Divisional Public Health Office,
 "Castledene"
 Pontefract Road,
 Castleford.

Mr. Mayor, Ladies and Gentlemen,

I have the honour of presenting to you my twenty first Annual Report, being a report on the health of your district for the year 1961.

Brief Comments

1. The Castleford Birth Rate after remaining steady at around 16 per 1,000 Home Population for the preceding three years dropped in 1961 to 15.05 per 1,000.

The Death Rate shows an increase of 1.8 per 1,000 over the previous year whilst the figure for the Country as a whole has increased by 0.5 per 1,000. The increase in Castleford can in the main be attributed to the rise in deaths from influenza and pneumonia and all forms of heart and circulatory diseases. There was a marked decrease in the number of deaths from all forms of cancer, including lung cancer.

2. There have been no notified cases of poliomyelitis since 1958 and it is now 12 years since the last case of diphtheria was notified. Fourteen pulmonary and two non-pulmonary cases of tuberculosis were notified. The number of whooping cough cases shows a considerable decrease from 198 in 1960 to only 38 in 1961, whilst, on the other hand, it was an epidemic year for measles when there were 1215 cases.

3. Our immunisation and vaccination programmes against Poliomyelitis, Diphtheria, Whooping Cough and Tetanus, have been promoted with the accustomed vigour of previous years and the complete eradication of Poliomyelitis and Diphtheria with the great diminution of whooping cough shows how successful we have been. The annual B.C.G. Programme which sets itself the task of discovering all school children in the 13 year old age group who are susceptible to Tuberculosis and protecting them with the B.C.G. Vaccine so that when they leave school and enter industry they can do so without fear of developing this disease, has proceeded with most encouraging results.

4. Our hospital liaison services have also had a most successful year especially the ones relating to the geriatric and diabetic patients. If there is to be a proper balance between the hospital services available and the domiciliary care of the patients, then an effective liaison service is an absolute must. Much progress has been made during the past year in the Mental Health Service where a new innovation was the formation of the Psychiatric Social Club, in Castleford and this will be reported upon at greater length in the section on Mental Health. The Heart and Lung Association, known locally as the T.B. After-Care Committee, has continued to provide for the emergency needs of people suffering from advanced Heart and Lung complaints. The unique feature of this organisation is that, apart from a monetary grant of £165 from the County Council, all the money spent by this Committee has been raised and spent locally.

In conclusion may I thank the Chairman of the Public Health Committee and all members of the Council for their help and courteous reception throughout the year.

Yours faithfully,

J. M. PATERSON.

Medical Officer of Health.

Divisional Public Health Office,
"Castleton"
Rochester Road,
Castleton.

Mr. Mayor, Ladies and Gentlemen,

I have the honour of presenting to you my twenty fifth Annual Report,
being a report on the health of your district for the year 1961.

Chief Comments

1. The Castleton Birth Rate after remaining steady at around 16 per 1,000 from
1951 to 1959 has dropped to 15.05 per 1,000.

The Death Rate shows an increase of 1.5 per 1,000 over the previous year
while the figures for the County as a whole has increased by 0.5 per 1,000.
The increase in Castleton can in the main be attributed to the rise in deaths
from influenza and pneumonia and all forms of heart and circulatory diseases.
There was a marked decrease in the number of deaths from all forms of cancer,
including lung cancer.

2. There have been no notified cases of poliomyelitis since 1958 and it is
now 12 years since the last case of diphtheria was notified. Fourteen primary
and two non-primary cases of tuberculosis were notified. The number of
whooping cough cases shows a considerable decrease from 198 in 1960 to only 38 in
1961, whilst, on the other hand, it was an epidemic year for measles when there
were 127 cases.

3. Our immunisation and vaccination programme against poliomyelitis, diphtheria,
whooping cough and tetanus, have been promoted with the usual vigour of
previous years and the complete vaccination of poliomyelitis and diphtheria with
the great stimulation of whooping cough shows how successful we have been. The
annual S.E.C. Programme which itself the task of discovering all school
children in the 15 year old age group who are susceptible to tuberculosis and
protecting them with the S.E.C. Vaccine so that when they leave school and enter
industry they can do so without fear of developing this disease, has proceeded
with most encouraging results.

4. Our hospital liaison services have also had a most successful year especially
the ones relating to the geriatric and diabetic patients. It seems to be a
proper balance between the hospital services available and the domiciliary care of
the patients, when an effective liaison service is in operation. Much
progress has been made during the past year in the Mental Health Service where a
new liaison was the formation of the Psychiatric Social Club, in Castleton,
and this will be reported upon at greater length in the section on Mental Health.
The Heart and Lung Association, known locally as the T.B. After-Care Committee,
has continued to provide for the emergency needs of people suffering from advanced
heart and lung complaints. The unique feature of this organisation is that,
apart from a monetary grant of £105 from the County Council, all the money spent
by this Committee has been raised and spent locally.

In conclusion may I thank the Chairman of the Public Health Committee and
all members of the Council for their help and courteous reception throughout the
year.

Yours faithfully,

J. W. WATERMAN.

Medical Officer of Health.

Reproductive Wastage is a term introduced to include infant deaths and still-births as shown on the previous page, together with the loss of infant life from spontaneous or induced abortion. Although figures regarding abortion are obviously not available, it is estimated that around 13% of all conceptions in England and Wales (and locally) are lost in this way.

DEATH RATES (per, 1,000 Home Population)

	1956	1957	1958	1959	1960	1961

SECTION III

GENERAL PROVISIONS OF THE HEALTH SERVICES

A. HOSPITALS

No changes have occurred in the hospital facilities available within the Castleford Borough, thus the services remain as follows:-

General Hospital Accommodation All hospitals providing facilities for cases from the Castleford Borough are managed by the Pontefract Hospital Management Committee under the administration of the Leeds Regional Hospital Board. These hospitals are situated in Pontefract and Castleford. Additional facilities are also provided in Leeds and Wakefield.

Maternity Hospitals and Maternity Homes The booking of beds for expectant mothers at the Castleford Maternity Home is carried out through the Divisional Health Office on an agency basis. Abnormal cases are referred by their own general practitioner either for direct booking or as emergency cases to Manygates Maternity Hospital, Wakefield.

Isolation Hospitals Any case of acute poliomyelitis is normally admitted to Seacroft Hospital at Leeds, while patients suffering from other infectious diseases are admitted to either the same hospital or more generally to the Burntwood Hospital at Brierley.

B. AMBULANCE SERVICE

The West Riding County Council provides the ambulance service for the Castleford district and the local depot is situated in Smawthorne Lane, Castleford, telephone Castleford 2281.

C. LABORATORY FACILITIES

The Medical Research Council of the Ministry of Health is responsible for the administration of the Public Health Laboratory at Wood Street, Wakefield. Specimens for bacteriological, virological, entomological and chemical investigations are accepted by the Laboratory from general practitioners and Public Health Department staff.

SECTION IV

LIAISON WITH HOSPITAL SERVICES

PREVENTION - CARE AND AFTER CARE

LIAISON SCHEMES

The various schemes in operation in Castleford have continued satisfactorily during the year.

Tuberculosis Liaison Service

In addition to her routine visiting and attendances at the Pontefract Chest Clinic, the Tuberculosis Health Visitor visited 94 contacts of 15 notified cases and arranged for them to be seen and examined by the Chest Physician. Out of these one active case was discovered.

Diabetic Liaison Service

A total of 210 diabetic patients were on the register at the end of the year, and 136 visits were made by the Health Visitor during which patients were advised about their diets and given every assistance with regard to their general health and welfare.

Geriatric Liaison Service

The Health Visitor made a total of 260 visits to aged persons under the geriatric liaison scheme. Her work is of the utmost value both to the patient and to the Consultant Geriatrician for whom she provides information on the patients' social backgrounds. She attends a discharge conference at Headlands Hospital each week when case histories are discussed with a view to the supervision and follow up of patients after they have left hospital.

SECTION III

GENERAL PROVISIONS OF THE HEALTH SERVICE

HOSPITALS

No changes have occurred in the hospital facilities available within the Cantonment Hospital, since the outbreak began as follows:-

General Hospital Accommodation - All patients requiring hospital treatment for cases of the disease are admitted to the Cantonment Hospital. The hospital is managed by the Cantonment Hospital Management Committee under the administration of the Cantonment Hospital Board. Those hospitals are situated in the Cantonment and the Cantonment Hospital. The hospital is also provided in the Cantonment and the Cantonment Hospital.

Isolation Hospitals and Hospitals - The hospital of the Cantonment Hospital is situated in the Cantonment Hospital. The hospital is managed by the Cantonment Hospital Management Committee under the administration of the Cantonment Hospital Board. The hospital is also provided in the Cantonment and the Cantonment Hospital.

Isolation Hospitals - Any case of acute poliomyelitis is normally admitted to the Cantonment Hospital. The hospital is managed by the Cantonment Hospital Management Committee under the administration of the Cantonment Hospital Board. The hospital is also provided in the Cantonment and the Cantonment Hospital.

LABORATORY SERVICES

The Cantonment Hospital provides the laboratory services for the Cantonment Hospital and the Cantonment Hospital. The hospital is managed by the Cantonment Hospital Management Committee under the administration of the Cantonment Hospital Board. The hospital is also provided in the Cantonment and the Cantonment Hospital.

LABORATORY SERVICES

The Cantonment Hospital provides the laboratory services for the Cantonment Hospital and the Cantonment Hospital. The hospital is managed by the Cantonment Hospital Management Committee under the administration of the Cantonment Hospital Board. The hospital is also provided in the Cantonment and the Cantonment Hospital.

SECTION IV

LABORATORY SERVICES

LABORATORY SERVICES - CASE AND OTHER CASES

LABORATORY SERVICES

The Cantonment Hospital provides the laboratory services for the Cantonment Hospital and the Cantonment Hospital. The hospital is managed by the Cantonment Hospital Management Committee under the administration of the Cantonment Hospital Board. The hospital is also provided in the Cantonment and the Cantonment Hospital.

LABORATORY SERVICES

The Cantonment Hospital provides the laboratory services for the Cantonment Hospital and the Cantonment Hospital. The hospital is managed by the Cantonment Hospital Management Committee under the administration of the Cantonment Hospital Board. The hospital is also provided in the Cantonment and the Cantonment Hospital.

LABORATORY SERVICES

The Cantonment Hospital provides the laboratory services for the Cantonment Hospital and the Cantonment Hospital. The hospital is managed by the Cantonment Hospital Management Committee under the administration of the Cantonment Hospital Board. The hospital is also provided in the Cantonment and the Cantonment Hospital.

LABORATORY SERVICES

The Cantonment Hospital provides the laboratory services for the Cantonment Hospital and the Cantonment Hospital. The hospital is managed by the Cantonment Hospital Management Committee under the administration of the Cantonment Hospital Board. The hospital is also provided in the Cantonment and the Cantonment Hospital.

Spastics Liaison Service

At the end of 1961 there were on the spastics register 22 adults and 42 children and during the year 85 visits were paid to these patients. The parents and relatives of this type of case are to be admired for the way in which they cope with the obvious problems and the Health Visitor's task is to help them both with advice and, what is equally as important, reassurance.

Maternity Home Liaison

The Castleford Maternity Home is visited, twice and occasionally three times each week by the liaison health visitor who acts as a direct link between Matron and the District Health Visitors. Useful information regarding expectant mothers can in this way be readily obtained by Matron while on the other hand the District Health Visitor is given relevant information about the newly delivered mother and baby.

Castleford, Normanton & District Hospital Liaison Service

One regular visit each week is made to the hospital by the Health Visitor as well as further visits when necessary.

SECTION V (A)CLINICS AND TREATMENT CENTRES

	DAYS HELD	TIMES
<u>INFANT WELFARE</u>		
Old Council Offices, Sagar Street, Castleford.	Mon. & Thurs.	2 - 4 p.m.

St. Paul's Church, Glass Houghton.	Tuesday	2 - 4 p.m.
West Villa, Lumley Street, Hightown.	Monday	2 - 4 p.m.
<u>ANTE-NATAL</u>		
Old Council Offices, Sagar Street, Castleford.	Alternate Weds.	2 - 4 p.m.
Child Welfare Centre, The Square, Airedale.	1st, 2nd & 4th Tuesdays.	2 - 4 p.m.
St. Paul's Church, Glass Houghton.	2nd & 4th Weds.	2 - 4 p.m.
West Villa, Lumley Street, Hightown.	Thursday	2 - 4 p.m.
<u>RELAXATION CLASSES FOR EXPECTANT MOTHERS</u>		
"Castledene", Pontefract Road, Castleford.	Tuesday	2.30 - 4 p.m.
Child Welfare Centre, The Square, Airedale.	Wednesday	2 - 4 p.m.
<u>SCHOOL CLINICS</u>		
Old Council Offices, Sagar Street, Castleford.	Wednesday	9 a.m. - 12 noon
<u>MINOR AILMENTS CLINICS</u>		
Old Council Offices, Sagar Street, Castleford.	Monday & Friday	9 - 10.30 a.m.
<u>Sessions are also held weekly at the following schools:-</u>		
Redhill Infants'	Whitwood Mere Infants'	
New Fryston J.M.I.	Hightown C.of E. J.M.I.	
Glass Houghton J.M.I.	Castleford Nursery	
Ashton Road Infants'	Airedale Infants'	
Cutsyke Infants'	Oyster Park	
<u>ULTRA VIOLET LIGHT CLINIC</u>		
"Castledene", Pontefract Road, Castleford.	Tuesday & Friday	9 - 11 a.m.

Health Status Service

At the end of 1961 there were on the waiting register 23 adults and 42 children and during the year 1962 visits were made to these patients. The parents and patients of this type of case are included for the way in which they cope with the chronic problem and the Health Visitor's task is to help them with advice and, when in hospital, treatment.

Maternity Home Visits

The Maternity Home Visits team is made up of three and occasionally four Health Visitors. The Health Visitor visits the mother and child at home during the first week of the infant's life. The visits are made as a direct link between the mother and the Health Visitor. The Health Visitor provides information regarding expected normal development of the child and also on the other hand, the Health Visitor is given relevant information about the newly delivered mother and baby.

Consultant, Paediatric & Specialist Health Status Service

One regular visit may need to be made to the hospital by the Health Visitor as well as further visits when necessary.

4 - 5½ lbs.	-	4	2	30	-	-	32
TOTAL	-	5	3	38	1	2	38

SECTION V(D)HOME NURSING SERVICE

Home Nurses employed by the County Council visit the homes of sick patients and provide general nursing care and injections for a variety of conditions under the direction of the patients' general practitioners. The Nurses' work involves attendance on any person of any age but the majority of cases are of the aged group.

Year	No. of cases	Total number of visits
1960	678	21,418
1961	709	21,716

Average visit load in Castleford per Home Nurse - 3102

Average accepted visit load per Home Nurse - 3000

MIDWIFERY SERVICE

Domiciliary midwives are provided by the County Council to attend home confinements. Each nurse has had special training in the administration of analgesics and, as well as all the normal midwifery equipment, is issued with a gas and air machine and a trilene machine for use in providing light anaesthesia during childbirth.

The midwives in Castleford also hold a Relaxation Exercise Class for expectant mothers each week at "Castledene". Although the practice of helping the expectant mother in her approach to her confinement by means of relaxation and exercises is no longer regarded as a new innovation, there is always scope, as in all things, for fresh ideas and improved techniques and with this in mind, the County Council organise refresher courses which midwives attend periodically. These courses enable the midwives to add to their knowledge of ante-natal exercises and to receive instruction in teaching methods.

SECTION VI (a)

HOME NURSING SERVICE

Home nurses employed by the County Council visit the homes of sick patients and provide general nursing care and instruction for a variety of conditions under the direction of the patients' general practitioners. The nurses' work involves attendance on any person of any age but the majority of cases are of the aged and

Year	No. of cases	Total number of visits
1960	675	21,118
1961	719	21,776

Average visits per case in Castleford for Home Nurses - 31.02

Average accepted visits per case - 30.00

NURSING SERVICE

Domestic nursing services are provided by the County Council to assist home nursing. Home nurses have had special training in the administration of medicine and, as well as all the normal nursing services, are trained with a gas and air machine and a Collins machine for use in providing light anaesthetics during operations.

The services in Castleford also hold a Maternity Liaison Clinic for expectant mothers each week at "Castleford". Although the practice of having the expectant mother in her own home is not encouraged by means of relaxation and analgesia, the service regarded as a new development in this respect, as in all other, for these ideas and improved techniques and with this in mind, the County Council continues to provide services which are of the highest standard. These services enable the mothers to add to their knowledge of ante-natal care and to receive instruction in birthing periods.

HEALTH VISITING SERVICE

A full complement of staff, including one tuberculosis Health Visitor, was employed in the Borough, and in accordance with the National Health Service their duties were many and varied.

Home visiting, to advise on the care of young children, persons suffering from illness (including adults) and expectant and nursing mothers, is carried out by Health Visitors whilst cleanliness inspections of school children is carried out in schools by the Assistant Health Visitors.

During the year under review, a total of 18,811 effective visits were made by qualified Health Visitors to the under-mentioned classes of cases:-

T.B. Households	-	1711
Expectant mothers	-	474
Children under 1 year	-	3948
Children 1 - 2 years	-	1459
Children 2 - 5 years	-	1325
Others	-	9894
		18,811

No. of children under 5 visited during the year	-	1598
Total number of families or households visited	-	2736

SECTION V (E)DOMESTIC HELP SERVICE

Domestic help is provided wherever and whenever necessary to any household where there is a medical need. Cases generally are classed under the headings of Maternity, Tuberculosis, Aged and Infirm and a further category known as "Others". By far the greatest user of this service is the Aged or Infirm patient who, not unnaturally shows a great appreciation of any help provided.

Applicants are required where possible to make some financial contribution to this service and this is assessed according to their circumstances by the Welfare Department.

During the year the equivalent of 36½ full-time Home Helps was allocated to this Division and the number of cases in Castleford provided with the services of a Home Help was 480, made up as follows:

Type of case	No. of cases	Hours	Percentage
Maternity	10	335	0.7
Tuberculosis	11	848	1.7
Chronic	440	47030	94.1
Others	19	1726	3.5
	480	49939	100.0

Castroville	33	234
Alameda	6	52

RELATIVE VISITOR SERVICE

A full complement of staff, including one Industrial Health Visitor, was employed in the Bureau, and in accordance with the National Health Service their duties were duly and varied.

Home visiting, to advise on the care of young children, persons suffering from illness (including children) and pregnant and nursing mothers, is carried out by Health Visitors while physicians' examinations of school children is carried out in schools by the Assistant Health Visitors.

During the year under review, a total of 18,611 effective visits were made by qualified Health Visitors to the under-mentioned classes of persons:-

T.B. Sanatoria	1711
Expectant mothers	474
Children under 5 years	3043
Children 5 - 12 years	1452
Children 12 - 15 years	1225
Others	3204
Total	18,611

No. of children under 5 visited during the year - 1225
Total number of families or households visited - 2136

SECTION V (B)

RELATIVE VISITOR SERVICE

Domestic help is provided wherever and whenever necessary to any household where there is a medical need. Cases generally are placed under the headings of Maternity, Tuberculosis, Age and Infants and a further category known as "Others". As far as the greatest part of this service is the Age and Infants category and, not unusually, where a great proportion of any help provided.

Applications are accepted where possible in cases where financial contribution to this service and this is assessed according to local circumstances by the Relief Department.

During the year the equivalent of 30 full-time Home Help was allocated to this Division and the number of cases in Districts provided with the services of a Home Help was 430, made up as follows:-

Type of case	No. of cases	Hours	Expenditure
Maternity	10	132	0.7
Tuberculosis	11	248	1.7
Geriatric	440	1700	30.1
Others	19	176	3.5
Total	480	2056	100.0

SECTION V (F)

PREVENTION OF ILLNESS, CARE AND AFTER CARE

Provision of Nursing Equipment in the Home

Equipment such as special bedsteads, bed cradles, bed tables, commodes, lifting hoists, wheelchairs and walking aids can be loaned, free of charge, to patients being nursed in their own homes. The number of such loans to Castleford patients amounted during the year to 185.

Recuperative Home Treatment

Where it is considered that a patient's recovery from illness is likely to be assisted by a short stay in a recuperative home, this can be arranged under the County Council's Recuperative Home Treatment Scheme. Any charge made to the patient is based upon an assessment of his or her financial circumstances. During 1961 nine applications were received and approved and all the patients took advantage of the arrangements made.

Chiropody Treatment

Chiropody treatment is available free of charge to men and women of pensionable age, the physically handicapped and expectant mothers. The service is provided by the County Council throughout the agency of the local Old People's Committee. Normally the patients visit the Chiropodist for treatment but where necessary on medical grounds the Chiropodist can be authorised to attend the patient's own home. Each patient is allowed six treatments in any 12 months and during the year under review 927 patients received a total of 4234 treatments.

SECTION V (G)

MENTAL HEALTH SERVICE

Psychiatric Social Club

The main innovation in the Service during 1961 was the formation of the Psychiatric Social Club at the Sagar Street Clinic, Castleford. The first meeting was held in the second week in September when the attendance was 13, but since then this has increased until by the end of the year the weekly average was over 20.

A wide variety of ages is catered for but the 30/40 group is mainly represented and although the members have suffered from various mental illnesses, the majority are chronic schizophrenic patients.

Each meeting is attended by the Senior Mental Welfare Officer and, usually, three Mental Welfare Officers and this arrangement permits not only of helping to organise activities, but also allows of individual attention being given to those patients who wish to discuss their varied problems.

Originally it was intended to run the Club on orthodox lines with the members forming their own committee. However, the few experiments that have been tried in giving leadership to various members have suggested that such a course might lead to undue dominance by the more forceful personalities in this community. As a result, no Committee has been formed and the Club is run more on the principle of a true democracy in which each member has a voice in what shall be done.

Before the formation of the Club, a study of case histories revealed that many patients, by reason of their mental illness, were seriously limited in the activities they could enjoy outside their own homes. In view of this it was decided to place emphasis on entertainment in the hope that recreation in a friendly atmosphere might, in itself, prove of greater therapeutic value. The success of this venture has been both surprising and gratifying, with noticeable improvement in the personal relationships of most of the members. For example one young woman who had become so introverted that she had rarely left the house during the preceding three years, now attends every week and joins in games and dancing.

The Mental Health Service has been in operation in Castleford since as far back as 1950 when one Mental Health Social Worker covered the needs of the whole of the Divisional area and we also had a Training Centre situated at Lock Lane, Castleford, for the mentally handicapped. Since the implementation of the Act of 1959 this service has gone forward with vigour under the local jurisdiction of the Divisional Medical Officer.

A Mental Welfare Officer is attached to Castleford for supervisory work in the Township. The services available include:-

- (a) Assistance in the admission and conveyance to Psychiatric Hospitals of those patients in need of specialist nursing or treatment.
- (b) The care and after-care in the community of subnormal and mentally ill persons who are on the psychiatric register. Under this heading the Mental Welfare Officer advises and helps patients and their relatives in a wide variety of social, environmental and emotional problems, often working in close conjunction with the Hospital Consultants and General Practitioners.
- (c) Help in finding suitable employments, either via the Ministry of Labour services or on occasion by direct approach to sympathetic employers, and maintaining contact with the employer and the patient.
- (d) The compilation of social histories and background reports as required by the Hospital Psychiatrist.
- (e) The dissemination of mental health hygiene propaganda to correct unwise handling of patients and helping to neutralise all the misconceptions that have grown up over the years concerning the mentally disordered.

The volume of work done is increasing visibly as time goes on, so much so that an increase in the number of Mental Welfare Officers is anticipated in the future. This Service calls for close liaison with the general medical practitioners to whom I am indebted for their whole hearted co-operation.

It is envisaged that different types of Hostels and Homes will have to be provided for those patients who do not require the specialist services of a Psychiatric Hospital but who, nevertheless, are in need of a greater degree of care, attention or training than would otherwise be available in their own homes. In order to ensure that the requirements of your district are adequately catered for, I am at present undertaking a review of the possible future needs of all mentally disordered persons residing in the area.

The County Council, as Local Education Authority, have a duty under the Education Act, 1944, to arrange for the medical examination of any child over the age of two who appears to be suffering from such a disability of the mind as to make him or her unsuitable for education at school or who, it is thought, may be in need of special educational treatment as a handicapped child. This examination is designed to afford the County Council medical advice to enable them to decide (a) the kind of educational treatment required or (b) whether the child is unsuitable for education at school. Some children are so handicapped that normal and special schools would be of no value to them and these children are given help in ways more suited to their needs. Should the Council decide that a child is unsuitable for education at school it is their duty to place this fact on record. The child will then not be able to attend any of the County Council's Schools but as the Local Health Authority the responsibility for helping him or her will still remain that of the County Council. The decision of the County Council is, of course, not recorded until the parent or guardian of the child has been offered the opportunity of appeal to the Minister of Education.

The Mental Health Services has been in operation in Castleton since the late 1950s when the Mental Health Services covered the needs of the whole of the Divisional area and we also had a Training Centre situated at Jack Lane, Castleton, for the mentally handicapped. Since the implementation of the Act of 1959 this service has been forward with vigour under the local jurisdiction of the Divisional Medical Officer.

A Mental Welfare Officer is attached to Castleton for supervisory work in the Township. The services available include:-

- (a) Assistance in the admission and conveyance to psychiatric hospitals of those patients in need of specialist nursing or treatment.
- (b) The care and after-care in the community of subnormal and mentally ill persons who are on the psychiatric register. Under this heading the Mental Welfare Officer advises and helps patients and their relatives in a wide variety of social, environmental and emotional problems, often working in close consultation with the Hospital Consultants and General Practitioners.
- (c) Help in finding suitable employment, either via the Ministry of Labour services or on occasion by direct approach to sympathetic employers, and maintaining contact with the employer and the patient.
- (d) The completion of social histories and background reports as required by the Hospital Psychologist.
- (e) The dissemination of mental health hygiene propaganda to correct misapprehensions of patients and helping to neutralise all the misconceptions that have grown up over the years concerning the mentally disturbed.

The volume of work done is increasing steadily as time goes on, so much so that an increase in the number of Mental Welfare Officers is anticipated in the future. This service calls for close liaison with the General Medical Practitioners to whom I am indebted for their whole-hearted co-operation.

It is envisaged that different types of hospitals and homes will have to be provided for these patients who do not require the specialist services of a Psychiatric Hospital but who, nevertheless, are in need of a greater degree of care, attention or training than would otherwise be available in their own homes. In order to ensure that the requirements of your district are adequately catered for, I am at present undertaking a review of the possible future needs of all mentally disturbed persons residing in the area.

The County Council, as Local Education Authority, have a duty under the Education Act, 1944, to arrange for the medical examination of any child over the age of two who appears to be suffering from such a disability of the mind as to make him or her unsuitable for education at school or who, if in school, may be in need of special educational treatment as a handicapped child. This examination is designed to afford the County Council medical advice to enable them to decide (a) the kind of educational treatment required or (b) whether the child is unsuitable for education at school. Some children are so handicapped that normal and special schools would be of no value to them and some children are given help in ways more suited to their needs. When the Council decide that a child is unsuitable for education at school it is their duty to place this fact on record. The child will then not be able to attend any of the County Council's Schools but as the Local Education Authority are responsible for helping him or her will still remain that of the County Council. The decision of the County Council is, of course, not retrospective until the parent or guardian of the child has been afforded the opportunity of appeal to the Minister of Education.

To provide for the needs of such children an Occupation Centre was opened in Lock Lane, Castleford, in 1950 for mentally handicapped children. Although the conditions were primitive at this centre, much good pioneer work was done and continued to be done until 1960 when a new, more commodious building was provided at the Airedale Training Centre in which there were class rooms similar in structure and design to ordinary modern day schools. Every effort has also been made during this period to standardise the training of the teachers in the Centre and at the year end the male instructor for the senior boys was in the process of undergoing a full time course of training at a recognised training school in Birmingham. The Airedale Centre provides comprehensive accommodation for 52 pupils in the Junior Wing and 24 in the Senior. Apart from those attending from the Castleford and Normanton district, children also attend from the adjacent areas of the Pontefract, Rothwell, Tadcaster and Morley Health Divisions.

The basic "subjects" taught are discipline, habit formation and sense training, since, as will be readily appreciated, those habits take far longer for them to learn than normal children. They are also taught dancing, physical training, percussion band practice, miming and eurythmics, speech training, time, money, social training, art, singing etc.

In the case of the senior classes, the boys do woodwork, stool making, leatherwork, physical training, gardening, money, time, vocabulary etc., and the girls sewing, knitting, domestic science, physical training, dancing, eurythmics, time, money, art, social training, vocabulary etc. These subjects provide a very full curriculum indeed. It is, however, an established fact that work of a simple repetitive nature far less frequently leads to boredom in the case of the mentally handicapped and efforts are being made to include in the curriculum simple crafts which could be made use of in the community.

In the coming year it is hoped to set in motion a scheme to extend the size of the present building so as to take 40 Junior and 64 Senior Pupils. There will also be a wing for a Special Care Unit.

An active Parent Teachers Association has been in operation for a number of years now and the parents of these children learn of the problems of others similarly placed. In this way they can the better handle their own particular problem. This committee fulfills a most utilitarian purpose in providing funds for additional equipment and for outings for the pupils.

SECTION V (H)

HEALTH EDUCATION

Health Education covers a wide variety of subjects and concerns not only the welfare of young children but also the family as a whole.

Because many of their husbands are shift workers, mothers in this area have little time to spare, between the preparation of meals, to spend more time at the clinic than it takes to have baby weighed and talk confidentially to the Health Visitor about any problems they may have. Any Health Education at the Infant Welfare Centre, therefore, must be presented in a brief but forceful manner and in this respect the shorter animated type of cine film has been found to be much more effective than the longer type which tends to lack the force in emphasising the major points.

Displays at the Clinic on particular subjects are very useful, especially when they stress a particular type of immunisation such as diphtheria and whooping cough etc., and this kind of display does, it is found, have a definite effect upon the mothers.

Apart from the work done in the Clinics, Health Education is also carried out in the schools, where films are shown and posters displayed and at the relaxation clinic where, naturally, the films shown and talks given are on topics of special regard to the expectant mothers.

To provide for the needs of such children an Occupation Centre was opened in Lock Lane, Castleford, in 1930 for mentally handicapped children. Although the conditions were primitive at this time, much good pioneer work was done and continued to be done until 1950 when a new, more modern building was provided at the Alameda Training Centre in which there were eleven rooms adapted in accordance with the needs of the children. Every effort has also been made during this period to standardize the training of the teachers in the Centre and at the same time the staff instructor for the senior boys was in the process of undergoing a full time course of training at a recognized training school in Birmingham. The Alameda Centre provides comprehensive accommodation for 25 pupils in the Junior Wing and 24 in the Senior Wing from those attending from the Castleford and Thornton districts, children also attend from the adjacent areas of the Lutterworth, Rothwell, Tadworth and Harby Health Divisions.

The basic "subjects" taught are discipline, habit formation and general training, as well as specially adapted, those habits take for longer for them than normal children. They are also taught dancing, physical training, domestic hand practice, music and mathematics, speech training, time, money, social training, art, singing etc.

In the case of the senior classes, the boys do woodwork, steel setting, leatherwork, physical training, gardening, sewing, time, vocabulary etc., and the girls sewing, knitting, domestic science, physical training, dancing, embroidery, time, money, art, social training, vocabulary etc. These subjects provide a very full curriculum indeed. It is, however, an established fact that work of a simple repetitive nature for some handicapped pupils is provided in the case of the severely handicapped and efforts are being made to include in the curriculum simple crafts which could be made use of in the community.

In the coming year it is hoped to set in motion a scheme to extend the use of the present building so as to take 40 Junior and 40 Senior pupils. There will also be a wing for a Special Day Unit.

An active Parent Teachers Association has been in operation for a number of years and the parents of these children form of the problems of others similarly placed. In this way they can the better handle their own particular problem. This committee fulfills a most vital function in providing funds for additional equipment and for setting for the pupils.

SECTION V (B)

HEALTH EDUCATION

Health education covers a wide variety of subjects and concerns not only the welfare of young children but also the family as a whole.

Because many of their husbands are shift workers, mothers in this area have little time to spare, between the preparation of meals, to spend more time at the clinic than it takes to have baby weighed and talk confidentially to the Health Visitor about any problems they may have. Any Health Education at the Infant Welfare Centre, therefore, must be presented in a brief but forceful manner and in this respect the shorter animated type of film has been found to be much more effective than the longer type which tends to lack the focus in emphasizing the major points.

Displays at the Clinic on particular subjects are very useful, especially when they stress a particular type of immunization such as diphtheria and whooping cough etc., and this kind of display does, it is found, have a definite effect upon the mothers.

Apart from the work done in the Clinic, Health Education is also carried out in the schools, where films are shown and posters displayed and at the relaxation clinic where, naturally, the films shown and talks given are on topics of special regard to the expectant mothers.

SECTION V (I)

SCHOOL HEALTH SERVICE

Routine medical examinations of school children are carried out in all maintained schools during each year. Each child, during its school life, is examined on four occasions, when he or she starts school, in the 8th-9th year, in the 11th-12th year and in the last year at school.

Consequent upon these examinations any child found to be suffering from any defect is recommended for special educational treatment best suited to his or her physical or mental condition. Should a consultant opinion be required, this is arranged for in conjunction with the child's general practitioner. Minor ailments are referred to the School or Minor Ailments Clinics held at the Sagar Street Child Welfare Centre and at various schools.

Specialist services are also provided and these include child guidance, speech therapy, paediatric, orthopaedic and ophthalmic clinics.

Periodic Inspections

Year of Birth	No. of pupils inspected	Physical condition of pupils inspected	
		Satisfactory	Unsatisfactory
1957 & later	136	136	-

Vaccination Against Polio

The following table shows the number of adults and children who had, by the end of 1961, received vaccination against Polio.

Year	0 - 4 years		5 - 14 years		15 years & over	
	1st injection	2nd injection	1st injection	2nd injection	1st injection	2nd injection
1961	525	614	570	561	1961	1961

In addition to those shown in the above table, 2141 fourth injections were given to children in the 5 - 14 years age group.

Vaccination Against Whooping Cough

The following table shows the vaccinations carried out over the past six years.

Year	Under 6 months to 1 year	1-5 years	5-9 years	10-14 years	15 years & over	Total
1956	-	128	21	2	4	255
1957	2	144	30	2	-	268
1958	6	100	61	20	1	288
1959	6	121	91	60	4	319
1960	2	120	93	61	6	382
1961	120	122	33	19	6	300

Vaccination Against Diphtheria

The following table shows the vaccinations and re-vaccinations carried out since 1956.

Year	Under 1 year	1-4 years	5-14 years	15 years and over	Total
1956	12	1	3	13	39
1957	35	4	2	16	57

BOROUGH OF CASTLEFORD

ANNUAL REPORT OF THE SENIOR PUBLIC HEALTH INSPECTOR, FOR THE YEAR ENDED 31ST DECEMBER, 1961, BEING A REPORT OF THE SANITARY CONDITIONS OF THE TOWN

Mr. Mayor, Ladies and Gentlemen,

I beg to place before you my eighteenth Annual Report in which is given a brief review of both the workings of my department and of the sanitary conditions obtaining in the district during the year 1961.

Once again the years workings have been consistent and progressive without being particularly spectacular. I hope to show in the course of the report, details of the progress made.

In considering the operations of any one year it is always interesting to note and review any changes in legislation, and 1961 has proved to be a year producing quite a number of new enactments affecting our work; some have very materially affected our powers, whilst others only have a lighter bearing. Details are briefly as follows:-

Public Health Act, 1961

This Act introduced amendments and additions to the Public Health Act of 1936, many of which were based on provisions introduced throughout the country by numerous local Acts, thus the old Act of 1936 which has for some time needed modification and improvement, has been improved to deal with up to date problems.

The main alterations to the law are set out below under a number of special headings:-

Building Regulations

This Act provides for the making of Building Regulations in lieu of local bye-laws and will thus standardise conditions throughout the country.

Drainage

Summary powers are given to public health inspectors to examine and test drains and to remedy stopped drains without reference to the appropriate Committee. Local Authorities are also empowered to repair drains and sewers after several days notice. This will enable us to deal with matters which are urgent more expeditiously than under the '36 Act. In addition further powers regarding the sealing up of old drains and penalties for the improper construction of drains are introduced.

Buildings

Powers are now given for a local authority to serve notice of intention to do urgent repairs where delay in carrying out those works would be detrimental. This Section has proved most useful in dealing with urgent repairs after the severe gale which occurred early in 1962. Other Sections of the Act empower local authorities to deal with ruinous buildings and sites and give improved control over the demolition of buildings and the sealing of drains.

In the case of new buildings it is now possible to insist that no house be built without proper bathroom and foodstore facilities and also that no cellars shall be built below sub-soil water level, and where tall buildings over-reach the chimneys of existing buildings, satisfactory alterations of those chimneys can be insisted upon.

Nuisances

A local authority may now have rubbish removed from vacant land in built up areas and additional powers are given for dealing with filthy and verminous premises. Nuisances caused by the discharge of steam can now be dealt with and other provisions cover the sealing of disused petrol tanks, the destruction of objects which are a nuisance and powers to make bye-laws controlling hairdressers.

Housing Act, 1961

This Act is a further amending Act to the Housing Act, 1957, and although it introduces little in the way of new material, it brought in improvements, particularly of a financial nature. The new legislation introduced was to give powers to local authorities to deal with houses let in multiple occupation and is designed to combat the unsatisfactory conditions which have arisen in many towns caused by the letting of large houses in small units to many families or individual persons. It gives power to the local authority to obtain adequate facilities for the persons using the accommodation and provides for the setting up of a further management code which can be rigidly enforced in order to maintain clean and wholesome living conditions. Other provisions allow for the reduction of overcrowding, but this is limited to the prohibition of re-letting of rooms becoming vacant when the overall premises are overcrowded.

On the financial side considerable alterations were made in the law governing subsidies, designed to ensure that the government grants are based on the financial need of the local authority, with particular reference to its housing account.

A number of alterations were made in the rules covering the provision of internal Water Closets which removed the discrepancy between Standard and Discretionary Grants. In addition the amount of the permitted increase of the rent on the house which was improved was raised to 12½% of the owners expenditure and this is designed to encourage the improvement of rented properties. Reference will be made to this later in the report.

Factories Act, 1961

This Act consolidated a number of Acts starting with the old Factories Act of 1937 and many subsequent amending Acts up to 1959. As with most consolidating Acts, little alterations of existing powers are made but the provisions placing the duty of inspection of factories for cleanliness, overcrowding, temperature, ventilation, lighting and drainage of floors in non-mechanical factories, in the hands of the local authority, and the provisions relating to sanitary conveniences etc., in all factories are still retained by local Councils.

Other Acts with less direct bearing but still of interest, are the Land Compensation Act of 1961 which covers compensation provisions relating to compulsory purchase including slum clearance, and the Rivers (Prevention of Pollution) Act, 1961, which further controls the discharge of effluents to rivers and water courses.

Two Acts which were passed in the latter part of 1960 came into full effect in the year under review, these were The Caravan Sites and Control of Development Act, 1960, which gave greater control over caravan sites, and although there are few sites within the Borough, the Act gives better control over the indiscriminate placing of caravans which does occur from time to time. The second of these Acts was The Noise Abatement Act, 1960, which became operative in the last month of 1960 but which appeared to come more to the notice of the public in 1961.

HOUSING

The housing of the people must always be a matter of vital importance and I make no apology for endeavouring to produce a very full review of this work. Since the passing of the Act of 1954, we have been heavily engaged in clearing our unfit properties, securing repairs for those of justifiable life and of course assisting in the modernisation and improvement of those houses which presented the opportunity. It is very gratifying to be able to report that our programme has been fully assisted and never retarded by the construction of new houses and the synchronisation of the Council's building programme with its slum clearance work must be commended. I take first new housing.

New Housing

In 1961 the Council built 144 houses to meet slum clearance and general housing needs. The majority of these were built on the Love Lane Estate which is working in extremely well as an extension and enlargement of the redeveloped site of the former Half Acres Clearance Areas. In addition to this a plot of land in the Whitwood Mere Area was developed by the building of three storey dwellings consisting of single storey flats on the ground floor and two storey maisonettes on the first and second floors. By the end of the year 4 dwellings were completed and this estate will meet a long standing need for both single and three bedroomed dwellings as a shortage of these has caused some difficulty in this part of the town. Thus persons from slum clearance areas in the Whitwood Mere Area, will be able to be re-housed a short distance away and by adjustments of tenancies with neighbouring two bedroomed estates, better useage of housing accommodation will be achieved. In addition to these houses, 12 three storey flats were completed at Ferry Fryston.

Private enterprise built 48 houses during the year in various parts of the town, and it was gratifying to note that a fairly large area of land in the Hillcrest/Ferry Fryston area is planned for development for private housing and in fact 32 houses were completed on this estate. There has been some difficulty for many years in finding sites for private development and this has resulted in a number of families moving outside the town. It is pleasing, therefore, to see this estate being started and also two other plots at Hensby Road and Aketon Road, Cutsyke, being planned for this type of development.

Slum Clearance

This work was again continued in 1961 when the programme laid down for the year was reported upon early in the year and final confirmation of all the areas and individual houses was approved before the end of the year. Figures relating to this work are given in the following table:-

Clearance Areas

The following areas were reported upon in 1961 and were confirmed in 1961:-

	<u>No. of Houses</u>
Hightown No.1 Clearance Area.....	130
Hightown No.2 Clearance Area.....	11
Lock Lane No.1 Clearance Area.....	2
Lock Lane No.2 Clearance Area.....	2

The following area which was originally reported in 1958, was confirmed in 1961:-

Town Centre No.3 Clearance Area.

The delay in this case was occasioned by the area being included in a Compulsory Purchase Order on which the Minister allowed the appeal of the owners that the land be not purchased. In giving this decision the Minister confirmed that the houses were unfit and if made the subject of a Clearance Order would be confirmed. Such an order was made in 1960, and confirmed in 1961.

Individual Houses

Demolitions

Reported on in 1959 Demolition Orders made 1960	
Demolished 1961.....	9

Closed 1961.....	1
Reported on in 1961 Closing Order 1961	
Closed 1962.....	1
Local Authority owned dwellings certified as unfit and closed in 1961.....	1

It has been my practice to show not only the years workings in this field, but also the progression through the Council's Slum Clearance Programme. I have formerly shown this by referring to the first five year programme and the second phase of the programme, but I feel that this can now be shown to advantage by reference back to the original Slum Clearance Programme laid down in 1954, which envisaged 15 years work in this field. My original report to the Committee in 1954, suggested that 9 large areas be dealt with together with 5 categories of individual unfit houses, plus a number of temporary dwellings. The total number of houses included in the report was 2,220, but mention was made of the Wheldon Road area as being in need of some action and in fact after later consideration some 455 houses in this area were added to the programme.

As work has proceeded it has been necessary to make minor adjustments in the number of houses in the original categories and this has resulted in a revised figure. In addition to all these, certain houses have come to light in the period since 1954, which required action and in all 57 houses have been reported upon to the Committee. I have therefore set out in Table I which is attached hereto, a summary of the original areas and categories and shows the number of houses which have been dealt with by our department either by way of Clearance Areas and subsequent

Clearance Orders, or Compulsory Purchase Orders, or by individual action for Demolition Orders or Closing Orders, up to the end of 1961.

In the table also are set out the programmes for the years 1962, 2, 4 and 5, which have already been decided upon by the Committee. However, when all these houses are taken away from the original figure there still remains a balance of 567 houses which are listed in the programme for consideration in the period 1966/70. The condition of this property will have to be considered some time before 1966, in order to decide what action is necessary and many of the houses will have to be brought forward in a further Slum Clearance Programme. However, among these houses are some which were included in the larger areas originally specified when it was envisaged that the whole of the area would be cleared, particularly where re-development of site was thought to be practicable. Thus, certain of the houses are likely to be found to be in a reasonable condition and not suffering from defects to a sufficient degree as to warrant their inclusion as unfit houses. In a number of other cases, particularly where the houses have been purchased and are owner/occupied considerable repair work has been carried out and it will only be by means of a further survey of these houses that an accurate assessment of their condition can be arrived at. Unfortunately, however, certain other properties which were not included in the report have suffered through lack of maintenance and it may be that although certain houses have to be excluded from the report, others will be found which will be in need of clearance action.

Table I shows the number of houses which have been dealt with by my department by way of report and confirmation of Orders. However, this work has been programmed well in advance of re-housing as is essential to maintain the flow of tenants to new houses as they are completed, and therefore I am including a further Table II covering the period 1954 to 1961 which shows the houses reported upon in each year, together with the year in which the tenants from those houses were re-housed and the actual dwellings demolished. This gives, therefore, a figure of the actual houses demolished or closed and the number of families re-housed from the areas.

It may on the surface appear that work in the Slum Clearance field is reducing, but this impression I feel, arises by the fact that by arranging to report on the slum clearance programme for the full year in the early months, and by concentrating all the areas which are being dealt with in one report, only one public enquiry is necessary, whereas in previous years the work was taken piecemeal and areas reported throughout the year which gave rise to many small orders and many public enquiries. This concentration of work has only been achieved by major efforts on the part of the whole of the staff in the later months of one year and the early months of the subsequent year, and has been so organised in order to enable both the Architects and Housing Manager's Departments to plan their work accordingly. Unfortunately as we progress through the programme the type of house being included in areas becomes better and thus the owners of the houses are becoming more likely to appeal against the Orders and certainly to make application for good maintenance payments. Thus, prior to the public enquiry, intensive work is necessary in preparing the case to meet these objections, and after the enquiry due to the many awards of well maintained payments now being made by the Minister, a large volume of work is entailed in checking the claims of owners and the counter-claims of tenants for their share of these payments. Details of the awards made for the year 1961 are given in the table below:-

Clearance Areas

No. of houses for which owners made claims.....	119
No. of Well Maintained Payments awarded in Clearance Areas..	45
Total amount of these claims.....	£1,712.

Individually Unfit Houses

No. of claims for Well Maintained Payments.....	1
Amount of Claim.....	£36.

Improvement of Houses

In 1961 applications were received for 119 Discretionary Grants in respect of improvements and one for the conversion of a house into two flats. All of these were approved, but subsequently one scheme was not proceeded with and the application withdrawn. In addition 33 applications for Standard Grant were received and 32 of these were approved whilst the other had to be refused as the works had been started prior to the application.

The number of these applications continue to rise year by year but it is to be regretted that full advantage is not being taken of the grants by owners of rented properties. It was hoped that the changes brought into force by the Housing Act 1961, which allow for an increase in rent of 12½% of the owners expenditure (as against 8% in previous Act) would result in a marked increase in applications from the owners of rented houses, but this has not yet been forthcoming. In the attached table figures are given of the number of applications dealt with over the past 8 years divided into those from owner occupiers and from other types of owners. The National Coal Board has taken full advantage of the grants and as can be seen from the details given, have been responsible for the majority of applications from owners of rented houses. Only 33 applications have been received and approved over 8 years from other owners and of these 13 have been withdrawn and the works not carried out on grounds that the permitted rent increase at that time would not reimburse the owner for this outlay.

The idea of the potential field for this work can be gained if the figures of the response to the grants are considered for a typical area of the town. The area bounded by Oxford Street, Beancroft Road, Long Acre, Ashton Road, over 2,000 houses the majority of which were built 50 - 70 years ago in long terraces and without modern amenities of bath, wash basin, water closet and hot water. In a few cases up to the end of the War some owner occupiers had fitted some or all of these amenities, but at the time of the introduction of these grants at least 75% (say 1,500) had none of them. In the last 8 years in this area only 226 applications have been received and a few of these have not been proceeded with.

This particular area is ideally suited for these improvements for even when no small room is available for conversion, adequate space in the rear yard is available for extensions. At the average rate over the past 8 years it would be another 40 years before all of these houses are improved, and surely our towns people cannot be left without these essential amenities for such a period.

I feel that the only answer to this problem is by the introduction of at least some measure of compulsion by the Government. My own Association have recommended such a course for many years and I would suggest that Councils be empowered to designate suitable areas as "improvement areas" and owners notified to that effect. If the response is not forthcoming legislation ought to be available similar to that under which we eliminated privy middens, in that notices could be served and if not complied with, the works could be done in default and half the costs recovered. As rent increases are allowable, even in cases where the owners have not the necessary capital sums, the costs could be spread out over a period similar to private street works costs. I feel also that the carrying out of such works in blocks of property would be more economical both in costs and in the use of the existing building force than the present system whereby builders are moving from one area to another and often different firms are working in adjacent houses.

The area I have specified is not the only one suitable for this work and I would estimate that from 3 - 4,000 houses are in need of improvement works.

In Table II details are given of works approved and carried out in 1961.

Houses in Multiple Occupation

As mentioned earlier in this report in the summary of new legislation the Housing Act 1961 gave powers for dealing with houses where separate rooms are let off to individuals or couples as separate units but where all or certain of the essential amenities are used in common.

During the year one house was brought to our notice in which front room, three bedrooms and attic were all occupied as units of accommodation and where the communal facilities left much to be desired. The house was overcrowded and the attic not suitable for occupation. Action is being taken to secure better facilities and the overcrowding has been reduced.

Housing Statistics

The following is a copy of the return of Housing Statistics as submitted to the Ministry:-

- (1) No. of dwelling houses in district..... 13,300
- (2) No. of houses included in above -
 - (a) Back to back..... 42
 - (b) Single back..... 18
- (3) Houses in Clearance Areas and Unfit Houses Elsewhere
No. of houses included in representations made during the year:-
 - (a) In Clearance Areas..... 145
 - (b) Individual Unfit Houses..... 18

A. Houses Demolished In Clearance Areas

Others	22	12	9	9	1

Key

Section 9 of the Housing Act, 1957, is used to require the thorough reconditioning of houses.

Section 39 of the Public Health Act, 1936, deals with such matters as blocked or defective drains, sink waste pipes etc.

Section 45 is used for water closets which are defective but which can be repaired without reconstruction.

Section 47 deals with the conversion of privies, waste water closets etc., to proper wash down water closets.

Section 75 enforces the provision of proper dustbins.

Section 92/3 deals with premises in such a state as to be prejudicial to health or a nuisance and are used for general repairs to houses.

INSPECTION AND SUPERVISION OF FOOD

This aspect of the work of the department is of paramount importance, although much of it takes place behind the scenes and only comes into prominence when failures to maintain proper standards of hygiene are found during inspections or give rise to complaints from the general public.

The duties cover the supervision of all foodstuffs during their production in factories, bakehouses, preparing premises and slaughterhouses; during distribution at wholesale premises, warehouses and on delivery vehicles and during retail sale and storage for sale at shops, stalls and mobile traders. A new field of this work was introduced during the past year when automatic vending machines were installed in the town for the sale of ice-cream. Although this is on a very small scale at the moment, I understand from colleagues that this type of machine is becoming extensively used for all sorts of food commodities, and their condition of cleanliness and hygiene will have to be watched in order to maintain proper standards.

Our work covers many processes and trades and a brief summary of the type of premises dealt with is given below:-

Food Factories

In this category we have two factories manufacturing sweets, one is mainly of the liquorice type commodity and the other is sugar boiling for the manufacture of boiled sweets. On the cereal side we have one large flour mill and three maltsters producing the raw material for beer and other liquors, two small factories prepare aerated mineral waters and a small factory installed a few years ago for the preparation of potato crisps and shell fish has been greatly extended. Other miscellaneous trades include two tripe dressers and one fat refiner who refines animal fats for sale to the fish friers of the district.

Food Preparation Premises

These include 21 bakehouses and 26 premises preparing sausages and potted, pressed, pickled or preserved foods. In addition we have one dairy which pasteurises milk and handles a large part of the milk supplied to the town.

Wholesale Premises

The town is well served by wholesale warehouses, there being three fish warehouses, one of which is a new building erected during the past year in place of small, poorly designed premises. Three wholesale green-grocers operate in the town and two of these have large banana ripening houses. A recent innovation in the town is the introduction of a wholesale grocery business which now meets many of the demands of the smaller retail shops for packaged goods.

Retail Premises

On this side there are 49 butchers shops, 27 confectioners, 10 retail fish mangers and 36 fried fish shops. Two multiple stores operate in the town and there are 148 grocers, many of which are now converting to self-service type of operation. There are 17 green-grocers retailing fruit and vegetables and 35 shops solely devoted to the sale of sweet confectionery together with tobacco etc. The town is served by 14 chemists and druggists and the catering side has 46 premises varying from restaurants, industrial and school canteens, down to small snack bars. In addition there are 85 licenced premises being either public houses, licenced clubs or off-licence shops. It is

pleasing to note that the sections of the housing estate at Ferry Fryston is now served by new shops of various categories. The plans and construction of these shops have been supervised and checked at all stages and the premises fully comply with the appropriate Regulations.

Mobile Shops

Many mobile vehicles are still in use throughout the town, supplying the needs of the areas more remote from the shopping centres. Fortunately by means of the West Riding County Council (General Powers) Act, we are able to keep track of these vehicles as they are required to be licensed. Details of the types of vehicles and commodities sold are given in the following tables:-

TRADE	From within the District		From outside Districts
	No. of persons registered	No. of premises registered	No. of persons registered
Ice Cream	2	2	5
Greengrocers	11	8	1
Grocers	12	9	3
Butchers	4	2	-
Confectioners	5	2	4
Fishmongers	3	4	1
Fried Fish & Chips	1	1	-
Eggs	1	1	-

Whilst the duties of inspection and supervision of the Town's food supplies are mainly of a routine nature, certain aspects may well call for some elaboration.

Food Premises

As I mentioned in my last report, our survey of all food premises has been completed and the occupiers of those premises made aware of the alterations necessary to make the premises fully comply with the 1960 Regulations. Our efforts in this field during the year have been mainly devoted to revisits in order to check the provision of the necessary washing facilities etc., and further check inspections to ensure that the food handlers were using the facilities provided.

I am pleased to be able to report that many of the occupiers of food premises have complied with the requirements although some delays have been experienced due to building contractors being unable, through pressure of work, to do the alterations immediately. In certain cases, however, some reluctance has been experienced and we have been frequently referred to the lack of some facilities in the food shops in the Market. It is therefore very welcome to note that loan sanction has been received in 1961 for the necessary alterations in the Market and the Borough Architect's staff had commenced work on these during that year and all will be completed in 1962.

I feel that when this has been achieved the department will be in a better position to press the recalcitrant traders for full compliance and if they still prove obstinate it will necessitate prosecutions under the appropriate Regulations.

During the year a particularly serious case of contravention of the Regulations was found and no attempt was made to remedy matters in spite of warnings. I therefore had to report on a cafe and snack bar in the town where the standard of hygiene was extremely poor. The Committee authorised prosecution in this case and at the local magistrates court the owner occupier of the premises was fined £32 plus £5.5s costs. In addition to the fine an application for the disbarment of the cafe premises was granted for a period of two years.

Two other cases of contravention of Food and Drugs Legislation arose, both being of the "foreign body in food" type. The first of these was the presence of a small piece of copper wire in a brown loaf. The wire appeared to be part of a copper pan scrubber and it was found that the premises had been in the hands of decorators during the period in question. In view of this explanation the Committee decided that a strong warning should be issued but no prosecution taken.

The second was a safety pin in a bread cake. Fortunately the pin was found to be closed and no injury was caused, but in view of the danger which might have resulted from this object the Committee authorised proceedings during which the suppliers pleaded guilty and expressed regret at the occurrence. The Magistrates imposed a fine of £2 with £3.6s. costs.

It is to be regretted that the numbers of such incidents appear to be on the increase and the majority of them seem to be due to carelessness during the preparation of the raw materials or during manufacture. Up to date manufacturers are introducing magnetic separators and other expensive equipment to try and eradicate these occurrences, but I feel the real answer is to instil a consciousness of food hygiene and good practices into all food handlers. How this can be achieved is difficult to forecast in that when evening classes in this subject were held a few years ago there was little support from the majority of shop keepers and food handlers. It may be that such classes would have more success if the food handler who completed the course was given some commensurate increase in remuneration.

As mentioned earlier in this report, many premises have been improved to comply with the Regulations. In some cases, however, the structure of the food premises was such that they could not be made to comply; in these cases the premises were either closed or ceased the sale or storage of food.

Figures of results achieved in this work are given in the following table:-

<u>Regulations</u>	<u>Requirements</u>	<u>No. of premises where works are completed.</u>
6	Construction and cleanliness of equipment.....	73
8	Protection of food from contamination.....	48
9	Cleanliness of Food Handlers and their clothing	18
14	Improvements to Sanitary Conveniences.....	122
16	Provision of wash basins with hot and cold water etc.....	96
17	Provision of first aid equipment.....	17
18	Provision of lockers for outdoor clothing.....	19
20	Improvements to lighting of food rooms.....	11
21	Ventilation of food rooms.....	1
22	Food rooms not to communicate with sleeping rooms.....	1
23	Cleanliness and repair of structure of food rooms	118
24	Accumulation of refuse etc., and improvements in refuse storage.....	

MEAT INSPECTION

The meat supplies to the town continue to be derived partly from animals killed within the slaughterhouses in the district and partly by purchase of carcasses from outside districts. The majority of butchers now purchase their meat "on the hoof" from wholesalers, although a few continue to buy live animals "on the hoof" and have these slaughtered either at public or private slaughterhouses.

The Council have continued to operate the Public Slaughterhouse in premises leased from the Co-operative Retail Services Ltd., and as mentioned in the Council's Slaughterhouse Report, these premises are inadequate in size and of such poor design and layout that the throughput is only maintained with great difficulty. However, every effort is made to achieve as high a standard of hygiene as possible.

In applying the appropriate Hygiene Regulations some apathy and even resistance was experienced from the Slaughtermen. In one case, despite numerous warnings, one man continued to contravene the Regulations. The matter was reported to Committee and proceedings authorised. The Magistrates imposed a fine of £10 and this has had a salutary effect on the men concerned.

The majority of animals dealt with are the property of a single wholesaler who supplies meat to many of the shops within the area and to many other shops in neighbouring and often distant districts. The general standard of animal killed is of high quality and this is reflected in the small incidence of disease found and the small amount of meat condemned which is shown in the tables later in this report. Once again in 1961 we experienced a very small percentage of animals affected with tuberculosis and this is a very heartening sign that this disease is becoming almost extinct in this country.

The three private slaughterhouses in the area are still used by a small number of butchers but the number of animals killed at two of these which are to be closed on or before the Appointed Date of 1st January 1964, reveals a gradual diminution and it is anticipated that they may be disused before that date.

Meat inspection of all animals is carried out on the day of killing but this is only achieved by the staff of inspectors working late on some evenings and also at the week-end. The following reveal the large amount of work entailed in ensuring that a safe meat supply is ensured from the slaughterhouses within the Borough:-

Animals Slaughtered in 1961

	Cattle Excluding Cows	Cows	Calves	Sheep and Lambs	Pigs
No. killed	3,845	1,756	226	19,354	3,635
No. inspected	3,845	1,756	226	19,354	3,635

The incidence of animal tuberculosis is particularly worthy of consideration and figures for the past twelve years are given in the following table. A general downward trend can be seen, although with some fluctuation in the figure for cows:-

Percentage of Animals Affected with T.B. 1950-1961

YEAR	Cattle excluding Cows	Cows	Calves	Sheep	Pigs
1950	9.25	49.12	0.59	-	8.75
1951	9.94	46.7	2.8	-	5.1
1952	14.08	40.55	0.23	-	5.42

1960	0.05	3.09	-	0.007	0.51
1961	-	0.23	-	-	0.49

Public Slaughterhouse

In addition to meat inspection duties the management of the Public Slaughterhouse is vested in my department. It is gratifying to note from the following tables that the Public Slaughterhouse has not only covered its expenses during the financial year 1961/62 but has in fact made a profit of £553.

Some difficulties have been experienced in maintaining a suitable staff of yardmen for cleansing the premises as the work involved is of an unpleasant nature and involves the working of long hours and over the week-ends.

In the Treasurer's Abstract of Accounts for the Financial Year ending 31st March 1962, the Slaughter Account is as follows:-

<u>Expenditure</u>	<u>£</u>	<u>Income</u>	<u>£</u>
Wages.....	1,602	Tolls.....	3,771
Repairs and alterations	168	Insurance Claim.....	7
Gas and Electricity....	345

MILK SUPPLIES

The pattern of our milk supplies shows little if any change from last year. All the milk sold in the town is designated milk and must therefore comply with the required tests. In only one case is raw milk sold by a retailer to the general public and that is from a Tuberculin Tested Herd at a farm just outside our boundaries. All other milk is heat treated either by Pasteurisation or by Sterilisation.

The majority of the pasteurised milk sold, comes from the local dairy of the Co-operative Retail Services where both Tuberculin Tested and undesignated milk is treated in their modern H.T.S.T. plant. Recent improvements at this plant include a new vacuum bottle filler which has both speeded up the plant and also improved hygienic conditions. Milk processed at the plant is retailed on the Society's own vehicles and also sold wholesale to private roundsmen or to retail shopkeepers. A number of other roundsmen are supplied by Express Dairies Ltd., with T.T. (Pasteurised), Pasteurised and Sterilised Milks and the bulk of this milk is dropped daily at a local depot where the milk is refrigerated pending collection by roundsmen. There are still many retail shops selling Sterilised milk which is delivered to them periodically by various firms from outside our area.

Regular sampling of milk is carried out by the Department to ensure purity and quality of our supplies. This sampling covers all aspects and stages of production and supply and includes the testing of raw milk supplies to our local dairy for bacterial purity, freedom from Tuberculosis and Brucella Abortus and also for chemical quality of the fat content etc. Regular samples of milk are taken after processing to ensure proper operation of the pasteurising plant and also samples are taken of milk being delivered by the various roundsmen and also at retail shops.

Whilst dealing with our milk supplies and all the safeguards that surround it, I feel I must once again refer to the milk container. In former years I have referred very strongly to the mal-treatment of milk bottles by milk consumers. We have unfortunately seen the widespread mis-use and mis-handling of returnable bottles and fully appreciate the difficulties that must arise when these bottles reach the washing plant; we are also aware of the apathy and indifference of the consumer, which goes beyond failure to clean after use, but even extends to complete failure to return and with no regard to the inconvenience and cost to the producer. On the grounds of hygiene alone I have urged the general use of a dispensable carton and it would seem from the position which arose in the latter part of the year that the economics of the trade were becoming so seriously affected as to call for re-organisation of sales. We learned that producers proposed to discontinue the sale of milk in half pint bottles and our enquiries were met with the blunt statement that the loss of half pint bottles was far greater than the loss of pint bottles and as the cost was very little lower it was not economical to continue them in use. The actual losses were attributed not only to indifference but to wilful wastage, particularly in the summer season when it was believed that picnickers taking a half pint for the day's use, quite deliberately discarding the bottle rather than be troubled with its return. This was indeed a most serious position and after strong representation had been made we learned that a limited supply of half pints would be available in the summer months of 1962, for purchase by old age pensioners, but in this instance the container would be a non-returnable carton. Unfortunately the change in container meant quite a high increase in the price of milk and it is feared that the people for whom it was actually designed, would not be able to take advantage. I

would repeat that in the light of experience, surely the time has arrived when milk can be issued in some form of container which, after use can be consigned to the refuse bin.

It is of interest to note that 1961 was the fourth successive year during which no sample of milk was found to be positive to the test for Tuberculosis.

The following tables give a summary of this section of our work:-

Registration of Producers, Distributors and Dairies.

No. of Producers of pasteurised milk.....	1
No. of inspections of pasteurising plant.....	54

Distribution

No. of Distributors on register.....	122
No. selling Tuberculin Tested raw milk.....	1
No. selling Pasteurised Milk.....	22
No. selling T.T. Pasteurised Milk.....	18
No. selling Sterilised Milk.....	95

Sampling of Milk for Bacteriological Examination

Raw Milk

No. of samples submitted to Methylene Blue Test.	51
No. of samples which satisfied Methylene Blue Test	41
No. of samples which did not satisfy the above test	9
No. of samples void (bottle broken).....	1

Tuberculin Tested Milk

No. of samples submitted for the prescribed test	136
No. of samples which satisfied Methylene Blue test	118
No. of samples which did not satisfy the above test	18

Pasteurised Milk

No. of samples submitted to prescribed test.....	44
No. of samples satisfying Methylene Blue Test...	43

Milk - Biological Examination for Tuberculosis

No. of samples submitted for above test.....	226
No. of samples giving negative result.....	217
No. of samples giving positive result.....	Nil
No. of void samples.....	9

Milk - Chemical Analysis

No. of samples taken - Informal.....	131
Formal.....	39
No. of samples adulterated - Informal.....	15
Formal.....	18

ICE CREAM

This commodity is becoming increasingly popular and is sold either pre-packaged from the majority of small retail shops in the town or as loose or pre-packed ice-cream from vendors vans which are touring the district in ever increasing numbers. Most of the ice-cream is produced by large concerns situated outside the district and sold under branded names, but there is still one ice-cream producer in the town who prepares "cold mix" loose ice-cream at his premises and retails this from his own van.

All premises used for the production, storage and sale of ice-cream are registered under the Food and Drugs Act and all vendors vans are registered as Hawkers of Food under the W.R.C.C. (General Powers) Act.

Sampling was carried out during the year and results show that a high standard of purity and quality is being maintained.

Details of work under this heading are summarised below:-

No. of premises registered for sale during 1961.... 4

Position as at end of 1961

No. of premises registered for manufacture of ice-cream..... 4

No. of premises registered for sale of ice-cream... 118

Bacteriological Sampling

No. of Samples taken..... 15

No. classified in Grade I..... 14

Grade II..... 1

Grade III..... -

Grade IV..... -

Chemical Sampling

No. of Samples taken..... 6

No. of samples satisfying required standard..... 6

FISH

The supply of wet fish to the Town continued as in previous years. The main bulk of this fish is handled by three wholesalers, and during the year one of these was obliged to move from his existing premises due to expiry of his lease. New premises were erected in the Whitwood Mere Area and the Department was consulted during planning and construction and the new building complies fully with the appropriate Regulations. One of the other wholesalers also improved his premises by provision of additional cold storage. The wholesalers not only supply wet fish to the retail fish shops, but also deal with large quantities of filleted fish for the numerous fish fryers in the town. Smoked fish and shellfish are also prepared and sold to the retail trade.

All the premises are of good construction and a high standard of cleanliness is maintained.

The retail shops selling wet fish are all fitted with refrigerated display cabinets and in addition, together with the fried fish shops, have storage refrigeration which is so necessary to maintain this perishable commodity in good condition.

It is interesting to note a new aspect of fish supplies. This is provided by the quick frozen pre-packed fish sold either in "fingers" or in fillets. There appears to be no doubt that provided the fish is of good quality when frozen and the low temperature is maintained during storage and transit, this method is a very hygienic and convenient way of supplying the housewife.

OTHER FOODS

Unsound Food

During the distribution, storage and sale of foodstuffs there is bound to be some spoilage or damage. The department has built up over the years excellent co-operation with the traders in the town, and the damaged or unsound foods are surrendered for destruction and the traders are issued with a Certificate of Condemnation. During the year the following foodstuffs were dealt with in this way:-

Condemned Food

322 lbs. Cooked Ham.	36 lbs. Corned Mutton.
102 lbs. Chopped Pork.	2 tins Chicken.
55 lbs. Corned Beef.	13 lbs. Beef.
8 tins Sausages.	15 lbs. Tinned Steak .
20 Cartons Apples.	36 lbs. Tinned Tongue.
20 lbs. Cheese.	6 lbs. Veal.
67 tins Fruit.	25 tins Peas.
10 tins Evaporated Milk.	19 tins Tomatoes.
3 tins Carrots.	6 tins Beans.
3 tins Rice Pudding.	2 tins Sage Pudding.
10 tins Soup.	1 tin Shrimps.
8 tins Fish.	

SAMPLING

Sampling of other foods for chemical analysis was also undertaken under the provisions of the Food and Drugs Act, and the following is a summary of all samples taken:-

	No. of samples taken.		No. of samples adulterated	
	Formal	Informal	Formal	Informal
Milk	39	131	18	15
Potted Beef Paste	2	-	-	-
Pork Sausage	4	-	-	-
Beef Sausage	2	-	-	-
Self Raising Flour	1	-	-	-
Ice-Cream	-	6	-	-
Fish Cakes	3	-	-	-
Chocolate Coconut Mix.	1	-	-	-
Cracker Barrel Cheese.	1	-	-	-
Margarine	1	-	-	-
Sugar	1	-	-	-
Butter	1	-	-	-
Polony	1	-	-	-
TOTALS	57	137	18	15

Details of the samples reported as adulterated, together with action taken, is summarised below:-

Date of Sample.	Sample No.	Commodity	Analysis	Remarks
<u>FARM 'A'</u>				
13.3.61	437C	Milk	Fat 2.35	Informal
21.3.61	453	Milk	Fat 2.84	Formal samples
	454	Milk	Fat 2.55	Check on above
	456	Milk	Fat 2.50	4 other genuine
	460	Milk	Fat 2.42	Average - 2.88% Fat
22.3.61	462	Milk	Fat 2.64	Evening Milk
	463	Milk	Fat 2.27	
23.3.61	466	Milk	Fat 2.42	Appeal to cow)
	467	Milk	Fat 2.78	samples
	468	Milk	Fat 2.43	} Morning Milk
	469	Milk	Fat 2.85	
	470	Milk	Fat 2.39	2 others gave results over 3% - average for 9 churns 2.68%.
<u>FARM 'B'</u>				
7. 3.61	426A	Milk	Fat 2.77	Informal (1 churn)
13.3.61	434C	Milk	Fat 2.55)	Informal check on
	435A	Milk	Fat 2.77)	whole consignment
	435C	Milk	Fat 2.81)	6 other samples
	436A	Milk	Fat 2.97)	genuine average 3.35% fat.
21.3.61	445	Milk	Fat 2.79)	Formal check on
	446	Milk	Fat 2.84)	6 other samples
	447	Milk	Fat 2.89)	genuine
	450	Milk	Fat 2.73)	Average 3.23% fat.
<u>FARM 'C'</u>				
7.3.61	431C	Milk	Solids not fat 8.02	Informal
13.3.61	433	Milk	Solids not fat 8.28	Formal check on above
<u>FARM 'D'</u>				
13.3.61	439A	Milk	Fat 2.85	Informal
21.3.61	451	Milk	Fat 2.80	Formal check on above
				1 other sample genuine average 2.96% fat
<u>FARM 'E'</u>				
25.7.61	503C	Milk	Fat 2.55	Informal
				Formal check genuine
<u>FARM 'F'</u>				
25.7.61	506A	Milk	Fat 2.75	Informal (1 churn)
1.8.61	512A	Milk	Fat 2.60	Informal check on whole consignment.
				4 other samples genuine average 3.26% fat
<u>FARM 'G'</u>				
25.7.61	508A	Milk	Fat 2.65	Informal (1 churn)
1.8.61	515A	Milk	Fat 2.55)	Informal check on
	515B	Milk	Fat 2.78)	whole consignment
	515C	Milk	Fat 2.80)	5 other samples genuine
				Average 3.04%

Subsequent action on these samples was as follows:-

FARM 'A'

The farmer was informed and the advice sought of the Milk Advisory Officers of the Ministry of Agriculture. These officers advised the farmer on improved feeding methods and later samples showed considerable improvement in yield of fat.

FARM 'B'

The main fault here appeared to be unequal milking periods and again the Milk Advisory Officers were called in and improvements achieved.

FARM 'C'

Although the solids not fat content was below the prescribed limit the Analyst reported that the Freezing Point test showed that no added water was present. A visit to the farm revealed that only two very poor quality cows were being milked and the farmer undertook to cease sending milk into the dairy until his herd was improved.

FARM 'D'

As the average over the whole consignment was only just below 3% the Milk Advisory Officers were again called in and later samples proved genuine.

FARM 'E'

All the eight samples taken as a check on the unsatisfactory informal sample, proved genuine, and therefore no further action could be taken.

FARM 'F'

The average over five samples was well above 3% and so no further action could be taken.

FARM 'G'

The average over eight samples showed 3.06%, but when further check samples were to be taken it was found that this milk had been diverted from the local dairy. Samples were taken in September, however, and all these proved genuine.

BACTERIOLOGICAL SAMPLING OF OTHER FOODS

During the year it came to my notice that in a number of areas throughout the country, samples of sweets containing coconut had been found to contain salmonella type of food poisoning organisms due no doubt to contamination in country of origin. As coconut is used in local sweet factories, bakehouses etc., it was decided to take check samples of this commodity and these were submitted to the Public Health Laboratory. In all fifteen samples were taken from various stages of manufacture and also from retail shops selling goods made outside the area. I am happy to say that all these samples proved satisfactory and no organisms were found.

Further work in this field occurred when chickens at a local farm were found to be secreting salmonella organisms in their excreta - samples of eggs were taken to ensure that no contamination was present and egg deliveries held pending the results. Once again no organisms were found and the infection was cleared up by treatment of the infected birds.

WATER SUPPLY

The town's supply during the year was entirely derived from the Wakefield Corporation water undertaking. The water was satisfactory in quality and quantity. During 1961 the last of the temporary dwellings at Carr Wood were demolished and as these were the only houses served by a standpipes, it can now be said that all houses have a piped supply of mains water laid on to taps inside the dwellings.

Regular samples of water were taken for Bacteriological examination both from service reservoirs and taps at various parts of the district. Details of these samples are given below:-

No. of samples taken from reservoirs.....	87
No. of samples showing coliform organisms.....	1
No. of samples taken from taps.....	149
No. of samples showing coliform organisms.....	1

PUBLIC BATHS

The Public Baths in Florence Street still remain the sole swimming facilities in the district. Throughout the season the baths are well used and in warm weather tended to become inundated with bathers. In spite of this heavy use the purity of the water was maintained at a high level by the chlorination plant. Regular sampling of the water was carried out for bacteriological examination and all the samples showed no coliform organisms. Three, however, did give positive result to the plate count test but as this is an extremely severe test the small numbers of colonies found in these three samples are negligible. Monthly sampling of the water was also undertaken for chemical analysis and the chlorides once again showed a build up over the season but did not reach a critical level.

The pool was maintained at all times in excellent condition and the Baths Superintendent and his staff merit congratulations on the good results of their work.

Details of samples taken are as follows:-

Pool Water Sampling

Bacteriological Examination

No. of samples taken.....	20
No. of samples showing coliform bacilli.....	Nil
No. of samples showing colonies to plate count test.....	3

Both Water - Chemical Analysis

Date of Sample	Total Solids	Parts per Million			Oxygen Absorbed

ATMOSPHERIC POLLUTION

In previous reports I have referred to the growing importance of the Clean Air Act and would make no apology for once again stressing the urgency of this aspect of our work. Each year more and more discussion takes place, the findings of research are revealed and it becomes much more apparent that the pollution of the atmosphere seriously prejudices the health of the people. Of recent years progress has been made, but that progress has neither been rapid enough nor great enough, and today air pollution must be considered to be one of our greatest national health problems. In any industrial area the problem must be particularly severe and the severity is only added to when the principle industry of the district is that of coal mining. In former years I have discussed the industry and the domestic aspects and I would again consider them under these two headings.

Industry

I have previously referred to the progress made in the post-war years in the field of industry, and 1961 again offers interesting consideration. During the year the electrification of the winding gear at the Fryston Colliery completed the programme of reorganisation at our local collieries. Only at Glasshoughton is the winding carried out by steam, but here the boiler plant has high efficiency and gives no smoke problem whatsoever. At the Whitwood, Wheldale, and Fryston Collieries, boiler plant is now used only for space heating, bathing facilities etc., and the smoke problem is therefore reduced to a minimum. The National Coal Board has, however, a further interest in the district, namely that of the Coke Oven Plant at Glasshoughton. I have referred to the re-organisation that has taken place there and how the results have not been all that the general public would wish. The plant of course comes within the jurisdiction of the Alkali Inspector who has taken a deep interest in the operations of the new plant and once again close liaison has been maintained by your Public Health Officer with the Inspector. The particular responsibility of the local authority is, however, the steam raising plant, and in my last report I referred to the lack of progress being made in dealing with this; it is regrettable to have to report that the scheme approved in 1959, which remained a paper scheme for so long, has now been consigned to the file for those schemes that never were. It is particularly regrettable in that the existing plant which so blatantly contravenes the dark smoke regulations, is something of a cross between a "Museum" and "Heath Robinson". In 1960 after conference with the Coal Board officials, changes were made in the fuel to be used, but during 1961 this usage produced serious complaint from the adjoining residents, which, when investigated, revealed a large amount of dust being deposited on their homes and gardens. A temporary baffle was provided in the chimney flues and a further change of fuel took place; as a result the dust nuisance was reduced but the smoke nuisance increased. It is deplorable to have to accept such a state

of affairs six years after the passing of the Clean Air Act, and I can only reiterate the feeling of deep dissatisfaction expressed in my last report. Great tolerance and understanding has been shown by the Council in this matter, but it would seem that this has failed to produce any sense of urgency in the hearts of those who are actually responsible for the worst offender of our district.

As against this sorry picture it is pleasing to report progress in other industries. I reported last year that a scheme had been approved for a water tube burner burning a pulverised fuel; this plant came into operation during the year and not surprisingly, being a new order, has given teething troubles; the matter has been dealt with energetically, but at the year end the particular problems had not been completely resolved. The coming into being of the boiler did, however, ease the steam problem at the particular works which in turn secured improvement in the chimney emissions from the existing boiler plant. As this is an extending industry it is particularly important that satisfactory steam raising plant is not only available, but in step with steam demands, and this particular aspect does call for close study.

At one of our other industries the method of steam raising was not satisfactory in the light of the Regulations, and at the year end arrangements were in hand for a change in the method of stoking.

The smoke problem of a further industry resolved itself in an unfortunate manner when the premises, a pottery, ceased production. With the closing down went not only a hand-fired boiler of some age, but two hand fired kilns left from a previous generation. Whilst one is always pleased to see the abolition of smoke, one is unhappy to see it produced by the closure of works.

At our remaining industries problems do from time to time arise and discussions were held with management and it would seem that changes of method will come into being at several places, but I am bound to refer to one of our industries which still calls for particular attention, namely that of brick making. Whilst the emissions do not seriously contravene requirements, there are times when hand firing produces more smoke than is either desirable or permissible, and these works are receiving our consideration.

In the field of commerce it is surprising to encounter contraventions of the Clean Air Act, but during the year it was noted that a number of fried fish shops in the district still use coal as their heating medium and although operating in virtually domestic flues, do emit considerable quantities of dark smoke during the hours of trade. These have again called for our attention.

Pollution is not limited to coal smoke, but those industries which tend to give off pollutants of a chemical nature are of course under the control of the Alkali Inspector. During the year complaint was received at local level and was transmitted quickly to the district inspector who very promptly dealt with the matters in question. This close liaison which has now existed for several years, is, I am sure, the best method of dealing with local problems of this nature, and it is very gratifying to be able to report a very happy liaison between your health officer and the Alkali Inspectorate.

Domestic

1961 has been a year of contemplation than of action. Your Council having fully appreciated the gravity of the problem of concessionary coal, has never felt free to consider the making of smoke control areas. It has been known for some time that negotiations were in progress between the National Coal Board and the National Union of Mine Workers on the question of supplies, to those who were affected by the making of smoke control orders, and towards the year end hopes were roused that a solution was imminent. The clarification of this position will, of course, provide the opportunity for considering smoke control areas. I realise, however, that there are many who still need to be convinced of the need for this, that there are many more who even if accepting the argument are unwilling to sacrifice their coal fire, but the fact remains that domestic chimneys must now be responsible for somewhere between 60 and 75% of our smoke pollution. During the year I made some very interesting spot checks on domestic chimneys using the micro-Ringleman chart and found the results rather surprising. In many parts of the town during the Autumn, Winter and Spring months, it was easily possible to find house chimneys emitting smoke of a density of Ringleman 2 or even 3, and in an area devoted to dwellings used by Coal Board employees, dark smoke emissions occurred at a large proportion of the houses, the effects in the area being visible to the naked eye. Here clearly is the case for smoke control areas.

Administration and Propaganda

During the year interest was maintained in research and propaganda. Of the four soot gauges, two were re-sited to study the particular problems of two areas, in one instance with great success and in the other to a lesser degree. It is interesting to once again make comparisons with former years.

Your Council continued its membership with the West Riding Clean Air Advisory Council where once again your official had the honour to be Chairman, and the National Society for Clean Air where your official served as Deputy Chairman of the Yorkshire Divisional Council and as one of its representatives on the National Executive.

ANNUAL SOOTFALL IN TONS PER SQUARE MILE FROM 1926 TO 1961 ON THE CENTRE OF CASTLETORD
 1926 - 1943 SITUATED AT CAMBRIDGE STREET, CASTLETORD
 1944 ONWARDS SITUATED AT CARLTON STREET, CASTLETORD

RADIO-ACTIVE FALLOUT

This subject came to prominence during 1961 when the Russian Nuclear tests resulted in a marked increase in the Radio active Iodine and Strontium. About this time courses on the subject were organised at the Bradford Technological College and opportunity was afforded for the inspectorial staff to attend. The courses were very instructive and I feel it is essential to keep abreast of new problems which arise in the public health field.

Arrangements were made along with Dr. Paterson and the Public Analyst, for samples of milk and water to be tested for Radio-activity, but no dangerous levels of emission were reported.

DRAINAGE, SEWERAGE AND SANITARY ALTERATIONS

During the year the new main sewer from Half Acres and Love Lane was completed and this should now adequately cope with new development in those areas. Other works of sewerage were mainly confined to sewers in new housing schemes. However, during the year some progress was made towards the provision of sewers for the Hillcrest Area now served by cesspools. Arrangements were agreed with the private developer who is building on the land between the Ferry Fryston Housing Scheme and the old Hillcrest Area, that the sewers to be provided to the new development should be of such size and depth as to be capable of extension to connect up the Hillcrest Area. In a smaller way two single plot developers in the Brocchill Area were approached and it is hoped that agreement may be reached on similar lines. It may therefore be hoped that if these schemes come to fruition, some positive action can be carried out to do away with at least some of the cesspools in the district.

With regard to sanitary alterations, a small number of waste water slop closets were converted to water closets. The numbers of this and other unsatisfactory types of toilets is now very small and all are confined to areas scheduled for early action in the Slum Clearance Programme.

Details of the alterations to Sanitary Conveniences carried out during the year are given below:-

Slop Closets converted to water closets.....	3
Pail closets abolished.....	1
Water closets abolished.....	98
Additional water closets provided to existing buildings.....	111
Water closets provided to new buildings.....	197
Ashbins abolished.....	78
Ashbins provided to new buildings.....	192
No. of houses on cesspools diverted to sewer..	Nil

FACTORIES ACT, 1961

As in former years routine inspections of factories were carried out. Our duties cover the cleanliness, overcrowding, temperature, ventilation, lighting and drainage of floors in non-mechanical factories and the provision of sanitary conveniences and their maintenance and cleanliness, in both mechanical and non-mechanical factories.

The following is a copy of the Annual Return submitted to the Ministry of Labour under this heading:-

Premises	No. on Register	No. of Inspections	Notices served
Factories without mechanical power.	15	4	0
Factories with mechanical power.	134	500	9
Other premises	Nil	0	0

Sanitary Conveniences -
(a) Insufficient. (b) Unsuitable or defective

Found	Remedied	Referred to H.M.I.	by H.M.I.	No. of cases in which prosecutions were instituted.
(a) 9	11	0	2	0
(b) 1	1	-	-	-

PART VIII OF THE ACT

Outwork

(Sections 110 and 111)

Nature of Work	No. of out-workers in August list required by Sec. 110(1)(c)	No. of cases of default in sending lists to the Council	No. of prosecutions for failure to supply lists	No. of instances of work in unwholesome premises	Notices Served	Prosecutions
(1)	(2)	(3)	(4)	(5)	(6)	(7)
(Wearing apparel) Making Cleansing and Washing.	27	-	-	-	-	-

THEATRES AND CINEMAS

There are three cinemas still open for public entertainment. These are inspected from time to time in order to ensure a satisfactory standard and no problems have arisen during 1961.

COMMON LODGING HOUSES

The two premises used for this purpose remain in being and are registered under the Public Health Act. The standards of cleanliness and management are good and they serve a useful purpose in providing clean but cheap accommodation for a number of single and usually aging persons.

TESTS, VANS AND SHEDS

During the year one contravention of the Caravan Act was noted and proceedings instituted. The defendant pleaded 'guilty' but the Magistrates would not in the circumstances impose any fine. Costs, however, were levied against the person and the caravan was removed.

A number of other occasions arose when caravans were sited by itinerant hawkers but these were quickly moved on with the co-operation of the Police.

Some sites in the town are still used as winter quarters by travelling showmen who are exempt from the Caravan Act. These sites however are usually well maintained and no problems were encountered during the year.

RATS AND MICE DESTRUCTION

During the year the usual system of rodent control was maintained although difficulties due to shortage of operatives were experienced about the middle of the year. These problems were, however, overcome and the full complement of two rat catchers achieved. These men carry out investigation of complaints, routine survey and inspection of premises and treatment of infestations found using the recommended methods of the Ministry of Agriculture.

The Council continues its membership of the Local Advisory Group and your officers attend the meetings which are held quarterly and at which new methods of treatment and other problems are discussed.

The following extract from the Annual Return to the Ministry gives details of works carried out under this heading:-

Property	Rats		Mice	TOTAL
	Major	Minor		
Corporation property	-	19	1	20
Dwelling houses	-	221	17	238
Business premises	-	70	9	79
Agricultural property	-	2	-	2

No. of treatments:-

Corporation property.....	102
Dwelling Houses.....	323
Business Premises.....	98
Farms.....	4
	<u>527</u>

	No. of Properties.	No. of Inspections
Corporation Property	38	298
Dwelling Houses	13,300	5,778
Business Premises	1,223	1,856
Farms	14,573	7,954

STORAGE OF PETROLEUM SPIRIT

The licensing and supervision of premises where petrol and other similar products are stored is carried out by me department. New installations are checked both during planning and construction and existing premises visited to ensure compliance with the Home Office Code of Conditions.

The up to date position regarding the storage of petroleum spirits, petroleum mixtures etc., is as follows:-

Number of premises where petrol is stored in underground tanks.....	45
Number of tanks used.....	80
Total capacity of tanks.....	94,700 gallons petrol.
Number of bulk surface installations.....	2
Number of tanks involved.....	9
Total capacity of tanks.....	99,000 gallons Hydro Carbons.
Number of surface stores for cans etc.	8
Total storage capacity.....	340 gallons petrol. 400 gallons lamp spirit.

MARINE STORE DEALERS

Nine premises are registered for this particular trade and as in former years several police officers are authorised to act as officers under this Section, in addition to the staff of the department.

OFFICES

It was hoped that with the passing of the Offices Act that Regulations would be made giving powers of control of offices etc., Unfortunately no such Regulations have been issued.

However, during the year the British Lighting Council organised an exhibition on office lighting which demonstrated modern methods of achieving adequate lighting without glare as it is anticipated that this is one point which will be covered in any legislation affecting offices.

Opportunity was afforded your officers to visit the exhibition and all the technical staff of my department did so and thus received an insight into what will almost certainly be a problem of the near future.

OFFENSIVE TRADES

These still comprise one gut scraper, two tripe boilers, one fat melter and two rags and bones dealers. The premises of one tripe boiler have somewhat deteriorated and the necessary works have been pointed out. The person in question is hoping to find alternative premises of an improved standard.

PET ANIMALS ACT, 1951

Three premises are still registered under the Act and are well maintained.

HAIRDRESSERS AND BARBERS

The powers of registration granted by the West Riding County Council (General Powers) Act, 1951, are still applied. During the year three new premises were registered and one closed, leaving 52 premises in operation.

RAG, FLOCK AND OTHER FILLING MATERIALS ACT, 1951

One premises used for the making of upholstered furniture operates and is registered under the Act.

NATIONAL ASSISTANCE ACT, SECTION 50

I continue to be the authorised officer of the local authority for this section of the Act.

MORTUARIES

In previous reports the need for a new Mortuary has always been stressed and in my last report I referred to the investigations of the Health Committee. During the year a scheme was agreed and submitted to the Ministry for loan sanction.

At the time of writing this report work is well in hand and it is hoped that the new Mortuary will be in existence at the year end. In the meantime we continue to use the two Mortuaries at Cinder Lane and Glasshoughton every endeavour being made to maintain them at the best possible standard having regard to their restricted facilities.

SUMMARY OF SANITARY DEFECTS AND NUISANCES FOUND

	<u>Informal Action</u>	<u>Formal Action</u>
Nuisances found in 1961.....	328	83
Nuisances left over from 1960.	72	38
Total requiring abatement.....	400	121
Abated during 1961.....	358	93
Outstanding at end of 1961....	42	28

PUBLIC CLEANSING

As in former years this section of the report and the figures included in it cover the financial year ending 31st March 1962. The report covers refuse collection and disposal, street cleansing and public conveniences.

Refuse Collection

In my last report I recorded that in March 1961 there came into operation a bonus scheme based on the number of bins collected; the year under review therefore covers the first full year of this venture. As bonus payments began to relate to work output it was first of all found that teams were covering their area in ever reducing time periods, consequently a reorganisation of working areas became imperative. This obviously had to be a matter of trial and error and the experiments lasted until well into the Autumn leaving the heavy Winter months clear of upset. It was however found during this period that certain factors calls for further examination, particularly to determine what was the most suitable number of men to a crew, consequently even after the end of the financial year some further reorganisation took place.

In the Autumn of 1961, the changes had reduced the operating staff by 8 and the vehicles in use by 2, and for the remainder of the year work was carried out by teams using 2 Dennis Paxit Rear Loaders, 1 Dennis Sheflex Fore and Aft Rear Loader, 1 Karrier CK3 Side Loader and 1 Karrier Game Cock Side Loader, together with 1 Fordson with special body used solely on shop and commercial premises. It is interesting to record also that during the year one notices a major change in the physical nature of our household refuse. Over the years mine-workers have been supplied with concessionary fuel as part of their wages and this has generally been unscreened, of very variable character and always prone to produce a considerable weight of waste. In the past we have noticed that a load of coal delivered to a mine-workers home could result in an immediate deposit of half to one cwt and sometimes more of unburnable shale, whilst the burning of the load produced each week a heavy ash and slate deposit; this naturally caused us to have refuse heavy in bulk and heavy by weight, which particularly added to our Winter worries. During the year it was noted that mine-workers were no longer receiving unscreened coal but washed coals either "doubles" or "trebles", this virtually eliminated the initial deposit and considerably reduced weekly ash content of the bin, particularly when burned in the modern type of appliance. We have therefore found some easement in the amount and weight of refuse to be collected.

The Bonus Scheme was originally introduced to help stabilize staff in the department, to ensure regular weekly collection and to assist the economics of the work. I have referred to the physical side and results and I would draw comparison between the cost of 1961/62 and 1960/61.

In 1960/61 the next cost of collection amounted to	£29,448.
In 1961/62 it rose to.....	£30,206.
Wages in 1960/61 were	£17,485.
Wages in 1961/62 were.....	£18,786.
Transport in 1960/61 was.....	£12,004.
Transport in 1961/62 was.....	£11,551.

At first viewing it does not seem that a saving was made except in transport, but it must be borne in mind that as from the first pay week of the financial year the wage rates were increased by 3 $\frac{1}{2}$ d. per hour per man (nearly 8%) with consequent increase in the cost of transport. With these figures revealed the position shows a more positive saving. Our investigation and reorganisation was not limited solely to actual Refuse Collection but to the service generally, and as a result our disposal costs were reduced in the gross which, with increased income had material effect on the net cost and ultimately the position was that the comparative figures of refuse collection and disposal are as follows:-

Net cost 1960/61.....	£33,348.
Net cost 1961/62.....	£32,629. (despite absorbing the wages increase).

It would seem that the year's operations were well worth-while.

Disposal - Tips

Throughout the year tipping continued at Water Lane and Three Lane Ends. The work was routine in that top soil was stripped by the Bray Loader and stock piled, daily tipplings were covered by sub-soil and when convenient the area was recovered, the tip surface was given a layer of top soil. Throughout the year we were constantly reminded of the value of mechanical earth moving equipment and although wear and tear is particularly hard, and maintenance costs not light, results are secured which could not be secured without the use of such plant, such results being

prominent in the field of hygienic disposal. In past years we have been fortunate to be generally tipping below ground level in dis-used quarries, but as we are now tipping entirely above ground and as modern demands for better hygiene are ever increasing, we must be every mindful of the needs and act accordingly.

Destructor

Throughout the year we continued to burn a certain amount of material in the make-shift cell at Cinder Lane. I have previously referred to its primitive nature and I look forward to the day when proper apparatus will be available.

The following statistics will be found of interest:-

Collection

Refuse collected during the year was as follows:-

	<u>Tons.</u>	<u>Cwts.</u>
Ashbins (estimated weight).....	18,857.	3.
Ashpits (estimated weight).....	100.	5.
Shop Refuse and Salvage.....	334.	14.
TOTAL.....	19,292.	2.

The net cost of this service was £30,206.

In addition the department removed 215 tons 6 cwts. of refuse from the Market premises, the cost of which was borne by the Market Committee.

As in previous years tradespeople and others conveyed material to the destructor and to the tips.

The emptying of cesspools was carried out as required and it is estimated that 3,398 tons of sewage was so removed at a cost of £1,113.

Tips

Material disposed of at the tips was as follows:-

	<u>Tons.</u>	<u>Cwts.</u>
Ashbins.....	18,857.	3.
Ashpits.....	100.	5.
Destructor Waste.....	97.	10.
Street Sweeping.....	1,083.	10.
Gully Cleansing.....	2,509.	10.
Market Refuse.....	215.	6.
TOTAL.....	22,863.	4.

Destructor

Shop Refuse.....	330.	9.
------------------	------	----

Salvage

Materials salvaged during the year were as follows:-

	<u>Tons.</u>	<u>£.</u>
Waste Paper.....	715.	6,125.

The gross expenditure on disposal was £9,208. but with the income from salvage and trade refuse of £6,785. this was reduced to a net figure of £2,423.

Street Cleansing

There was little change in the system of street cleansing. We continue to operate three mechanical sweeper collectors, two electrically propelled pedestrian controlled street orderly carts in conjunction with a number of orderly beats. The town centre is swept daily, the operation being undertaken by small gangs at the commencement of each day. On the completion of this work the gangs break up and take over their own allotted areas. The expansion of housing at Ferry Fryston has naturally caused an increase in sweeping work, this has now been fully absorbed, but the new housing schemes at Love Lane and Whitwood Mere, together with the making up of private streets, will call for added service during the next twelve months.

All street gulleys are cleansed by vacuum tank vehicles which also assist in cess-pool emptying, sewer flushing and similar work. During the summer months some street washing was undertaken, but again the summer weather left much to be desired.

During the Winter we did experience the more normal English climate, repeated frosts built up to a long spell of cold weather in which gritting was constantly needed and once again we had to cope with snow fall. By co-ordinating all possible men and vehicles, not only from the actual cleansing service but from the Highways Department, Parks Department and Direct Building Works Department, we were able to give the whole of the district adequate coverage. I would wish at this stage to express my personal thanks to the heads and personnel of those departments for their very willing and warm-hearted co-operation during the Winter.

The following statistics are taken from the prescribed tables of cleansing costs and should prove of interest:-

Cost Statement 1961/62

(a) Refuse Collection and Disposal

Item	Particulars	Collection	Disposal	Totals	% of total gross expenditure
	1	2	3	4	5

PUBLIC CONVENIENCES

Our existing accommodation was added to during the year by new conveniences at Four Lane Ends, where provision is made for both men and women. These premises are served on a part time basis for cleaning and attendance. At Bradley Street attendance is provided for the women's section but the men's section and all urinals in the town are served by part time attendance and cleaning.

STAFF

There was one change in the staff of the department during the year when in October Mrs.J.Muscroft resigned and was replaced by Miss S.Diggory.

The following are the members:-

Deputy Public Health Inspector,.....	Mr.J.Rooke.
Additional Public Health Inspectors.....	Mr.K.Whitley. Mr.H.Burton. Mr.J.D.Hill.
Technical Assistants.....	Mr.J.S.Hepworth, Mr.R.Hughes. Mr.D.Ward.
Clerks.....	Mrs.N.Ward. Mrs.V.A.Stanshall. Mrs.J.Muscroft to Oct.1961 Miss S.M.Diggory from Nov.1961.

CONCLUSION

In concluding this report I would like once again to express my grateful thanks to all the staff of the department both indoor and out and particularly to Mr.Rooke my Deputy. Mr.Rooke has once again undertaken many duties and much responsibility on my behalf both in the work of the department and in the preparation of this report, and I am most grateful for his help so readily given and so efficiently carried through. I would also wish again to express to the Council my appreciation of the confidence shown in me and again than my colleagues in other departments for their help and support through the year.

I beg to remain,

Your obedient Servant,

E.J.WINFIELD

Senior Public Health Inspector
and Cleansing Superintendent.

Cinder Lane,
25th September, 1962.
