SECTION A

Statistics and Social Conditions of the Area

To the Mayor, Aldermen and Councillors of the Borough of Chard.

Mr. Mayor, and Gentlemen,

I beg to submit my Report for 1972.

Little infectious disease was notified during the year.

There were forty-six deaths due to heart disease, the same as last year.

However, thirty deaths were due to cerebrovascular disease (strokes) and twenty-one died from diseases of the respiratory system, both an increase on 1971.

The main problems confronting the Public Health Committee throughout the year concerned drainage and sewage disposal.

This is my twenty-sixth and last Annual Report on Chard Borough. I wish to thank the Council for the courtesy and consideration it has shown me during my time in Chard.

SECTION B

General Provision of Health Services in the Area

I am, Mr. Mayor and Councillors,

Your obedient Servant,

A. M. McCall

Medical Officer of Health

To the Mayor, Aldermen and Councilors of the Borough of Chard.

Mr. Mayor, and Gentlemen,

I beg to submit my Report for 1912.

Little infectious disease was notified during the year.

There were forty-six deaths due to heart disease, the same as last year.

However, thirty deaths were due to cerebrovascular disease (strokes) and

twenty-one died from diseases of the respiratory system, both an increase

on 1911.

The main problems confronting the Public Health Committee throughout

the year concerned drainage and sewage disposal.

This is my twenty-sixth and last Annual Report on Chard Borough. I

wish to thank the Council for the courtesy and consideration shown

me during the year.

in 2017 with funding from

Wellcome Library

I am, Mr. Mayor and Councilors,

Your obedient servant,

A. M. McCall

Medical Officer of Health

SECTION A

Statistics and Social Conditions of the Area

Population The Registrar General has given the population of Chard as 8,460, an increase on the previous year's total. The density is approximately 7 per acre. The Rateable Value was £343,972 and the product of a penny rate £3,010.

Birth Rate The corrected birth rate was 18.0 per thousand compared with the figure of 14.8 for England and Wales. There were eight illegitimate births giving a rate of five per thousand of all live births. The corresponding national figure was nine.

Death Rate The corrected death rate was 12.7 per thousand compared with a national figure of 12.1. Out of the total of 147 deaths, 46 were due to heart disease, 24 being coronary heart disease. There were 30 deaths from "strokes". Twenty-one persons died from diseases of the respiratory system; this figure has tended to rise during recent years. There were 16 deaths due to cancer. Full details are shown in Appendix A, Table 3.

Maternal Mortality There were no maternal deaths in 1972.

Stillbirths There was one stillbirth during the year.

Infant Mortality There were three infant deaths, all due to prematurity.

Social Conditions There was little change in the mode of life for the majority of people in Chard despite the continued rise in the cost of living. The most dramatic rise was in the cost of houses which reached a level well beyond the resources of most young married people.

SECTION B

General Provision of Health Services in the Area

The health services provided by Somerset County Council continued unchanged during the year.

The Child Welfare Clinic was held twice a month and was well supported.

All the playgroups in the town continued to flourish and all had a waiting list.

Appendix B, Table 1 gives details of the medical inspections carried out. All the schools were visited. The School Dental Officer also visited all the schools during 1972.

The speech therapy clinic was held once a week. There was a fairly long waiting list.

The Family Planning clinics continued as before.

SECTION C

Prevention and Control over Infectious Diseases and Other Diseases

Details of infectious diseases notified are shown in Appendix C, Table 1.

I carried out my routine B.C.G. Programme against tuberculosis in the autumn. Children born in 1959 were those offered vaccination. I vaccinated 162 at the Holyrood Comprehensive School.

I made a number of visits to the abattoir to give injections against anthrax. A total of 52 employees were given protection.

The Ministry Veterinary Officer reported the death of a parrot from psittacosis which had been owned by a resident in the town. All contacts were followed up and treated with terramycin by the private practitioners.

The importation of infected parrots from South America gave rise to epidemics of human psittacosis in the years 1929 - 1930 and this led to the prohibition of the importation of psittacine birds into Britain except under licence and subject to quarantine. With the passage of time and the discovery of effective antibiotics these regulations were revoked in 1966. Since then the number of psittacosis cases reported by the authorities has increased from 35 to 60 per year and in 1971 there were 75 definite and 63 probable cases reported in the United Kingdom. However, psittacosis is not confined to imported birds: budgies bred in this country were the main identified source of psittacosis over twenty years in Glasgow. Sentimental unhygienic intimacies with recently acquired birds are a frequent source of infection.

Starting in April, I arranged for a regular monthly visit of a mass miniature radiography unit to Chard. A large number of residents appeared to make use of this service.

SECTION D

Environmental Health Services

A. Sanitary Circumstances

Climatic Conditions In 1972, although the weather was equable, spring was late and summer did not really start until July. From then on there was a good deal of sunshine and the weather continued mild until the end of the year.

Water Supply The water supply provided by the Wessex Water Board was satisfactory throughout the year both in quality and quantity. Sampling was carried out regularly by the Wessex Water Board (24 samples) and by our own health department (6 samples). All the samples examined were satisfactory. The Board supplies every house in Chard with one exception. This house depends on a well supply. This was sampled and found to be unsatisfactory.

Drainage and Sewage Disposal During the year the Committee were engaged in the preparation of schemes to deal with the surface water drainage in the Crimchard/Furnham Road area and the Crowshute/Old Town area. The total cost of these schemes was approximately £300,000. It is hoped that when this work is effected the amount of surface water reaching the sewage works will be considerably reduced.

Over the course of the last few years planning permission has been given for housing around the perimeter of the works and in the summer the Committee received a petition from Henson Park, Fairway Rise, Middle Touches and Lower Touches with regard to nuisance smells from flies, mosquitoes and bluebottles which, the residents contended, came from the sewage works. The Public Health Inspector made numerous visits to the areas of complaint and in his opinion, a smell was sometimes noticed but was not sufficiently strong enough to be classified as a Statutory Nuisance. It was felt that the planting of a screen of trees on the eastern boundary would help and this work was put in hand in the autumn.

There is no doubt that the troubles arising at the works were not helped by vandals on two occasions opening the valves and discharging liquid sewage over a large area.

Refuse Collection The Council continued their regular weekly collection of refuse. The Snowdon Hill Tip is rapidly filling and it is admitted that it will not be possible to tip there after March, 1974. Attempts to find an alternative site in the Rural District have so far failed.

Public Conveniences The public conveniences were well maintained but subject to vandalism from time to time.

Rodent Control Our part-time rodent control operator carried out regular test baiting on Council property and sewers. Numerous complaints were received of rats and mice. These were treated promptly.

Swimming Baths The bath at the Comprehensive School was maintained by the staff in accordance with the County Manual for Bath Maintenance.

Nuisances One hundred and ninety-one complaints were received in the health department. They varied in type. Many concerned drainage matters and nuisance from smell. Trade effluent discharges, especially from the abattoir, were a fairly constant problem. Negotiations were in hand for the provision of a pre-treatment plant by the abattoir company.

B. Factories Act

Details of the inspections carried out by the Public Health Inspector are shown in Appendix D, Table 1.

C. Offices, Shops and Railway Premises Act

There are 141 premises registered under this Act and 120 visits were paid to these premises during the year. No statutory action was necessary.

D. Housing

The Council erected four houses and were in the course of erecting 32 others, while private enterprise completed 109 and had 73 in the course of erection at the end of the year. Despite their excellent record, the total number of applicants continued to rise and there were 414 on the list at the end of the year. Seventy-nine were for old peoples' dwellings.

The Council continued to encourage applications for Standard and Discretionary Grants and gave approval to 14 Discretionary and ten Standard Grants.

Caravan Site There is one licensed caravan site and it is estimated 30 persons were resident on it during the year. It was well maintained.

E. Inspection and Supervision of Food

Milk There are six registered distributors and two registered dairy premises within the Borough. Milk sampling was carried out regularly by the County Health Department and 53 samples taken. Only three were unsatisfactory.

Ice Cream There are 32 premises registered for the sale of pre-packed ice cream and one registered for the manufacture and sale. The Public Health Department took 23 samples, 15 were placed in Grade 1, five in Grade 11 and three in Grade 111.

Meat The abattoir in the town continued to do a considerable volume of work. One hundred per cent meat inspection was achieved. Details of these inspections are given in Appendix D, Table 3. Inspection involved, 1,460 visits and a total of 5,045 hours.

Food Hygiene Regulations There are 67 premises subject to these Regulations and 118 visits were made and a further 14 inspections of mobile food traders carried out.

In addition the Public Health Inspectors dealt with licences issued under the Explosives Act, visits to factories, inspections under the Housing Acts, inspections under the Pet Animals Act and visits in connection with Petroleum Regulations.

These involved a total of 400 visits.
