M. HINBEST, S.R.N., S.C.M., H.V's Certificate.

F. E. GAFFNEY, S.C.M.

Chief Clerk-H. L. CLARK.

Clerks-A. C. STRIKE

-G. A. PEARSON

-Miss M. Rogers

Borough of Chatham.

To the Mayor, Aldermen and Councillors of the Borough of Chatham.

MADAM AND GENTLEMEN,

The year 1937 has been notable by the retirement after 49 years' service of Dr. John Holroyde. The changes in the Public Health services in nearly half a century have been many. To Dr. Holroyde has been given the pleasure and justified pride in seeing the results of his work, the slums have nearly gone, whilst the infant mortality rate has fallen to one third of what it used to be and deaths from infectious disease are now very rare indeed.

But new problems are in front of us. Dr. Holroyde in his report for 1936 calls attention to the most serious of them, viz., the aging population with an ever increasing proportion of persons too old for work who have to be maintained by those in work.

You will not I feel sure expect me to comment at length on the

figures contained in this report.

The necessity for an increase in the Dental services has been pointed out in previous reports by Dr. Holroyde and the Council have appointed a new whole time dentist, Mr. W. C. Griffiths, who takes up duty on 8th. June, 1938. The Council have also carefully considered the effects of the new midwives act on the ante-natal clinic and the fact that a whole time dentist will require more dental anaesthetics than have previously been given.

It was shown to be more economical and more efficient to appoint a whole time Assistant Medical Officer to undertake the duties previously carried out by three part time Medical Officers and most of the refraction work sent to St. Barts. Dr. Wm. Ainslie was therefore appointed Assistant M.O. and he will com-

mence duty on 3rd. June, 1938.

In conclusion I wish to thank all the members of the staff, in particular Mr. W. Hughes, the Senior Sanitary Inspector, who retired on 31st March, 1938. They gave Dr. Holroyde unstinted service and loyalty and that same service and loyalty has been transferred to me.

To the Members of the Health and Maternity and Child Welfare Committees I would express my deep appreciation and thanks for the courtesy and consideration they have always given me.

I am,

Your obedient servant,
J. C. SLEIGH,
Medical Officer of Health.

Chatham.

10th. May, 1938.

Section A.

Section B. GENERAL PROVISIONS OF HEALTH SERVICES FOR THE AREA.

LABORATORY FACILITIES.

All bacteriological examinations are carried out at the County Laboratory at Maidstone. There is no delay in sending results. Chemical analyses are performed by the County Analyst.

AMBULANCE FACILITIES.

An ambulance is provided by the Joint Hospital Board for the removal of Infectious Disease cases and the Ambulance possessed by the Council is used in emergencies and also during the periodical overhaul of the hospital ambulance. An ambulance for the removal of accidents and general sickness is kept at the Chief Fire Station and operated by Officers of the Fire Brigade. The St. John Ambulance Brigade also provides an Ambulance Service.

The above arrangements appear to be adequate.

NURSING IN THE HOME.

The District Nursing Association employs three Nurses who attend cases at the request of the doctor in attendance. Should the occasion arise the Council has an arrangement with the Association for the home visiting of Measles, Whooping Cough, Diphtheria and Pneumonia.

CLINICS AND TREATMENT CENTRES.

1. Maternity and Child Welfare, Elm House, 15, New Road Avenue.

An Ante-natal Clinic is held on the first Thursday in each month at 10.30 a.m.

Children under 5 years of age :-

Tuesdays and Thursdays at 2.30 p.m.

Fridays (weighing and food distribution only).

2. Diphtheria Immunisation.

Held on Wednesdays at 2 p.m.

3. School Clinics.

Medical Inspection :—

Wednesdays and Saturdays at 9.30 a.m.

Minor Ailments :-

Daily at 9 15 a.m.

Dental :-

Monday, 1.30 p.m.

Wednesdays and Fridays, 9.30 a.m. to 12.30 p.m. and 1.30 p.m. to 4.30 p.m.

The above are provided by the Council and the Education Committee.

4. Tuberculosis Dispensary, 13, New Road, Rochester-Tuesdays, 2 p.m. to 3 p.m. and 5 p.m. to 6 p.m. Fridays, 9.30 a.m. to 10.30 a.m.

5. Treatment Centre for Venereal Diseases, 36, New

Road, Rochester.

Tuesdays and Thursdays for consultations. Daily for treatment.

The last two are provided by the Kent County Council.

CLINICS AND TREATMENT CENTRES.

Following the appointment of a whole time Assistant Medical Officer of Health and whole time Dentist the above Clinics will be re-arranged from 1st June, 1938, as follows:—

1. Maternity and Child Welfare.

(a) Ante Natal Clinic-Every Thursday 2-4.30 p.m.

(b) Children under 5 years of age.

Mondays (weighing and food tickets only), 2—4.30 p.m.

Tuesdays:— 2—4.30 p.m. Fridays:— 2—4.30 p.m.

(c) Mothercraft: Mondays, 2-4.30 p.m.

(d) Dental:— By appointment.

2. Diphtheria Immunisation.

Wednesdays: 2-4.30 p.m.

3. School Medical Service.

(a) Minor Ailments and Medical Inspection, 9—9.45 a.m. daily.

(b) Dental, daily 9-4.30 p.m. by appointment.

(c) Refraction 1 session per week by appointment.

(d) Medical Inspection at Schools. 4 Sessions per week by appointment.

HOSPITALS.
(a) Public.

County Hospital.

The present allocation of beds is as follows:-

Proposed control	-	2000 10 00 10110 110	*

 ...

There are 14 beds reserved for paying patients.

Additional buildings are being erected, which will provide 74 more beds. Two general operating theatres provided with the

latest type of equipment are now in use.

There is a large Out-patients' Department and special departments for Ophthalmic, Throat, Ear and Nose and Orthopoedic Cases, together with a Laboratory, Electrical and X-Ray installation.

Facilities for the treatment of Cancer by Radium and deep

X-Ray Therapy are provided.

A working arrangement regarding the transfer of cases from one Institution to the other has been effected with the County Hospital.

The increased accommodation at both these Institutions should go far towards securing earlier treatment for cases and

the consequent reduction of the waiting list.

MATERNITY AND CHILD WELFARE.
Midwifery and Maternity Services.

The Supervising Authority for Midwives is the Kent County Council.

The 1936 Midwives Act was brought into operation on 1st October, 1937, by the appointment of 8 whole time salaried

midwives for Chatham by the Kent County Council.

All fees for the services of these midwives are paid to the County Council who make reductions as necessary in cases where the patient is unable to pay the full fee. In consequence the payment of midwives fees in necessitous cases by the Borough Council has ceased as being unnecessary. The appointment of these midwives with strict instructions to see that their patients have proper Ante-natal supervision has resulted in the Ante Natal Clinic held once a month being hopelessly overcrowded. From June 1st, 1938 this Clinic will be held every Thursday afternoon.

Home Help Service.

The services of a Home Help are available to all mothers for their confinement or illness due to pregnancy. Payment is on a sliding scale according to the income and number in family. This scale has recently been revised so that those able to pay, pay more than formerly. The service has proved a great boon to many mothers, especially those who have recently come from afar to Chatham where they have no relatives.

Institutional Provision for Mothers or Children.

Beds are available for cases of acute illness at St. Bartholomew's Hospital and the County Hospital. If convalescent care is needed it is secured at a suitable Institution and a Cot Fund is available. The Salvation Army and the Rochester Diocesan Society receive unmarried mothers in their homes.

Health Visitors.

There are three. Details of their work will be found in

succeeding pages.

Infant Life Protection (Part 1 of the Children Act, 1908, amended by the Children and Young Persons Act, 1932 and the Public Health Act 1936.

The requirements of this Act, which extends to children under the age of 9 years, who are received for payment, necessitates frequent inspections to see that the premises are suitable, and that

the children are properly cared for.

The Health Visitors act as Infant Protection Visitors. At the end of 1937 there were 8 persons receiving children for reward and the number of boarded-out children was 8. The number of visits paid was 77.

Nursing Homes-Public Health Act 1936.

There is one Nursing Home on the register which takes in medical, surgical and maternity cases.

Ante-Natal Clinic.

This is held at Elm House on the first Thursday in each month. 123 expectant mothers attended for the first time. 231 attendances were made. The operation of the Midwives Act 1936 has made this inadequate and from 1st June, 1938 the Clinic will be held every Thursday afternoon.

Maternal Mortality.

Deaths occurring during pregnancy and child birth are investigated by the Medical Officer of Health.

Supply of Dried Milk, etc.

This is supplied at cost price and also free and reduced in necessitous cases. The number of packets issued was 15,449. Inspection of Women's Conveniences.

The Senior Health Visitor paid 195 visits for this purpose.

The Council's arrangements for supervising the health of children from birth to 5 years of age and of expectant and nursing mothers are as follows:—

1. The visiting of children in their homes.

- 2. The provision of Dried Milk and Cod Liver Oil at cost price or at a reduced rate, or free to expectant and nursing mothers and infants.
- 3. The provision of Sterilized Maternity Outfits.

4. Dental Treatment.

5. Treatment of Minor Ailments such as Impetigo, Discharging ears, etc.

6. Hospital treatment for more complicated cases.

- 7. Visiting of cases of Puerperal Sepsis and Ophthalmia Neonatorum.
- 8. A Mothercraft Centre.
- 9. An Ante-Natal Clinic.
- 10. The payment of Midwives' Fees in necessitous cases.
- 11. Maternity beds at the Royal Naval and Marine Maternity
 Home and the County Hospital. Fees are according
 to patients' means.

12. Investigation of Maternal Deaths.

13. Provision of Home Helps in Maternity Cases.

Section C.

SANITARY CIRCUMSTANCES OF THE AREA. RAINFALL DURING 1937.

I am indebted to W. Coles Finch, Esq., for the following figures taken at Luton Waterworks.

Month.			De	pth in Inches
January				4.95
February				4.08
March				3.73
April				2.32
May				3.09
June				2.40
July				1.71
August				2.35
September				2.08
October				2.35
November				1.60
December				3.91
Total for	12 m	onths		34.57

CHEMICAL ANALYSIS.

Twenty-eight samples of water were submitted for bacteriological examination during 1937, and in all cases the Analyst reported the absence of coliform organisms in 50 c.c. of the samples, and that the waters were in a satisfactory bacteriological condition and suitable for drinking purposes. During the same period 4 samples were chemically examined and found to be of a high degree of organic purity.

DRAINAGE AND SEWERAGE.

The Outfall Works are at Motney Hill, Rainham and the scheme includes the three Medway Towns.

In Chatham 10,218 houses are connected.

A relief Sewer for storm water and extension for the drainage of new houses is now being constructed.

The sewage at the Outfall Works is treated by Tank Settlement only, owing to the very large dilution of the effluent.

RIVERS AND STREAMS.

The Medway is a tidal stream and inevitably undergoes pollution during its course, but no local action is taken.

CLOSET ACCOMMODATION.

The majority are now connected with the Main Drainage System.

Particulars are given in the Senior Sanitary Inspectors report.

PUBLIC CLEANSING.

General public cleansing of street gullies, household and trade refuse is carried out by the Borough Engineer's Department. In the central parts of the town there is a daily removal, in other parts twice weekly.

Disposal is by controlled tipping and what was formerly an unsightly, foul smelling and rat breeding dump is now devoid

of nuisance.

RATS AND MICE DESTRUCTION ACT 1919.

SHOPS ACT, 1934.

The Sanitary requirements of shops, adequate ventilation, and temperature are looked after by the Public Health Department, and 297 visits have been paid during the year.

SMOKE ABATEMENT.

No nuisance and no action.

SWIMMING BATHS AND POOLS.

There are no public or privately owned baths in Chatham. ERADICATION OF BED BUGS.

During 1937, 23 Council houses were found to be infected and 51 other houses; total 74. All these were disinfected and all house effects from Slum Clearance Areas have been treated for the eradication of bed bugs.

SENIOR SANITARY INSPECTOR'S REPORT FOR 1937.

DEAR SIR,

I beg to submit by Report of the work of the Public Health Department during the year ending 31st December, 1937.

DRAINAGE CONNECTIONS TO THE CORPORATION SEWERS.

625 house drains were connected to the Corporation sewers during the year—516 were new houses and 109 old houses. The total number of houses now connected to the Corporation sewers is 10,218 or 89.5% of the houses in the Borough.

CESSPOOL WORK.

During the year complaints were received on 918 occasions and on investigation 634 were found to be choked drains, whilst the other 284, the cesspools were found to be full and required emptying. 586 cesspools were emptied, from which were taken 612 loads of night sewage, and 464 loads of liquid sewage by day. The number of choked drains cleared on complaints received was 630. During the demolition of houses all cesspools were emptied, deodorized and filled in, several of these being emptied without complaints being received, and in some instances one complaint received necessitated the emptying of two or more cesspools.

COWSHEDS AND DAIRIES.

There are 7 Registered Cow-keepers and 14 Registered Cowsheds. There is one Producer of Accredited Milk, 2 Wholesale Producers of Ordinary Milk (one Purveyor of Pasteurised Milk, Accredited Milk and Tuberculin Tested Milk, from outside the Borough), 19 Purveyors of Ordinary Milk, and 126 Purveyors of Bottled Sterilized Milk. To the several premises 429 visits were made, 8 Notices were served to cleanse and 1 to repair.

SLAUGHTERHOUSES.

Seven Registered and one Licenced Slaughterhouse are in the Borough to which 2,628 visits were made. Two Notices were served to cleanse and one to repair.

UNSOUND FOOD SURRENDERED, 1937.

DECOMPOSITION.

49 boxes Fish; 66 parcels Beef; 4 tins of Corned Beef; 27 Pig Plucks; 4 tins Miscellaneous Foodstuffs; 10 tins of Lambs'

Livers; 28 Bovine Livers; 229 Rabbits; 84 Bovine Kidneys; 800 Eggs; 5 Chickens; 100 miscellaneous packets of Ice-Cream; 3 Bovine Hindquarters.

Total Weight: 18 tons, 5 cwts. 3 qrs. 7 lbs.

BAKEHOUSES.

There are 17 Bakehouses on the register of which 10 are factory bakehouses and 7 are workshop bakehouses—2 of the latter are classed as underground bakehouses. One of the factory and 4 of the workshop bakehouses are in disuse—one of the latter being underground. Periodical Notices are sent to all occupiers calling their attention to the times of limewashing. 60 visits were made to these premises.

FISH OFFAL COLLECTION.

Fish offal is collected daily from 15 shops. As the fish bins are removed a clean bin is left and 2/- per week is charged for the collection and use of the bins. The fish offal is purchased by one of the local farmers and is ploughed into the land as manure, so that no nuisance arises. A special van is provided for the collection and disposal of the offal.

INFECTIOUS DISEASES.

236 Cases of Diphtheria and 127 cases of Scarlet Fever were removed to the Isolation Hospital. 564 loads of infected bedding were removed and disinfected and in 3 cases Outwork was found on infected premises. 76 books from the Public Library, 47 from private libraries and 10 School Books were removed and fumigated.

COMMON LODGING HOUSES.

Four Common Lodging Houses are on the Register to which 27 visits were made and 2 Notices were served to repair. These premises are well kept and most of the lodgers are permanent. Periodical Notices are served on the keepers calling their attention to the times for limewashing.

HOUSES LET IN LODGINGS.

Twenty-three of these premises are on the Register to which 79 visits were made. 16 of these premises, forming one block, were overhauled and put into a thorough state of repair. They are chiefly occupied by aged persons and the bedding and premises are clean and well kept.

OFFENSIVE TRADES.

There are 23 Fish Friers, 2 Knackers Yards, 3 Old Metal Dealers, 4 Marine Store Dealers and 1 Gut Scraper on the Register. (The Gut Scraper has temporarily ceased business owing to the change of occupiers.) 100 visits were made to the several premises. 2 Notices were served to cleanse and 1 to repair.

MORTUARY.

Twenty-seven bodies were removed to the Mortuary—15 males and 12 Females, of which 5 were children. There were 26 post mortems. No bodies were buried at the expense of the parish.

CONTAGIOUS DISEASES OF ANIMALS ACTS.

One case of suspected Swine Fever was reported to the Ministry of Agriculture and Fisheries, but was not confirmed.

CATTLE TUBERCULOSIS ORDER, 1925.

Four Cases of suspected Tuberculosis were reported from different dairy farms. On slaughtering 3 were found to be affected with Generalised Tuberculosis and one was found not to be affected

CLEARANCE AREAS.	
Particulars and inspections for 5 Clearance Areas, 18 hous	
were completed with a view to reporting early in 1938. Withese 18 houses the total now dealt with in Clearance Areas	

now 262.

INDIVIDUAL UNFIT HOUSES.

255 houses were reported up to the end of 1937. Of these 165 were demolished;

" rendered fit; 48

" closed under undertaking not to re-let;

,, not yet demolished; ,, undertaking to make fit not yet completed. 11 There have been 38 individual unfit houses reconditioned by informal action, and parts of 2 houses have been the subject of Closing Orders.

Section E. INSPECTION AND SUPERVISION OF FOOD.

Particulars of the number of Cowsheds, Registered Cowkeepers and Purveyors of Milk, are given in the statement of the Sanitary Inspector, also the number of inspections of these premises.

A quarterly inspection and report as to the condition of Milch

Cows is made by the Veterinary Officer.

A monthly bacteriological examination of the pasteurised

milk supplied to school children is made.

32 samples of Milk were sent to the County Laboratory for analysis—5 being accredited, 10 for Biological examination and the remainder for Bacterial Count.

MEAT AND OTHER FOODS.

There are 5 slaughterhouses in the Borough where slaughtering each day is carried out and much of the Inspector's time is devoted to the inspection of meat which is slaughtered at these premises. Every attempt is made to inspect all meat slaughtered and as far as can be ascertained this has happened during the last 12 months. A considerable quantity of meat slaughtered in Chatham is sold in towns around Chatham and also taken to Smithfield Market in London and it has been necessary for the Inspector on duty to work many hours outside his ordinary working hours to accomplish this.

18 tons 5 cwts. 3 qrts. 7 lbs. of meat was surrendered during

the year as being unfit for human consumption.

Carcases Inspected and Condemned

Carcases Inspected and Condemned.

POTTED AND PRESERVED MEAT.

The supervision of this class of business is important. Ready cooked and prepared foods are being increasingly used by the public and a close watch is kept on such premises. They are registered under a Local Act.

ICE CREAM.

The manufacture of ice cream is the subject of regulation under the Chatham Corporation Act, 1923. Most of this commodity comes into the town from large wholesale producers.

FOOD AND DRUGS (ADULTERATION) ACT 1928.

I am indebted to W. R. Breed Esq., for the subjoined particulars:—

HOSPITAL ACCOMMODATION FOR INFECTIOUS DISEASES.

St. William's Hospital situated in Rochester is used jointly

by Rochester and Chatham.

It has accommodation for 85 patients, based on a standard of 144 sq. feet per bed, and the site is capable of extension for 120 beds.

With the exception of Small Pox, for which separate provision

has been made, any type of infection is admitted.

For Small Pox, if cases should occur, they will be admitted to the London County Council Hospital at Joyce Green. In the event of accommodation not being available there, they will be taken into the old Small Pox Hospital at Rochester.

SCARLET FEVER.

Cases Notified	 	 160
Removed to Hospital	 	 127
Households affected	 	 137
Deaths	 	 Nil

Scarlet Fever has been rather prevalent during the second half of the year. It has been of a mild type and there have been no deaths.

Fuller knowledge of this disease has shown that it is not one disease but many closely allied diseases, that an attack of one variety does not give immunity to the other varieties and that the group is much more widespread than was thought owing to the fact that it is now known that the majority of cases show no signs of the rash. In St. William's Hospital it is impossible to isolate each type of Scarlet Fever from the other types and there is therefore risk of a patient entering the hospital with say type 2 becoming infected in hospital with, say, type 4 or 6, etc. Fo this reason alone it is better for cases of Scarlet Fever to be nursed in their own homes unless they are either

(1) So ill as to require hospital treatment, or

(2) So situated as to be a special danger to public health, e.g., in a house connected with the sale of food, especially milk.

When it is realised that only those cases of this group of diseases showing a rash are notified as Scarlet Fever whilst the others constituting at least two thirds of the total are ignored, the reason will be apparent why the policy of securing admission to hospital of all cases of Scarlet Fever has completely failed to make any difference in the incidence of the disease.

In the subjoined Table are particulars of Scarlet Fever from

1916-1937 :--

DIPHTHERIA.

Cases Notified	 	 261
Removal to Hospital	 	 236
Households affected	 	 229
Deaths	 	 3

Diphtheria has been very prevalent during the 2nd half of the year. This has been very disappointing after our work in immunisation which has gone on since the end of 1929. Still those who have been properly immunised have reaped the benefit. Since 1929, 3,531 have been immunised and only 24 cases of Diphtheria have been notified who have been immunised giving a rate of 0.68 per cent whilst for the non immunised population up to the age of 20 the number of cases was 225 giving a rate of 1.6 per cent. Nor is this the whole story of the 24 cases occurring in immunised subjects, none were seriously ill, many were not clinically Diphtheria at all but were merely notified because a swab was positive for Diphtheria and there were no deaths.

Diphtheria is a disease where the germs live and multiply on the surface of the throat and the serious effects are due not to the local inflamation in the throat but to the toxins given off by these germs and absorbed into the blood.

By immunisation we confer on the body the power to neutralise the toxins in the blood and so save the patient from their ill effects. We do not and cannot at present add to the power of the body

to attack the germs themselves.

The effect therefore, of immunisation might be expressed as allowing the patient to have diphtheria ON him but not IN him. But this means that a patient with Diphtheria germs on him but doing him no harm is unaware that the germs are there at all yet these germs are virulent if given to a non immunised person, i.e., there is an increased danger from carriers.

Particulars of Diphtheria from 1916 to 1937 :-

Year	Cases Notified	Deaths	Death Rate per cent. of those attacked
1916 1917 1918 1919 1920 1921 1922 1923 1924 1925 1926 1927 1928 1929 1930 1931 1932 1933 1934 1935	76 34 31 27 261 176 61 27 14 47 222 252 447 98 44 26 11 25 31 22 252	3 2 1 2 13 16 6 2 17 19 30 11 1 1 1 2	4 6 3 7 5 9 10 — 4 7 7 7 6.7 1.2 2.3 — — 3.2 4.5 8

SUPPLY OF ANTITOXIN.

Diphtheria Antitoxin is kept at the Town Hall and at the Chief Fire Station. It is supplied free of charge and is obtainable by Medical Practitioners at any hour of the day or night. The number of units issued during 1937 was 3,064,000.

IMMUNISATION AGAINST DIPHTHERIA.

The Clinic first opened at the end of 1929 is held every Wednesday.

New Cases 398 Immunised 381 ... Attendances 1773

The immunising Agent used up till the end of July was Toxoid Antitoxin Mixture (T.A.M.) when 3 inoculations were given at fortnightly intervals, a final Schick Test being made about 3 months after the last injection. The dosage for the first two inoculations is l.c.c. and for the 3rd 1.5 c.c. If there was a positive reaction Toxoid Antitoxin Floccules (T.A.F.) was used.

From July onwards Alum Precipitated Toxoid (A.P.T.) was used when only 1 small dose is given to test the child's reaction and if satisfactory the full dose is given 3 weeks later. The child is then Schick Tested 2 or 3 months after. The dosage for the first dose is 0.1 c.c. (children over 10) and 0.2 c.c. (children under 10), the full dose being 0.4 c.c. The number of children who showed Schick Positive reaction after 3 doses of T.A.M. was 10, but since A.P.T. was used there were no children requiring further injections.

The following table shows the numbers and ages of the new

1- 2 years	2- 3 years	3- 4 years	4- 5 years	5- 6 years	6- 7 years	7- 8 years	8- 9 years	9-10 years	10-11 years	11-12 years	12-13 years	13-14 years	Totals
107	40	34	32	96	18	13	23	9	7	9	5	5	398

The total number of children who have been immunised since 1929 is 3531.

The yearly figures are as follows:-

1930 1931 1932 1933 1934 1935 1936 1937 Total New Cases ... 432 614 575 459 392 526 415 398 388 560 561 405 359 482 395 381

... Immunised ... Attendances... 2182 2716 2819 2295 1944 2271 2049 1773

In order to keep up attendances constant propaganda work is necessary and is carried out at the Child Welfare Centre, Clinics and Schools by the Health Visitors and School Nurses and by the exhibition of posters.

ENTERIC FEVER.

There were no cases.

SMALL POX.

No cases.

VACCINATION.

I am indebted to the Vaccination Officer of the Chatham and Rochester District for the following information:—

Number of cases in the Birth Lists received dur	ing	
the year		921
Number of certificates of successful vaccination		495
Number of certificates of postponement owing	to	
health of child		18
Number of statutory declarations		398
Number of certificates of insusceptibility		3
Number of removals from district		35
		17
Percentage vaccinated		

NON-NOTIFIABLE DISEASES.

There were only 10 cases of Measles notified from schoolsduring the year.

There were no deaths.

INFLUENZA.

Nineteen deaths were registered as directly due to Influenza, but as the fatal issue is usually due to Bronchitis or Pneumonia, no doubt many of the deaths attributed to these causes were associated with Influenza.

CANCER.

The facilities for diagnosis and treatment are, general practitioners, the County and Voluntary Hospital.

The latter institution is a radium centre.

The total number of deaths was 44 males, 27 females.

PREVENTION OF BLINDNESS.

No action has been taken under Section 176 of the Public Health Act, 1936.

VENEREAL DISEASE.

The treatment centre for the Medway Area is situated at 36, New Road, Rochester and is provided by the Kent County Council. The following particulars are supplied by H. Nicol, Esq., F.R.C.S., the Medical Officer in charge.

	Pulmonary			52		
	Non-Pulmonary			9		
			300			

Twenty of the above removals were presumed to be cured, as there was no record of continued treatment and five years had elapsed in the case of Pulmonary Tuberculosis and three years in the case of Non-Pulmonary Tuberculosis since the Primary Notification.

Thirty-two had died and 9 had left the district.

There were 5 deaths from unnotified cases of Tuberculosis.

I am indebted to Dr. Charles Roper, the Tuberculosis Officer for this Area for the following:—

Particulars of Patients from the Chatham Area dealt with at the County Tuberculosis Dispensary during the year ended December 31st, 1937.
