# To the Chairman and Members of the Health Committee.

Mr. Chairman and Gentlemen,

I have the honour to submit, in accordance with the Regulations and Memoranda of the Local Government Board, my Annual Report upon the Health and Sanitary Condition of the City of Carlisle during 1913.

The Report deals with the Birth and Mortality Statistics, and other work carried out during the year, including the measures adopted against the prevention of epidemic and other diseases.

I have to thank you for your support during the year.

I am, Gentlemen,
Your obedient Servant,
JOSEPH BEARD.

Health Department,

19 Fisher Street, Carlisle,

25th April, 1914.

### Statistical Summary for the year 1913.

Area in Acres					4,488

Infectious Cases Isolated at	the	Fever	Hospi	tal	177
Total Rainfall in inches					27.17

### STATISTICS

RELATING TO

BIRTHS, DEATHS, AND CAUSES OF DEATHS, &c.

#### BIRTHS.

The number of births registered during the year was 1,164, of which 569 were males and 595 females; this number shows an increase of 15 births upon the figure for 1912.

Calculating upon the estimated population of 52,497, the birth-rate was 22.1 per 1,000, which shows an increase of 1.9 per 1,000 upon the figure for the year 1912 for the extended City.

	Numbe				
Year.			Per 1,000 of the population.	Total.	
1912	604	545	20.2	1149	
1913	569	595	22.1	1164	

The birth-rate for England and Wales, calculated as a whole during 1913, was 23.9 per 1,000, and for the 96 great towns, to which classification Carlisle now belongs, 25.1 per 1,000. The 145 smaller towns show an average birth-rate of 23.9 per 1,000, whilst the rate for England and Wales, less the 241 great and small towns, was 22.2 per 1,000.

#### ILLEGITMATE BIRTHS.

The number of illegitimate births registered during 1913 was 57, equal to 43.9 per 1,000 of the total births.

The distribution of these births to the Registration Sub-Districts was as follows:—

- St. Cuthbert's-31 illegitimate births = 56.5 per 1,000 of the total births in that district.
- St. Mary's—22 illegitimate births=39.9 per 1,000 of the total births in that district.

Stanwix—4 illegitimate births=68.9 per 1,000 of the total births in that district.

Dalston-Nil.

Wetheral-Nil.

The total number of illegitimate births registered shows a decrease of 8 upon the figure for 1912, when 65 illegitimate births were registered, equal to 56.9 per 1,000 of the total births registered, and a distribution as follows:—

- St. Cuthbert's—33 illegitimate births=50.7 per 1,000 of the total births in that district.
- St. Mary's—32 illegitimate births=64.4 per 1,000 of the total births in that district.

Stanwix-Nil

Dalston-Nil.

Wetheral-Nil.

Upon investigating the figures for 1913 I find that in 8 instances, which is equal to 14.03 per cent. of the total illegitimate births, the mother was not a resident of the City.

Table showing details of the Births in the several Sub-Registration Districts, 1913.

#### DEATHS.

The total number of deaths registered during 1913 was 821, as compared with 823 in 1912, making a gross death-rate of 15.6 per 1,000 for the year, calculated upon the estimated population living at all ages.

24 deaths occurred of persons belonging to the City in institutions and other places outside, while the deaths of 76 persons not belonging to the City occurred in public institutions and other places within the City.

Excluding the 76 deaths of persons belonging to other districts, and substituting the 24 deaths of Carlisle residents which occurred in the districts beyond the City boundaries, a nett figure of 769 remains. This gives a net death-rate for 1913 of 14.6 per 1,000 of the estimated population living at all ages.

The corrected death-rate for the City, which is obtained by multiplying the nett death-rate by the factor supplied by the Registrar-General, viz.:—1.0200 is 14.9 per 1,000 of the estimated population living at all ages.

The corrected death-rate for the whole of England and Wales for 1913 was 13.4 per 1,000 living at all ages, and for the 96 great towns, amongst which Carlisle figures, 14.7 per 1,000, the death-rate for the 145 smaller towns was 13.0 per 1,000, whilst the death-rate for England and Wales (less the 241 great and small towns) was 12.1 per 1,000 living.

Table showing details of the Deaths in the several Sub-Registration Districts, 1913.

#### INFANT MORTALITY.

This term is used as an interpretation of the mortality amongst infants under one year of age, and the mortality rate is calculated upon the number of deaths of such infants per 1,000 born during the same period.

The number of deaths of infants under one year during 1913 was 148, giving an Infant Mortality rate of 127.1 per 1,000.

During the year 1913 there was an increase of 27 deaths over the figure for 1912. The death-rate for 1912, which was the lowest on record, was 102.4 per 1,000 births.

The Infant Mortality rate for the whole of England and Wales during 1913 was 109 per 1,000 born; for the 96 great towns (of which Carlisle is one) 116 per 1,000; for the 145 smaller towns 112 per 1,000, and for England and Wales less the 241 great and small towns 96 per 1,000.

The death-rate of legitimate infants under one year of age was 119 per 1,000 legitimate births registered

The death-rate of illegitimate infants under one year of age was 280 per 1,000 illegitimate births registered.

#### ZYMOTIC DISEASES.

(Syn. Infectious Diseases.)

The total number of cases of Infectious Disease notified during the year was 271, an increase of 17 over the number notified during 1912.

The term Zymotic death-rate is applied to the aggregrate death-rate from Smallpox, Measles, Scarlet Fever, Diphtheria, Whooping Cough, Fever (Typhus, Simple Continued, and Enteric), and Diarrhœa.

The number of deaths from Zymotic Disease registered was 44, which, calculated upon the estimated population (52,497), gives a death-rate of 0.8 per 1,000.

The causes of death were registered as follows: -

Diarrhœa		 	25
Diphtheria		 	9
Whooping Cou	igh	 	7
Measles		 	3
			_
			44

The number of deaths from Zymotic Disease in 1911 and 1912 was 96 and 81 respectively.

#### SCARLET FEVER.

(Syn. Scarlatina.)

The number of cases of Scarlet Fever notified or brought to my notice by other means during 1913 was 164, being an increase of 45 on the figure for 1912.

No deaths were registered from this disease during the year.

Of the 164 cases thus recorded, 131, or 79.8 per cent., were isolated in Hospital.

During 1912, 2 deaths were registered from this disease, or equal to a rate of .04 per 1,000 of the population of the old City.

Out of the 164 cases notified as Scarlet Fever, 5 were found not to be suffering from the disease, but were suffering from another disease, as follows:—

German Measles	 2
Ephemeral Fever	 2
Desquamation, due to an irritant	 1
	_
	5
	Section 1

#### RETURN CASES OF SCARLET FEVER.

4 cases of Scarlet Fever occurred in houses to which a patient recently isolated in Hospital had returned, as shown in the following table:—

Address.		Date of Noti- fication of first case.	Date of Discharge of first case from Hospital.	Date of Noti fication of second case or cases at the same house.

#### DIPHTHERIA.

(Including Membranous Croup.)

The number of cases of Diphtheria notified during 1913 was 57, as against 47 during 1912 and 44 during 1911.

Of this number, 37 occurred in St. Mary's, 16 in St. Cuthbert's, and 4 in Stanwix Sub-Registration Districts respectively.

Out of the 57 cases notified, 6 were found to be suffering from another disease and not from Diphtheria, viz:—

	lar Tonsil Laryngit			 6
Scarlet		15		 1
			Pharyngitis	 1
				-6

During 1913, 9 deaths were registered as due to this disease, the death-rate being equal to .17 per 1,000 of the estimated population, or 15.7 per cent. of the cases notified.

Of the 57 cases, 42, or 73.6 per cent., were removed to the Isolation Hospital.

No return case occurred during the year.

Table showing number of notifications, number of cases isolated, number of deaths, and death-rates per 1,000 of population at all ages, 1908-1913.

#### ANTITOXIN.

3 applications by medical practitioners were made during the year for the free supply of Anti-Diphtheric Serum, 10,000 units being supplied.

#### SMALLPOX.

The district was free from Smallpox during the year.

#### PUERPERAL FEVER.

During the year 1 case was notified as suffering from this disease, which terminated fatally.

The case was carefully investigated and the necessary precautions were taken. The midwife attending was at once suspended, and the cleansing of her clothing, bag, and appliances carried out.

#### MEASLES.

During the year 3 deaths from this disease were registered.

Calculated upon the estimated population this gives a mortality rate of .05 per 1,000 living at all ages.

The seasonal	relatio	onship to	death was	as follow	s:
February					2
October					1

#### SCHOOL CLOSURE.

During the year the following school was closed on account of the prevalence of whooping cough.

### ENTERIC FEVER. (Syn. Typhoid Fever).

During the year 5 cases of Enteric Fever were notified.

Two of the cases, a Police Inspector and his wife, who became ill within a few days of each other with diarrhea and the passage of blood from the rectum, were apparently infected by a child in the same house, who had suffered from a similar condition 2 or 3 weeks before. The clinical features of the illness in the early stages in both cases simulated Enteric Fever. Specimens of the blood were transmitted to the Clinical Research Association, Ltd., both being negative to Widal's test, but showing a very slight clumping with Para-Typhoid (B) organisms. This slight reaction was, however, exhibited by the control.

Another of the cases nursed at home was considered shortly after notification not to be suffering from Enteric Fever.

The remaining two cases occurred at the Castle, one being a young soldier concerning whose infection nothing definite could be ascertained. The other was the child of a soldier living in the married quarters, whose mother was said to have washed the clothing of the soldier patient, but from a review of all the circumstances there appears to have been no connection between the two cases.

Table showing locality of the cases notified as Enteric (Typhoid) Fever during the year 1913, with action taken.

#### TYPHUS FEVER.

The district was free from Typhus Fever during the year.

#### POLIOMYELITIS.

During the year 3 cases of acute Poliomyelitis were notified, 1 of which terminated fatally.

The notifications were received on the 3rd October, 10th November, and 22nd November, respectively.

#### ISOLATION HOSPITAL.

### Table showing number of cases removed to hospital:—

Diseases.	No. of cases admitted	No. of cases recovered.	No. of cases died.
Scarlet Fever	131	131	
Diphtheria	42	37	5
Enteric (Typhoid) Fever	4	· 4	
Totals	177	172	5

#### NOTIFICATION FEES.

The total amount paid in fees for notifications during 1913 was £60 15s.

#### DIARRHŒA.

During the year 25 deaths from this disease were registered as against 14 in 1912 and 56 in 1911.

Calculated upon the estimated population, the mortality rate is .47 per 1,000 living at all ages.

The a	iges at	death	were	as follows: -	-

#### TUBERCULOUS DISEASES.

Under this heading are included deaths occurring from any of the following conditions:—

Pulmonary Tuberculosis (Consumption of the Lungs), Tuberculous Meningitis (including Acute Hydrocephalus), Tuberculous Peritonitis, Tabes Mesenterica, Generalised Tuberculosis, Tuberculosis of bones, joints, and other organs, Lupus, and Scrofula.

The total number of deaths registered from Tuberculosis of all forms during 1913 was 96=1.8 per 1,000 of the estimated population. Of this number 71=73.9 per cent. were from Pulmonary Tuberculosis, giving a death-rate of 1.3 per 1,000 of the estimated population at all ages.

During 1912, 76 deaths were registered from all forms of Tuberculosis, of which 65=85.5 per cent. were from Pulmonary Tuberculosis, giving a death-rate of 1.2 per 1,000 of the estimated population at all ages.

The above figures show that during 1913 there was an increase of 20 in the number of deaths from all forms of Tuberculosis, and an increase of 6 in the deaths from Pulmonary Tuberculosis.

Fifteen deaths from Tuberculosis of all forms occurred in institutions within the City, of which number 10 were due to Pulmonary Tuberculosis.

#### PULMONARY TUBERCULOSIS.

(Syn. Consumption of Lungs, Phthisis.)

This is the most frequent of Tuberculous Diseases, and the most universally prevalent of all diseases amongst white races; it is an infectious disease, and is usually transmitted from man to man, but it is also capable of being transmitted from animals to man by means of food, of which milk is the commonest example; but by far the greater number of cases are those which are caused by personal contact.

Tuberculosis is most common amongst the poor, and may be said to be a disease especially of the lower classes, and by whom it is mostly disseminated, largely as a result of ignorance, dirty habits, and other characteristic modes of living.

The town dweller more easily falls a victim to the disease than one who lives in the country, and there is a close relationship between the overcrowding of rooms, houses, and workplaces, and this disease, the overcrowding of houses very often indicating poverty, and being almost invariably associated with an impure atmosphere.

Many trades predispose the worker to this disease, especially those occupations accompanied by the formation of dust, or where work is carried out in overcrowded, hot, and moist workrooms. Intemperance and other debilitating conditions are also important factors in the predisposition to this disease.

Phthisis depends largely upon known and remediable conditions, and improvement in hygiene and other matters has led to a decline in the death-rate from this disease, but the great difficulty experienced is to get the Consumptives of the labouring classes to carry out the simplest hygienic rules or methods of precaution, the result being that persons in dangerous stages of the disease occupy the same bed as another or several other members of the

same household. It is thus that the disease secures most of its victims, finally in many instances resulting in the infection of a whole household, whereas, the precaution where possible of a separate bedroom, or, in the absence of this, a separate bed for the Consumptive, and the carrying out of certain simple rules would prevent this danger, and minimise the chances of infection of healthy persons.

### Ages at death of cases of Pulmonary Tuberculosis during 1912 and 1913.

Year.	Under 1 Year.	1-2	2-5	5-15	15-25	25-35	35-45	45-55	55-65	65–75	All Ages.

# CANCER.

The following figures include all registered deaths from causes within the general term Cancer. The number of deaths registered during 1913 was 63, as against 61 in the year 1912.

Calculating the 63 cases upon the estimated population, a mortality rate of 1.2 per 1,000 at all ages is obtained.

Table of deaths, 1909 to 1913.

	Age.			Age.				
				1909	1910	1911	1912	1913

	Totals			58	47	45	62	63

# INQUESTS.

During the year the City Coroner held 50 inquests, as compared with 53 during 1912.

Of this number 44 were held upon the bodies of those who had been resident within the City, and 6 upon the bodies of persons who had resided in other districts, but who died within the City.

13 of the inquests were held upon the bodies of children under 5 years, 5 of these being children under 1 year.

The finding of the Jury and the ages in these 13 cases respectively were:—

		Age.			
Accidentially	killed by being	ng run ov	er		3 years

#### MORTUARY.

During 1913, 12 bodies were removed to the Public Mortuary, West Walls, and post-mortem examinations were performed upon 8 of the bodies at the Mortuary

## UNCERTIFIED DEATHS.

During the year 21 deaths were registered in which no certificate was given by a medical man, and in which no Coroner's inquest was held.

During 1912, 16 such deaths were registered.

The 21 deaths in question were registered as follows.

No.	Sex.	Age.	Cause of Death as Registered.		
1	Female	66 years	Heart Failure		
2	Female	57 years	Heart Failure		
3	Female	*1 month	Inanition		
4	Male	57 years	Angina Pectoris		
5	Female	85 years	Senile Decay		
6	Male	18 months	Hæmorrhage of Brain. Convulsions		
7	Female	75 years	Heart Failure		
8	Male	42 years	Aortic Heart Disease		
9	Male	56 years	Heart Failure		
10	Male	74 years	Heart Disease		
11	Female	59 years	Heart Disease		
12	Male	*1 day	Premature Birth		
13	Male	73 years	Heart Failure		
14	Female	4 years	Acute Meningitis		
15	Female	4 years	Heart Disease		
16	Female	74 years	Heart Disease		
17	Female	27 years	Heart Disease		
18	Male	64 years	Heart Failure		
19	Male	34 years	Pit Gas Poisoning		
20	Female	73 years	Senile Decay		
21	Male	*5 minutes	Premature Birth		

<sup>\*</sup>It will be observed that three of these twenty-one uncertified deaths were infants under one year of age.

# MIDWIVES ACT, 1902.

(Supervision of Midwives.)

During 1913, 15 midwives were on the register as practising within the City.

At the end of each quarter of the year (and at all other times when necessary) all the midwives were visited, the necessary inspections of their books, bags, appliances, &c., being made.

1 midwife, in whose practice a case of Puerperal Fever occurred, was suspended. Her clothing, bag, and appliances were cleansed and disinfected.

No case was brought to my notice during the year of any unregistered or uncertified woman carrying on the practice of midwifery.

# PUBLIC SLAUGHTER-HOUSES.

MEAT INSPECTION, &c., 1913.

During the year special post-mortem examination was made upon 82 diseased carcases of meat at the Public Abattoir, as compared with 91 in 1912.

The following Table gives particulars of the carcases examined.

Animal	Total number of animals slaughtered	Number of carcases specially examined for disease	cases in which the whole carcase was pronounced	Number of cases in which portions of a carcase were pro- nounced un- fit for food	Number of condemned carcases affected with Tuber- culosis

## HOUSING OF THE WORKING CLASSES.

Housing of the Working Classes Act, 1890.

Housing, Town Planning, &c., Act, 1909.

With respect to the character of dwelling houses in the City, all classes exist, comprising 1, 2, 3, and 4-roomed tenements, and those of 5 and more rooms. The type of house predominating is the modern through ventilated house, with front and back entrances, but there are houses in the older parts of the City of the back-to-back type, particularly in the narrow lanes and courts, some of which are approached by means of a passage beneath shop premises abutting upon the street front.

All the houses are composed either of brick or stone, or a combination of the two, and generally speaking may be said to be well built, which is borne testimony to by the fact that in very few instances have the walls been found to be in such a state of dilapidation as to be unfit for alteration or repair.

A number of the single and 2-roomed tenement dwellings are relics of the handloom weaving period, the lower room in a number of instances being sunk below the level of the adjacent ground.

This class of house furnishes a greater number of the worst dwellings in the City, to which considerable attention has been given since the 1909 Act came into operation, but it is not so much a question of the dilapidation of the outer walls as the faulty architecture and

dilapidated interiors which are met with, and the absence of damp proof courses, giving rise to wetness of walls.

The Local Authority, who have recently investigated the question of housing in Carlisle, are of opinion that there is no necessity at the present time to provide any new houses, having regard to the number of vacant houses and the number of new houses in course of construction and for which plans have been approved.

During the year 674 dwelling houses were inspected under and for the purposes of the above Acts.

58 of these houses, comprising 103 dwellings, were of the tenement type, and were considered on inspection to be in a state so dangerous to health as to be unfit for human habitation.

The remaining 616 houses were not unfit for human habitation, and such defects as were discovered during the inspection were remedied under the provisions of the Public Health and Local Acts in force (see page 100).

Representations were made to the Local Authority in respect of the 58 houses which were considered unfit for human habitation, and Closing Orders made under Section 17 (2) of the Housing, Town Planning, &c., Act, 1909.

## MILK SUPPLIES.

# DAIRIES, COWSHEDS, AND MILKSHOPS, &c.

The milk supply of the City consists chiefly of that from the byres within the City, and to a smaller extent from the surrounding rural district.

There are 59 byres in the City, accommodating about 440 cows.

The cattle are under the constant supervision of the City Veterinary Surgeon, and the dairy buildings and places from which milk is sold are regularly inspected by the staff of the Health Department.

During the year 15 samples of milk were purchased for bacteriological observation from carts of persons vending milk within the City, whose dairies were outside. The samples were submitted to Professor Delepine for the purpose of inoculation tests upon guinea-pigs in order to ascertain the presence or absence of tubercle bacilli in the milk. Reports upon all the samples were to the effect that no case of Tuberculosis had occurred in the animals experimented upon.

The question of safeguarding the milk supply of the City has always received much of my personal attention, as it did for some years also that of my predecessor, Dr. Brown, but for the information of everybody concerned I think it not inopportune to outline one or two of the more modern measures of precaution which are in operation.

The Veterinary Surgeon attends at the Auction Marts of the City and makes an examination of every milk cow offered for sale. In the event of any such cow being purchased by a cowkeeper or dairyman within the City, the Veterinary Surgeon visits the premises and makes a thorough examination and submits the animal to the Tuberculin test.

The conditions of sale at both the Auction Marts enables the purchaser of a milk cow, which upon examination does not satisfy the Veterinary Inspector, to return such animal within four days of purchase.

In the case of any cow, either at the Auction Marts or anywhere else within the City, which is or appears to be suffering from Tuberculosis of the udder, indurated udder, or other chronic disease of the udder, or any bovine animal which is or appears to be suffering from Tuberculosis with emaciation, other than animals for slaughter at the Public Slaughter-houses, under the Tuberculosis Order, 1913, all such animals are ordered by the Veterinary Inspector to be sent back to the place from which they came, and the County or other Authority concerned is forthwith notified of the facts relating to the disease of the animal and the place to which it has been sent.

Public Health (Milk and Cream) Regulations, 1912.

Analytical Report for the year ended 31st December, 1913:—

1. Milk; and cream not sold as preserved cream.

_	(a) Number of samples examined for the presence of a preservative.	(b) Number in which a preservative was reported to be present.
Milk	38	Nil

(c) Instances where (apart from analysis) the requirements as to labelling or declaration of preserved cream in Article V (1) and the proviso in Article V (2) of the Regulations have not been observed ... nil

- (d) Particulars of each case in which the Regulations have not been complied with, and action taken ... ... nil
- 3. Thickening substances. Any evidence of their addition to cream or to preserved cream. Action taken where found.

  Not sought for.

# 4. Other observations-

Milk—Of the 38 samples of milk submitted for analysis, all were found to be free from preservatives.

Cream—No samples other than preserved cream were submitted for analysis.

Preserved Cream—3 samples of preserved cream were examined and the statement on the labels as to preservatives was found to be correct. The milk fat in each of the 3 samples was above 35 per cent.

# REPORT OF VETERINARY INSPECTOR.

On the commencement of the Tuberculosis Order, 1913, which came into operation on the 1st May, it was considered advisable that all newly purchased milk cows intended to be housed within the City should be submitted to the Tuberculin test. In this way dairymen as well as milk consumers would be protected from the risk of diseased dairy cattle.

The testing of all newly purchased cows entails a number of visits being made to the individual cowshed for the purpose of inoculation and the subsequent taking of the temperature of each animal, which must be done six times in order to carry out the test efficiently.

The owner of the animal informs me immediately he has made a purchase, and on the following day an examination of the animal is made, particular attention being given to the condition of the udder, and at the same time the temperature is taken. On the second evening, if the temperature is normal, the test dose of Tuberculin is injected. The temperature of the animal is again taken at the ninth, twelfth, fifteenth, and eighteenth hours after injection, thus conforming to the practice advocated by Sir John MacFadyean.

In the event of a cow re-acting to the test, the owner is given a certificate free of charge, so that all this extra but essential work is carried out without additional expense to the dairyman.

During the year 247 cows were thus tested. Of this number 67 gave a characteristic re-action suggestive of tubercular infection and were returned to the sellers.

4 notifications under the Tuberculosis Order, 1913, were received. 2 of the animals were found to be in a very emaciated condition; the other two were tested with Tuberculin, one case exhibiting a characteristic re-action, the remaining one being doubtful. Two of the animals were slaughtered under the provisions of the Order. Post-mortem examinations made upon the carcases showed advanced Tuberculosis in each instance.

All the bovine animals exposed for sale in the Auction Marts were examined, the following diseases being discovered:—

Indurated Udder	 6
Tuberculosis with emaciation	 1
Chronic disease of the udder	 1
	-
	8

The necessary notices were served on the owners, and the County Veterinary Inspector notified as to the destination of the 8 animals.

The Auction Marts have been visited regularly each Monday and 12,052 pigs examined.

At the request of the Medical Officer of Health and Chief Sanitary Inspector, 20 carcases of beef have been examined at the Public Slaughter-houses, 19 of which I certified as unfit for human food.

During the year 2 cases of Parasitic Mange were reported. The animals were isolated and treated until they were cured, the necessary cleansing and disinfection of the premises being subsequently carried out.

On the night of 13th October, 1913, whilst motoring towards the City, I observed an emaciated cow being driven over Eden Bridges. I examined the cow and asked the drover its destination, which I was informed was the Caledonian Railway Depôt, where it was to be trucked along with other cattle. In company with a Constable I visited the Caledonian Railway Depôt, and after search-

I likewise visited the North Eastern Railway and the Maryport and Carlisle Railway Depôts with a similar result. Later on the same night, in company with Inspector Percival, I visited the Maryport and Carlisle Railway Depôt, and on returning via the Viaduct I found the cow being driven from the Caledonian Railway Yard. On asking the drover where he was taking the cow to I was informed that he was going to the North British Railway Yard to truck with other cattle. I detained the animal and had her kept in the pinfold at the City Police Office. The owner was notified that he might slaughter the animal, which he did at the Public Slaughter-house. A post-mortem examination revealed generalized Tuberculosis of long standing.

4,916 examinations of milk cattle were made in order to ascertain the presence of disease likely to affect the milk supply. The following conditions likely to affect the milk secretion of the regular occupants of the byres were discovered:—

Milk Fever			 	5
Septicæmia			 	4
Pneumonia			 	3
Gastric derange	ment		 	2
Inflammation of	of the	udder	 	1
				15
				19

The milk of these 15 cows was destroyed until the animals were convalescent.

The Corporation stud consists of 22 horses, which includes 2 horses used by the Fire Brigade. I am pleased to report that during the year the condition of all the

animals has been very satisfactory, and all have been in constant and regular work.

# COVERED MARKETS.

In my Annual Reports for 1908 to 1912 I have spoken of the nuisance from the presence of dogs in the Covered Markets, and the danger to the health of the public from the contamination of food exposed for sale

Notices are posted up at several points inside the Market warning the public against bringing dogs into the building, but there are to be seen every day, chiefly belonging to occupiers of shops and stalls, dogs which spend their whole daytime in the Markets.

# SEWAGE WORKS.

During the past year I have paid several visits—all of them surprise visits—to the Sewage Works, and am satisfied that the work is carried out by those employed there in a careful manner.

# AMBULANCE.

A Horse Ambulance provided by the Corporation is under the superintendence of the Head Constable, and is housed at the Chief Fire Station, Spring Gardens Lane. It is in keeping with modern requirements, and is available for use by the general public in case of accident and injury by fire, &c., or its use may be obtained for the removal of any sick or convalescent person other than in infectious diseases (for which a special ambulance is provided).

During the year its use was requisitioned on 85 occasions.

# CARLISLE PUBLIC BATHS.

# Number of Bathers during 1913.

The total number of bathers was 63,701, as compared with 58,647 in 1912, and 60,190 in 1911.

#### WATER SUPPLY.

During the year samples of water were regularly taken from a domestic tap and submitted to chemical and bacteriological examination, the quality of the water being uniformly good.

The chemical and bacteriological results of quarterly samples are given in the following pages, together with the results of a special examination as to the action of the water upon lead.

Total monthly distribution of Water from Cumwhinton covered reservoir during 1913:—

Month.	Number of Gallons,	No. of Gallons per head, per day.

# METEOROLOGICAL STATISTICS, 1913.

# OBSERVATIONS TAKEN AT THE CEMETERY BY J. T. CHARLTON, ESQ.

The past year was exceptional in its deficiency in rainfall and in the high average temperature for the whole twelve months. As far as the rainfall goes the total deposit was about three inches below the average, and the number of days on which rain fell was 23 less than in the previous year, as may be seen from the following comparison:—

1913, 27.17ins. falling on 194 days1912, 30.01ins. falling on 217 days1911, 30.20ins. falling on 181 days

The average temperature for the year—striking the mean between the exposed thermometers on the one hand and the shaded thermometers on the other—was 57 degrees, as compared with 55.4 degrees for 1912, 57 for 1911, and 55.1 for 1910. It is rather remarkable that last year gave a record in the temperature in the sun. In 1911 a reading of 131 degrees on July 12th was the highest that had been recorded in this district, and a similar reading was made on July 1st, 1912, but last year on June 15th this reading was exceeded by two degrees, the maximum being 133. The highest shade temperature was 83 degrees on June 16th, as compared with 85 on July 16th, 1912, and 88 on July 12th, 1911. On the other hand there were no very low readings last year, the lowest being 16 degrees on March 18th and December 31st, as compared with zero on November 30th, 1912, and 12 degrees on February 2nd, 1911. Further details as to temperature may be gathered from the following monthly records:—

As is usually the case the barometrical readings were highest in the driest and lowest in the wet months. The highest reading was 30.506 inches on December 18th, as compared with 30.404 inches on April 23rd and October 4th in 1912, and 30.610 inches on February 1st, 1911. The lowest reading was 28.368 inches on March 19th, as compared with 28.780 on the

same date in the previous year and 28.356 on November 7th, 1910. The monthly records are as follows:—

#### BAROMETRICAL READINGS.

		Highest.		Lowest	Mean.	Monthly		
		Inches.		Inches.		Inches.	Range.	
January	***	30.176 on 26	th	28.958 on 3	51st	29.530	***	1.218
February		30.478 on 12	th	29.262 on	1st	29.970		1.216

The following table indicates that July is the least rainy of the summer months, but August, which had a black record in 1910 and 1912, did something last year to retrieve its character as a summer month:—

#### RAINFALL.

		1913.			1912.			1911.			
			Rainy			Rainy			Rainy

December		4.5	5.8	7.3	0.10	39.0	42.0	

The following local particulars upon observations made at the Denton Holme Allotment Gardens in relation to evaporation have been supplied to me by W. Eggleston, Esq.:—

The evaporation gauged from an open vessel 2 feet above the ground gives a total of 31.08 inches during the year. The greatest evaporation took place during the month of August, being equal to 4.45 inches. The lowest was in the month of November, being equal to .57 inch.

In June last arrangements were made with the Director of the Meteorological Office, South Kensington, to supply me with daily weather forecasts for this district, and the daily weather report and synoptic chart published by the department.

The forecast is sent by telegram and arrives about 9-30 in the forenoon, giving a forecast of the weather for 24 hours from 12 o'clock noon.

The forecast and weather report are posted, and can be seen at the Town Hall every day except Sunday (when no forecast is available); in addition a chart showing local meteorological observations taken at the Cemetery by Mr. Charlton is posted up, all of which I am led to believe are much appreciated by the inhabitants of the City.

The daily weather forecasts for this particular part of the British Isles require extreme care, as weather conditions are exceedingly difficult to prognosticate; having regard to these difficulties the daily forecast appears to me to be extraordinarily good and reliable.

# ANNUAL REPORT

OF

CHIEF SANITARY INSPECTOR.

# CHIEF INSPECTOR'S ANNUAL REPORT.

To the Chairman and Members of the Health Committee.

Gentlemen,

I have the honour of presenting to you my Annual Report upon the work of the Sanitary Inspectors for the year 1913.

The inspection of the district has been carried out periodically as in previous years. The courts, yards, and lanes which contain some of the poorer class dwelling houses have received special attention. Such nuisances as were discovered have been dealt with under the provisions of the various Health Acts and Bye-laws in force within the City, and I am pleased to be able to report that in no instance was it necessary to institute Police Court proceedings to procure compliance with notices served for the abatement of nuisances.

A great amount of good work has been done in instructing careless tenants as to their common duties, and by this means marked improvements have been effected in many dwellings and their surroundings.

I am, Gentlemen,
Your obedient Servant,
C. W. HILL,
Chief Sanitary Inspector.

# HOUSE INSPECTION.

# Table showing the particulars of Inspection.

The table does not include those houses which were dealt with under Section 17 of the Housing, Town Planning, &c., Act, 1909. These are set out on pages 77-79.

Name of Street	Number of houses inspected	Defective water-closets	Choked and defective drains, gullies, and waste pipes	Dilapidated paving and flagging	Defective roofs and spouting of houses	Insufficient drainage and w.c. accommodation	Defective walls, floors, stair- cases, & ceilings of houses	Insufficient light & ventilation	Overcrowding of houses	Animals and fowls improperly kept	Miscellaneous

## BAKEHOUSES.

There are 46 bakehouses upon the register, 4 of which are underground bakehouses.

These premises have been carefully supervised and 14 notices served to procure compliance with the provisions of the Factory and Workshop Act, viz., 11 for limewashing; 2 for dampness due to defective spouting; and 1 for defective roof.

# DAIRIES, COWSHEDS, AND MILKSHOPS.

There are 61 cow-keepers and milk-sellers upon the register. Their premises have been inspected, and the provisions of the Dairies, Cowsheds, and Milkshops Order as to air space and ventilation, cleansing of milk vessels, &c., have been enforced.

# COMMON LODGING-HOUSES.

There are three licensed common lodging-houses within the City. Several visits have been paid to these houses both day and night, and the conditions found were generally satisfactory.

# FRIED FISH AND POTATO SHOPS.

These places have been frequently inspected, and the occupiers enjoined to observe cleanly methods in the management of their business.

## ICE CREAM SHOPS.

There are 7 ice cream shops in the City. They have been frequently inspected for the purpose of ascertaining their sanitary condition, and attention has also been paid to the articles used in the manufacture of this commodity.

# OFFENSIVE TRADES.

The premises whereon offensive trades are carried on have received attention, and in each case the business was found to be conducted in a proper manner.

## VANS USED AS DWELLINGS.

All the vans entering the City to attend fairs, &c., have been inspected in order to ascertain their sanitary condition. On the whole they were found to be satisfactory.

## URINALS AND GULLIES.

These have been regularly cleansed by the staff of men employed for this purpose.

## PUBLIC MARKETS.

The Public Markets and premises where food is prepared or exposed for sale have been regularly inspected, and the necessity of the observance of hygienic measures being taken have been constantly pointed out.

# DISEASED AND UNSOUND FOOD.

The following table shows the amount of food seized or surrendered as being unfit for human consumption:—

	Nature of 1	Quantity.			
Beef					25,598 lbs.
Mutton					1,306 ,,
Pork		.,.			172 ,,
Cheese			***		224 ,,

# PUBLIC ABATTOIR AND RAILWAY SLAUGHTER-HOUSES.

Frequent visits have been paid to the Public Abattoir, which has been kept in a satisfactory condition.

The Railway Slaughter-houses have also been frequently visited and kept under careful supervision. With few exceptions they were found in a satisfactory condition.

# The following table gives the number of animals killed during the years 1904-1913:—

Year.	Beasts.	Sheep and Lambs.	Calves.	Pigs.	Total.
1904	4,075	16,860	759	4,753	26,447
1905	3,946	15,657	751	4,674	25,028

## FACTORY AND WORKSHOP ACTS.

The whole of the workshops have been inspected, and where infringements of the provisions of the Factory and Workshop Acts were discovered, steps were taken to have them remedied.

The total number of workshops upon the register, excluding bakehouses, is 232 as compared with 239 last year.

Four workshops were found to be without the Factory Abstract affixed, as prescribed by Section 128 of the Act. In each instance the Factory Inspector was notified, in accordance with the provisions of Section 133 of the Act.

Three complaints were received from H.M. Inspector of Factories, relating to Sanitary defects in factories and workshops, viz.:—

Unsuitable Sanita	ary Co	nvenience	 	1
Dirty Bakehouse			 	2
				3
				_

All the complaints were investigated and the defect remedied.

#### OUTWORKERS.

Seven lists of outworkers have been received, as required by the home work provisions of the Factory and Workshop Act, 1901.

All the outworkers' premises were visited and found to be in a satisfactory condition.

# FACTORIES, WORKSHOPS, WORKPLACES, AND HOMEWORK.

# HOUSE REFUSE REMOVAL.

14,820 loads of refuse have been collected and removed to the refuse tips and destructor, being an increase of 1,537 loads as compared with 1912. This increase is due to the fact that the period of collection in the added area extended over the whole of 1913, as compared with a period of two months in 1912.

From the centre and business parts of the City, and also from a number of streets and courts which contain small houses of the tenement type, the refuse is collected daily, and from the residential parts twice and three times a week.

In some parts of the recently added area, ashpits and ashpit privies are still in existence. From these the refuse is removed about once a fortnight, but as soon as an efficient sewerage scheme is provided, ashpits and privies will be abolished and a collection instituted on the lines of that which prevails in other parts of the City.

#### GARBAGE.

132 loads of garbage have been removed from the Public Slaughter-houses by the Corporation carters.

# INFECTIOUS DISEASES.

271 cases of infectious diseases, excluding Tuberculous diseases, have been notified, as against 252 last year. All the cases have been investigated and reported upon to the Medical Officer of Health, and 177 cases have been removed to the hospital for isolation.

# TUBERCULOUS DISEASES.

351 cases of Tuberculosis have been investigated and reported upon to the Medical Officer of Health. Verbal and printed advice as to cleanliness, mode of living, and general hygiene was given in every instance.

#### DISINFECTION.

All the houses from which cases of infectious disease were removed to hospital, and rooms in which cases were isolated at home, were either sprayed with formaldehyde or cleansed under the supervision of your inspectors.

The bedding, clothing, &c., used, or which had been in contact with the infected person, was also disinfected by steam.

The following is a	a list of	article	es disi	nfecte	d:—
Mattresses					517
Beds					283
