tabloid' products of the 'Fairchild'  
Digestive Ferments. For list of 'Pepule' Products  
*see page 83*. In ordering, please specify 'PEPULE'  
instead of 'TABLOID.'

## PHOTOGRAPHIC CHEMICALS.

(For List, see pages 92 to 94.)

'Tabloid' Photographic Chemicals are designed to save time and disappointment, especially when photography is only practised at intervals. They are of special service to the physician or surgeon, since they provide the means of preparing fresh active solutions, as required for use, without the trouble and time involved in weighing up the various ingredients. They save space also, and are much more convenient and sightly to store than solutions.

A 32-page booklet, containing full particulars and directions for development, toning, intensification, reduction, etc., is supplied gratis on request.

Notes on the use of 'Tabloid' Photographic Chemicals in Radiography are given on page 219 of Wellcome's Medical Diary, 1903.

### Wellcome's Photographic Exposure Record.

This pocket book solves the difficulty of estimating correct exposure. It contains tables for speeds of plates, light values, subjects and stops, together with a mechanical calculator which dispenses with the multiplication or division of the different factors, and indicates the right exposure by *one* turn of *one* scale. In addition there are pages of facts, figures and formulæ essential to the busy medical photographer, diary and memoranda pages, and ruled spaces for recording exposures, etc. The book may be had bound in art green canvas, or in fine red leather with wallet.

The Wellcome Chemical Works and Laboratories, Dartford, near London, England.

## 'WELLCOME' Brand Chemicals.

The gratifying reception accorded to 'Wellcome' Brand Chemicals, and the daily increasing demand for them, indicate the interest manifested by prescribers and dispensers in our efforts to supply perfectly reliable fine chemicals. It is common knowledge that considerable variation exists respecting the degree of purity of medicinal chemicals. This of course is a matter of the very first importance with the prescriber, and experience shows that it is also so regarded by the conscientious dispenser. In order still further to extend the opportunity for obtaining chemicals of the highest character, and which ensure uniform therapeutic results, the list of our manufactures has recently received several important additions. These chemicals will be of the same high standard of purity and excellence as those we have already placed on the market.

We hope from time to time to add other fine chemicals and preparations to the list, and also to introduce such new products as shall have been found after thorough physiological or clinical examination to be of positive medicinal value.

In future the recognised doses of 'Wellcome' Brand Chemicals will be indicated on the labels, which will often prove to

be a convenience both to prescriber and dispenser.

Being actual manufacturers, we take this opportunity of stating that while, as a general rule, such salts of the alkaloids, etc., as we offer are those which are best adapted for general use, we shall be pleased to prepare other salts when specially required.

'WELLCOME' Brand—

„ Aconitine.

The pure crystallised alkaloid from *Aconitum Napellus*, free from pseudaconitine and japaconitine, and from the non-toxic aconine and benzaconine. The maximum dose may be considered to be gr. 1/640 (United States Dispensatory.) As aconitine is such a powerful poison, it should be prescribed and dispensed with the utmost caution.

*Tubes of gr. 5.*

„ Aconitine Hydrobromide.

The most suitable salt of aconitine for therapeutic use, being readily soluble in water, perfectly stable, and of uniform composition. The remarks as to purity and dosage of the alkaloid apply to this salt also.

*Tubes of gr. 5.*

„ Aloin, B.P.

This is barbaloin, and is free from resin.

*Bottles of oz. 1 or oz. 4.*

„ Atropine.

The pure crystallised alkaloid, free from hyoscyamine and hyoscine.

*Tubes of gr. 60, bottles of oz. 1.*

„ Atropine Sulphate.

Prepared from pure atropine.

*Tubes of gr. 60, bottles of oz. 1.*

„ Berberine Sulphate.

The salt of an alkaloid obtained from *Hydrastis Canadensis*.

*Bottles of oz. 1.*

'WELLCOME' Brand—

„ Bismuth and Ammonium Citrate.

Two ounces and ninety grains (965 grains) of this preparation dissolved in sufficient distilled water to measure 1 pint, form Liquor Bismuthi et Ammonii Citratis, P.B.

*Bottles of oz. 4 or oz. 8.*

„ Bismuth Carbonate, B.P.

*Bottles of oz. 8 or oz. 16.*

„ Bismuth Salicylate (physiologically pure).

This preparation contains the proper proportion of bismuth combined with pure salicylic acid, and is uniform in composition.

*Bottles of oz. 1 or oz. 4.*

„ Bismuth Subgallate.

*Bottles of oz. 1 or oz. 4.*

„ Bismuth Subnitrate, B.P.

*Bottles of oz. 8 or oz. 16.*

„ Caffeine Citrate, B.P.

*Bottles of oz. 1, oz. 4 or oz. 8.*

„ Calcium Hypophosphite, B.P.

Readily soluble in water, forming a perfectly clear solution. It conforms strictly in all respects to the B.P. requirements.

*Bottles of oz. 1, oz. 4 or oz. 8*

„ Calomel, (*see* Mercury Subchloride).

„ Chrysarobin, B.P.

*Bottles of oz. 1 or oz. 4.*

„ Codeine.

*Tubes of gr. 60, bottles of oz. 1.*

„ Codeine Phosphate.

*Tubes of gr. 60, bottles of oz. 1.*

„ Emetine (*Pure Alkaloid*).

This is the essential alkaloid of Ipecacuanha, and not the mixture of alkaloids formerly known as Emetine.

*Tubes of gr. 15 or gr. 60.*

'WELLCOME' Brand—

„ Emetine Hydrobromide.

This is the most suitable salt of emetine for therapeutic use.

*Tubes of gr. 15 or gr. 60.*

„ Ergotin (Ext. Ergotæ P.B.).

This is made from specially selected Spanish ergot, carefully hand-picked and freed from all foreign matter.

*Pots of oz. 1.*

„ Euonymin (Ext. Euonymi Siccum P.B.).

Prepared from the true drug, *Euonymus atropurpureus*, carefully picked over by hand before extraction.

*Bottles of oz. 1, oz. 4 or oz. 8.*

„ Guaiacol Camphorate.

*Bottles of oz.  $\frac{1}{2}$ .*

„ Hydrastine (Pure Alkaloid).

The crystallised white alkaloid from *Hydrastis Canadensis*.

*Tubes of gr. 15, bottles of oz. 1.*

„ Hydrastine Hydrochloride.

Readily soluble in water.

*Tubes of gr. 15, bottles of oz. 1.*

„ Hyoscine Hydrobromide.

*Tubes of gr. 15 or gr. 60.*

„ Hyoscyamine.

Free from atropine and hyoscine.

*Tubes of gr. 5 or gr. 15.*

„ Hyoscyamine Sulphate.

*Tubes of gr. 5 or gr. 15.*

„ Ipecacuanha Sine Emetina.

Practically free from alkaloid.

*Bottles of oz. 1 or oz. 4.*

„ Iridin (Ext. Iridis Siccum).

Prepared from the carefully selected genuine drug *Iris versicolor*.

*Bottles of oz. 1, oz. 4 or oz. 8.*

„ Iron and Ammonium Citrate, B.P.

*Bottles of oz. 4, oz. 8 or oz. 16.*

'WELLCOME' Brand—

„ Iron and Ammonium Citrate (Green).

This preparation differs slightly in composition from the official citrate, and contains about 15 per cent. of iron. It is readily soluble in water, affording a bright green solution.

*Bottles of oz. 1, oz. 4 or oz. 8.*

„ Iron and Quinine Citrate, B.P.

*Bottles of oz. 1, oz. 4, oz. 8 or oz. 16.*

„ Iron Hypophosphite (*Soluble*).

Distinguished from the ordinary iron hypophosphite by its ready solubility in water. It contains about 12 per cent. of iron.

*Bottles of oz. 1, oz. 4 or oz. 8.*

„ Iron Phosphate (*Soluble*).

Soluble ferric phosphate, in the form of bright green scales. It corresponds to the preparation recognised by the United States Pharmacopœia.

*Bottles of oz. 1, oz. 4 or oz. 8.*

„ Iron Pyrophosphate (*Soluble*).

Soluble ferric pyrophosphate, in the form of green scales, corresponding to the preparation recognised by the United States Pharmacopœia.

*Bottles of oz. 1, oz. 4 or oz. 8.*

„ Leptandrin.

The true resinous principle of *Leptandra virginica*, as distinguished from much of the leptandrin of commerce, which is merely an extract.

*Bottles of oz. 1, oz. 4 or oz. 8.*

„ Lithium Benzoate.

*Bottles of oz. 1 or oz. 4.*

„ Lithium Citrate.

*Bottles of oz. 1 or oz. 4.*

„ Lithium Salicylate (physiologically pure).

*Bottles of oz. 1, oz. 4 or oz. 8.*

'WELLCOME' Brand—

- „ Manganese and Iron Citrate (*Soluble*).  
This is a scale salt, readily soluble in water. It contains about 7 per cent. of manganese, and 14 per cent. of iron in organic combination.  
*Bottles of oz. 1 or oz. 4.*
- „ Manganese and Iron Citrate with Quinine (*Soluble*).  
Contains 15 per cent. of quinine.  
*Bottles of oz. 1 or oz. 4.*
- „ Manganese and Iron Citrate with Strychnine (*Soluble*).  
Contains 1 per cent. of strychnine.  
*Bottles of oz. 1 or oz. 4.*
- „ Manganese and Iron Phosphate (*Soluble*).  
Dissolves readily in warm water. It contains about 7 per cent. of manganese and 14 per cent. of iron.  
*Bottles of oz. 1 or oz. 4.*
- „ Manganese Citrate (*Soluble*).  
This preparation is in the form of handsome, nearly colourless scales. It contains about 12 per cent. of manganese in organic combination.  
*Bottles of oz. 1 or oz. 4.*
- „ Manganese Peroxide (*Pure*).  
In distinction from the crude mineral usually found in commerce, this preparation possesses a high degree of purity, and is specially adapted for medicinal use. It contains not less than 90 per cent. of manganese peroxide ( $MnO_2$ ).  
*Bottles of oz. 1 or oz. 4.*
- „ Mercury Iodide, Red, B.P. (Mercuric Iodide).  
*Bottles of oz. 1 or oz. 4.*
- „ Mercury Iodide, Yellow (Pure Mercurous Iodide).  
Definite and constant in composition. Contains no free mercury.  
*Bottles of oz. 1.*

- 'WELLCOME' Brand—
- „ Mercury Oleate, B.P. (Mercuric Oleate).  
*Pots of oz. 1, oz. 4 or oz. 8.*
  - „ Mercury Subchloride, B.P. (Calomel).  
Prepared by sublimation. Free from mercuric chloride.  
*Bottles of oz. 4, oz. 8 or oz. 16.*
  - „ Morphine Acetate, B.P.  
*Bottles of oz. 1 or oz. 4.*
  - „ Morphine Hydrochloride.  
This salt is presented in a more compact form of crystals than that usually supplied, although identical in composition with the official salt. It is believed that its diminished bulk will render it more convenient for storage and dispensing.  
*Bottles of oz.  $\frac{1}{8}$ , oz. 1, oz. 4 or oz. 8.*
  - „ Morphine Sulphate.  
The same remarks apply to this salt of morphine as to the foregoing.  
*Bottles of oz.  $\frac{1}{8}$ , oz. 1, oz. 4 or oz. 8.*
  - „ Morphine Tartrate, B.P.  
*Bottles of oz. 1 or oz. 4.*
  - „ Pelletierine Tannate.  
Prepared from the total alkaloids of pomegranate bark.  
*Tubes of gr. 60.*
  - „ Physostigmine Hydrobromide (Eserine Hydrobromide).  
*Tubes of gr. 15.*
  - „ Physostigmine Salicylate (Eserine Salicylate).  
*Tubes of gr. 15.*
  - „ Pilocarpine Hydrochloride.  
Free from the less active isopilocarpine and the inactive pilocarpidine.  
*Tubes of gr. 15 or gr. 60.*  
*Bottles of oz.  $\frac{1}{2}$  or oz. 1.*

'WELLCOME' Brand—

„ Pilocarpine Nitrate.

This salt of pilocarpine is stable, and is the one best adapted for general use. Its purity is guaranteed by the melting point, which is indicated on each package.

*Tubes of gr. 15 or gr. 60.*

*Bottles of oz.  $\frac{1}{2}$  or oz. I.*

„ Piperine.

The pure, crystallised alkaloid of black pepper.

*Bottles of oz. I.*

„ Podophyllin (Resina Podophylli P.B.).

*Bottles of oz. I, oz. 4 or oz. 8.*

„ Quinine Bihydrochloride.

*Bottles of oz. I.*

„ Quinine Bisulphate.

*Bottles of oz. I or oz. 4.*

„ Quinine Hydrobromide.

*Bottles of oz. I.*

„ Quinine Hydrochloride.

*Bottles of oz. I.*

„ Quinine Hypophosphite.

*Bottles of oz. I.*

„ Quinine Phosphate.

*Bottles of oz. I.*

„ Quinine Quinate.

*Bottles of oz. I.*

„ Quinine Salicylate.

Prepared from physiologically pure salicylic acid.

*Bottles of oz. I.*

„ Quinine Sulphate.

This salt is presented in a more compact form of crystals than that usually supplied, although identical in composition with the official salt. It is believed that its diminished bulk will render it more convenient for storage and dispensing.

*Bottles of oz. I or oz. 4.*

**'WELLCOME' Brand—**

„ Scammony Resin, B.P.

This resin is issued in a form specially convenient for dispensing.

*Bottles of oz. 1 or oz. 4.*

„ Sodium Hypophosphite (*Pure Crystals*).

This crystalline salt contains one molecule of water of crystallisation. It is free from phosphate and phosphite.

*Bottles of oz. 1, oz. 4 or oz. 8.*

„ Sodium Salicylate, B.P. (physiologically pure).

*Bottles of oz. 4, oz. 8 or oz. 16.*

„ Sparteine Sulphate.

*Bottles of oz. 1.*

*For prices of 'Wellcome' Brand Chemicals see separate list.*

There is not a trace of  
grease in 'HAZELINE' SNOW.

It just melts upon the skin  
and is absorbed.

Before using 'Hazeline' Snow,  
the skin may be  
rough, cracked and hot;  
after, it will be  
soft as velvet,  
white and cool.

*To prevent Substitution.*

Written prescriptions are  
safer than verbal orders.

## *A Suggestion*

In view of the many cases of substitution that have come under our notice, we suggest that physicians, when ordering our products will gain an additional safeguard for their patients by specifying that they are to be dispensed in original bottles. When dispensing original packages, chemists rightly replace the maker's label by the physician's written directions.

BURROUGHS WELLCOME & Co.

Seventy-First  
Annual Meeting of the  
British Medical Association,  
Swansea, 1903.

PROGRAMME  
OF PROCEEDINGS.

**Tuesday, July 28th.**

- 9.30 A.M. Meeting of 1902-1903 Council.  
11 A.M. Church Service.  
2 P.M. to 3.15 P.M. Annual General Meeting.\*  
3.30 P.M. Annual Representative Meeting.  
8 P.M. President's Address. Presentation of Stewart Prize.

\* In the event of the General Meeting not having concluded its business by 3.15 p.m. on the Tuesday, the meeting shall stand adjourned until 2 p.m. Wednesday.

**Wednesday, July 29th.**

- 9.30 A.M. Meeting of 1903-1904 New Council.  
10 A.M. to 1 P.M. Sectional Meetings.  
2 P.M. Representative Meeting.  
8.30 P.M. Address in Medicine by Frederick Thomas Roberts, M.D., Senior Physician, University College Hospital.

**Thursday, July 30th.**

- 9.30 A.M. Meeting of Council.  
10 A.M. to 1 P.M. Sectional Meetings.  
2 P.M. Address in Surgery by A. W. Mayo Robson, F.R.C.S., Professor of Surgery, Yorkshire College.  
3.30 P.M. Representative Meeting (if required).  
7 P.M. Annual Dinner of the Association.

**Friday, July 31st.**

- 9.30 A.M. Meeting of Council.  
10 A.M. to 1 P.M. Sectional Meetings.  
2 P.M. Representative Meeting (if required).

**Saturday, August 1st.**

Excursions.

At all times  
'HAZELINE' CREAM is good  
for sensitive skin  
to keep it in trim.

When the skin is rough  
and red 'Hazeline' Cream  
becomes a necessity.

It is better than ordinary  
fatty toilet preparations  
because it contains 'Dartring'  
'Lanoline', a preparation of  
natural fat which is quickly  
absorbed by the skin.

**SERUMS ('Wellcome').**

The following telegraphic code words have been adopted for the 'Wellcome' Serums:—**MURES** for Diphtheria Antitoxic Serum 2,000 units—if the 1,000 units strength be desired, "Mures 1,000 units" should be employed; if the high potency Serums are required, the telegram should read "Mures 1,000 in 1 c.c.," or "Mures 2,000 in 2 c.c.," etc., as the case may be. **EPTO** for Anti-streptococcus Serum; **SUNAT** for Anti-tetanus Serum; **NOMO** for Anti-venom Serum. Thus a telegram reading "'Tabloid,' London,—Send six 'MURES'" would be understood to mean—"Burroughs Wellcome & Co., London.—Send six phials of Diphtheria Antitoxic Serum ('Wellcome'), each containing 2,000 (Ehrlich-Behring) units."

For formula or description see pages 79-120.
