5, ABERCROMBIE STREET, CHESTERFIELD:

TO THE CHAIRMAN AND MEMBERS

OF THE

CHESTERFIELD RURAL DISTRICT

COUNCIL.

18, GLADSTONE ROAD,

CHESTERFIELD,

3RD APRIL, 1905.

GENTLEMEN,

I beg to lay before you my Seventh Annual Report upon the Health of the District.

I beg to acknowledge with thanks the assistance received during the year from various Members of the Council and the Inspectors.

I am, Gentlemen,

Your obedient servant,
HERBERT PECK,

M.D., C.M. Edinburgh; D.P.H. Cambridge.

		YEAR.	I	1894	1806	1897	1808	1899	1900	1061	1902	1903	Averages for years 1894-1903	1904

* Rates in Columns 4, 8, and 13 calculated per 1,000 of estimated population.

Note.—The deaths included in Column 7 of this Table are the whole of those registered during the year as having actually occurred within the district or division. The deaths included in Column 12 are the number in Column 7, corrected by the subtraction of the number in Column 10 and the addition of the number in Column 11.

By the term "Non-residents" is meant persons brought into the district on account of sickness or infirmity, and dying in public institutions there; and by the term "Residents" is meant persons who have been taken out of the district on account of sickness or

The "Public institutions" taken into account for the purposes of these Tables are those into which persons are habitually received on account of sickness or infirmity, such as hospitals, workhouses and lunatic asylums. A list of the Institutions in respect of the deaths in which corrections have been made is given on the back of this Table. infirmity, and have died in public institutions elsewhere.

Area of District in acres (exclusive of area covered by water), at Census of 1901, 68,789. Total population at all ages at Census of 1901, 68,559. Number of inhabited houses at Census of 1901, 13,557. Average number of persons per house at Census of 1901, 5.057.

I.	II.	III.
Institutions within the District receiving sick and infirm persons from outside the District.	Institutions outside the District receiving sick and infirm persons from the District.	Other Institutions, the deaths in which have been distributed among the several localities in the District.
The North Derbyshire Hospital Committee's Mastin Moor and Morton Isolation Hospitals; and Spital Smallpox Hospital, Hasland.	Chesterfield and North Derbyshire Hospital, Chesterfield. Union Workhouse, Chesterfield.	Royal Infirmary, Sheffield. Royal Hospital, Sheffield.
		Children's Hospital, Sheffield

A REPORT. KO

The Population.—Estimated according to the method of the Registrar-General, which is based on the principle of regularity in the increase of population, the population at the middle of last year was 71,940. This method not allowing for the sudden changes in population consequent on the opening or closing of collieries or other works, I have estimated the population on the number of inhabited houses, as kindly furnished me by the Assistant Overseers, and I accordingly take 74,628 as the Population at the middle of the year.

The Parishes which showed increases on the census figures and the increases shown, were as follows:—Ashover, 12; Beighton, 45; Brackenfield, 5; Brimington, 89; Calow, 60; Dronfield Woodhouse and Eckington, each 21; Hasland, 327; Heath, 205; Holmesfield, 32; Killamarsh, 57; Morton, 16; North Wingfield, 107; Pilsley, 72; Shirland and Higham, 12; Staveley, 47; Sutton-cum-Duckmanton, 75; Temple Normanton, 46; Tupton, 42; and Unstone, 5; total, 1,296. Barlow showed a decrease of 3; Coal Aston of 1; Stretton and Wingerworth of 3 each; Wessington and Woodthorpe of 2 and 1 respectively; total, 13. The net increase was 1,283.

Birth Rate.—The number of Births registered as occurring in the District was 2,516, and 13 occurred in the Union Workhouse, which properly belonged to it. These 2,539 Births are equal to a Birth Rate of 34.1 per 1,000 living, which is below the decennial average of 36.5, but well above that for England and Wales.

This and other rates are compared with those of neighbouring districts, and England and Wales, in Table V.

The illegitimate births, including 10 in the Union Workhouse, were 90, and are equal to an Illegitimate Birth Rate of 3.5 per cent.

Synoptic Table of the Foregoing Rates, and the Rates of Neighbouring Districts, and England and Wales. TABLE V.

		1904.	England and Wales	Rural England and Wales	76 Great Towns	142 Smaller Towns	Brampton and Walton Urban District	Clay Cross Urban District	Dronfield Urban District	Newbold and Dunston Urban District	Whittington Urban District	Borough of Chesterfield	Chesterfield Rural District	Chesterfield Rural District.—Average years, 1894 to 1904

Death Rate.—The 1.047 deaths registered as occurring in the District included 3 from smallpox of strangers. The deduction of these and the addition of 56 belonging to the District, which occurred in public institutions outside it, gives 1,100 as the correct number for the District, which are equal to a Death Rate of 14.7 per 1,000 living. This is well below the decennial average of 16.2, and those for England and Wales, and Rural England and Wales.

The rate was highest in Temple Normanton and Suttoncum-Duckmanton, where perhaps the population has been underestimated, and lowest in Holmesfield, Stretton, and Woodthorpe, rural parishes with a small population.

The rate for each parish is given in table VI.

Owing to the early publication of the report for 1903 of the Registrar-General, I am able for the first time to contrast decennial averages of the District and England and Wales, as in Table VII.

Zymotic Death Rate.—The 152 deaths ascribed to the seven principal zymotic diseases, which are smallpox, measles, scarlet fever, whooping cough, diphtheria or membranous croup, fever (including typhus, enteric, and continued), and disrrhæa, are equal to a Zymotic Death Rate of 2.04 per 1,000 living. This is above the decennial average of 1.30 for the district, and practically the same as the decennial average of England and Wales.

The increase upon the 1.78 of the previous year was principally due to the increase in the number of deaths returned as caused by diarrhœa, which was equal to .24 per 1,000.

The rate was highest in Temple Normanton, where (as previously stated) the height of the rate may be due in part to an under-estimate of population, Sutton, Tupton, Brimington, and Wessington, and nil in Barlow, Holmesfield, Wingerworth, and Woodthorpe, all parishes of small population.

Infant Mortality.—The deaths of infants were 361 in number, and are equal to an Infant Mortality Rate of 142 per 1000 births, This is below the decennial average of 149, and though higher than that for Rural England and Wales, is below that for England and Wales.

TABLE VI.-Vital and other Statistics of the Chesterfield Rural District during 1904.

The rate ranged from 778 in Dronfield Woodhouse, 333 in Woodthorpe, and 286 in Temple Normanton, to nothing in Stretton, Wessington, and Wingerworth, all these being parishes of small population. Heath and Sutton-cum-Duckmanton were the only parishes with populations of upwards of a thousand which had a rate of upwards of 200. They had rates of 203 and 286 respectively, and had each a rate of 323 in 1903. When taken on a large population, or over a number of years, this rate is a valuable indication of the sanitary condition of a district.

Smallpox.—Houses infected, 4; cases, 8; deaths, 0. A Calow patient contracted the disease while working away from home. A Staveley patient, who travelled each weekday by railway train, contracted the disease in the train or away from home, and infected his mother and three sisters. One of the latter was a teacher at Renishaw School, where she infected the two Renishaw patients.

All the patients were removed at once to the Spital Small-pox Hospital, Hasland; and all persons known to have been in contact with them vaccinated or re-vaccinated, when they would consent to the operation. One school teacher was quarantined; and all the infected houses, bedding, and clothes disinfected.

No spreading took place after the cases were reported to me.

Many cases reported to me as being Small-pox turned out on examination to be cases of other diseases.

Vaccination.—Mr. Clayton, Vaccination Officer, has kindly informed me that the primary vaccinations in the Chesterfield Union during the year were 3,762, and the re-vaccinations 122.

The figures were: 3,503 and 932 in 1903; 3,931 and 1,276 in 1902; and 2,857 and 20 in 1901.

Scarlet Fever.—Houses infected, 383; cases, 578; deaths, 24. The prevalence of this disease was greater than in any year since 1899, and the mortality also was greater than in that year, being the same as in 1897, and only one less than in 1896. The mortality was also proportionately greater than usual, being at the rate of 4·1 per cent. of the cases, as compared with the average for the previous ten years of 2·6.

Most of the Beighton cases occurred in the first half of the year, and appeared unconnected with school attendance.

[§] Average of three years; * average of four years; † average of five
years; † average of six years.

Many of the Brimington cases were due to the reckless manner in which children were permitted to enter infected houses. On one occasion I found children belonging to three families in the same kitchen as the infected children of another; but there is no law under which such careless parents can be reached.

Fifty-eight of the Eckington cases occurred in connection with the Mosbro' School during the last three months of the year, 44 being in November. I visited the school on November 14th, and examined the 403 children present, when I found three members of one family and another child desquamating freely. The parents of these children were prosecuted for failure to notify the cases and exposure of persons in an infectious state, but though the offences were of a gross character, fines of only 2/6 and costs were imposed for each offence in both cases. Prosecutions earlier in the year for similar offences in Renishaw resulted in the imposition of fines in two cases of 2/6 and 5/- and costs for failure to notify, and 2/6 and 5/- and costs for the exposure of infectious persons.

Cases occurred in Hasland throughout the year, 26 being reported in the last three months. Many of the North Wingfield cases were near the Hasland boundary, but a comparatively large number occurred at Waterloo.

Many of the Staveley cases appeared to be in connection with Poolsbrook School, where I examined 236 children on December 19th, and found one suspicious case, subsequently notified by a medical man.

The number of cases in Stretton was very large in proportion to the population. They were mostly in connection with the School, where I examined the children on June 29th, and found one child in an infectious condition. The exclusion of this child checked the progress of the disease for a short time, but a recrudescence took place during the summer holiday.

Many cases besides those mentioned were unnotified, but as the parents appeared unaware of the nature of the disease, were not reported to you for prosecution.

Diphtheria and Membranous Croup.—Houses infected, 57; cases, 71; deaths, 10. The number of cases was more than double the decennial avarage of 30, but the mortality per 1,000 living was only ·13, as compared with the average of ·15.

More than half the cases occurred in Staveley Town. The

disease cannot be described as being of a mild type, for the casemortality was at the rate of 14 per cent., notwithstanding the free use of diphtheria antitoxin.

This antitoxin was distributed free of charge throughout the year for prophylactic purposes, and during the last two months of the year for curative purposes. It was necessary to obtain the permission of the Local Government Board before the latter could be done.

Enteric or Typhoid Fever.—Houses infected, 36; cases, 45; deaths, 9. More of the cases than usual were of a doubtful nature, but I accept all notifications as correct.

Twelve of the cases were due to direct or sick-room infection; 3 occurred on insanitary premises; and 30 were doubtful cases or due to unknown causes.

More than a third of the cases occurred at Arkwright Town, in the parish of Sutton-cum-Duckmanton, where at least 7 of the cases were due to direct infection. I visited all the infected houses, but found all surroundings sanitary.

Houses in Arkwright Town, Eckington, and Staveley were constituted hospitals under the Isolation Hospitals Act, and nurses supplied by the North Derbyshire Hospital Committee.

Erysipelas.—Houses infected, 67; cases, 67; deaths, 2. The numbers of cases and deaths were below the average.

Puerperal Fever.—Houses infected, 7; cases, 7; deaths, 2. The number of cases was slightly above the average, and the number of deaths slightly below.

These cases are now inquired into under the Midwives Act by the authority responsible for the administration of the Act (in our case the Derbyshire County Council), the Medical Officer of Health of the district affected making the inquiry. This entails the making out of a formal report on each case. Even before the passing of the Act, it was my invariable practice to visit and inspect all premises on which one of these cases occurred; and to make inquiry as to the cause of it; and give all necessary instructions to the midwife.

Bacteriological Examination.—Swabbings from 35 patients were sent to Birmingham University under the arrangement made by the County Council, where 33 were found to

contain diphtheria bacilli. One of the others gave negative, and the last doubtful results. Thirty-three were sent from Staveley.

Specimens of blood were sent from two enteric fever patients, one of which gave positive and the other negative results.

Hospital Accommodation.—The Morton, Dronfield, and Mastin Moor Hospitals were opened on the 28th, 29th, and 30th of December respectively. They are the property of the North Derbyshire Hospital Committee, which consists of representatives of the Blackwell, Chesterfield, Clowne, and Norton Rural District Councils, and the Bolsover, Clay Cross, and Dronfield Urban District Councils, whose districts they serve. The hospital charge to constituent authorities is 2/- a day for each patient.

Each hospital provides accommodation for 17 scarlet fever patients, 2 paying scarlet fever patients in private single-bed wards, and 4 other patients. Each has also an administrative block, a laundry, disinfecting chambers and a discharging room, ambulance and bedding-van sheds, stable and mortuary.

Under an agreement with the Chesterfield Joint Hospital Committee, either Committee can send patients from its district to the hospitals of the other, provided that at least six beds are left available for the patients from the district to which the hospital belongs. The charge for this is 3/- a day for each patient. There is a clause in the agreement under which it can be temporarily suspended if either Committee has reason to fear an epidemic.

Morton Small-pox Hospital was pulled down during the year and a portion of it re-erected at Spital Hospital, where there is now accommodation for 34 patients. The Chesterfield Joint Hospital Committee has accommodation for 22 more.

Measles was present in the district throughout the year. The northern parishes suffered less than others, which was to be expected, most of the susceptible children having had the disease in the previous year. There were two epidemic periods in Brimington, but probably a few cases happened between them and kept the disease alive in the parish.

Measles not being compulsorily notifiable, and frequently being spread before the rash appears, is little subject to control except by school closure, which often resembles locking the stable after the steed has been stolen.

The death rate was below the decennial average.

Whooping Cough was less prevalent than in most recent years, the mortality being only about half the average. As it is not compulsorily notifiable, most of the non-fatal cases escape my notice.

Eleven of the 14 deaths were those of infants.

Preventive Measures.—The special measures taken as to small-pox are mentioned in the account of that disease.

All houses at which cases of infectious disease were reported were visited and inspected. Inquiry was made as to the causation of the disease, and instructions given to prevent the spreading of it. Printed instructions were also left. Each infected house was disinfected at the end of the illness.

Schools which appeared connected with outbreaks were visited, and the scholars examined, or the school closed, according as the one or other step appeared advisable. Handbills concerning scarlet fever, couched in simple language, were distributed by means of the scholars at Bond's Main, Mosbro', Poolsbrook, and Handley (Stretton) Schools; and concerning measles by the children attending Arkwright Town, Bond's Main, Brimington, Calow, Holmewood, Mastin Moor, Poolsbrook, and (Staveley) Woodthorpe Schools. Handbills on the treatment of whooping cough and the precautions necessary to prevent its spread were distributed by the children at Hallfield Gate School, in the parish of Shirland and Higham.

Disinfectants were supplied to those who called for them at the Inspectors' houses, that for enteric fever being a concentrated solution of perchloride of mercury, coloured with aniline blue, and given an unpleasant odour by spirit of wood naphtha.

Closure of Schools.—I found it necessary during the year to advise the closure of the following-named schools on account of the prevalence of measles in connection with them:—Stanedge, Ashover, from February 23rd to March 21st; the Infant Department of Brimington Council School from May 18th to June 20th, and again until July 4th; Arkwright Town from May 19th to June 20th, and again until July 4th; Calow National from May 31st to June 27th, and again until July 11th; Poolsbrook, Staveley, from June 7th to July 4th, and again until July 18th; Woodthorpe, Staveley, from July 18th to July 28th, when the summer holidays commenced; Mastin Moor, Staveley, from August 30th to September 26th; Bond's Main, Temple Normanton, from September 30th to October 31st; Brimington from October 7th to November 7th, and the Infant

Department only for a fortnight longer; Tupton from December 16th to January 16th; and Holmewood, Heath, from December 20th to January 16th.

Handley School, Stretton, was closed on account of scarlet fever from July 11th to July 25th, when the summer holidays commenced; and Upper Town School, Ashover, from November 25th to December 5th, for inquiry.

Diarrhœa was returned as the cause of 72 deaths, and enteritis of 30 more. The decennial average for diarrhœa is 45.

Frequent showers of rain by laying the dust, which contains enormous numbers of putrefactive organisms, and by cooling the air and soil, retard the development of this disease. It is therefore not a matter for surprise that the deaths from diarrhea and enteritis increased from 79 to 102, when it is remembered that the number of days in June, July, August, and September on which rain fell at Chesterfield Gasworks, which are about the centre of the district, was only 30, as compared with 53 in the previous year.

Tuberculosis.—Phthisis pulmonalis, or consumption of the lungs, caused 41 deaths, and other tubercular diseases 60 more. The averages of the previous ten years are 50 and 24.

The deaths from "other tubercular diseases" included 48 of children under five years of age, most of which were from disease of the bowels. This fact points to the probability that tuberculous milk was the cause of many, and is a strong argument in favour of the adoption and enforcement of bye-laws for dairies and cowsheds.

Acute Contagious Ophthalmia.—An outbreak occurred in Staveley, and probably affected some hundreds of persons. School children formed the majority of the sufferers, but many adults also acquired the disease, in most cases from using the same towels as younger patients. In two families, the mother and five children were affected; in another the mother and six; and in another the mother and ten children. The symptoms are a dislike or inability to look at light, redness of the eyes and lids, and a discharge from the lids. The eye-ball often appears of a pink colour, giving the disease its popular name "pink eye." It must not be confused with trachoma, the chronic ophthalmia often found in barrack schools.

Mr. Hutchinson called my attention to its presence at the National School on the evening of May 4th, and I visited the school next morning. Recognising the peculiarly acute form of the disease, I called in Dr. Snell in consultation, who confirmed my views as to the nature and seriousness of the outbreak. I therefore gave instructions as to precautions to be taken in connection with the school, and also issued handbills by means of the school children calling the attention of parents and guardians to the prevalence of the disease and its symptoms, and the precautions to be adopted. These were distributed not only in connection with the National Schools, but also from the Roman Catholic, Barrow Hill, Mastin Moor, Woodthorpe, and Arkwright Town Schools, so as to form a kind of "cordon" round the affected area.

These measures were successful in checking the spread of the disease, which quickly subsided, though a few cases occurred from time to time afterwards.

Water Supply.—The accompanying table shows the sources of water supply and the approximate number of houses supplied at the middle of the year by public mains and private service.

The Basshouse tank at Ashover, fed by a spring from the millstone grit, has a capacity of 15,000 gallons. The Press reservoirs, three in number, have a capacity of 25 million gallons and a catchment area of 500 acres. Ramsley reservoir has a capacity of 18 million gallons and a catchment area of 129 acres; while the Little Barbrook reservoir, which overflows into it, has a catchment of 281 acres. It also receives the flow from a spring. The Crowhole reservoir has a capacity of 25 million gallons and a catchment of about 1800 acres, while it also receives the overflow from the higher reservoirs.

The new Barbrook reservoir in course of construction has a catchment area of 1038 acres, and was intended to hold about 70 million gallons, but the excavation of a large quantity of peat on its site will largely increase its capacity, which will be close on 100 million gallons. This should be more than sufficient for many years, even when the present privy-midden system is superseded by water carriage.

I bring forward the question of water supply in my annual report on the health of the Borough of Chesterfield, and suggest that if it be necessary for the Gas and Water Board to look for a further sapply, it would be as well to come to an arrangement with you for it, which you could well furnish without danger to the district.

The Linacre reservoirs, which supply important parishes in the district, have storage room for 126,300,000 in the upper, and 32,357,000 gallons in the lower reservoir. A third reservoir, to hold 64,000,000 gallons, is in course of construction; as are also filters.

Bond's Main, Temple Normanton, is supplied from springs in the pit shaft; and Arkwright Town, Sutton-cum-Duckmanton, from the tunnel on the Lancashire, Derbyshire, and East Coast Railway. Some houses in Wingerworth are supplied from the estate reservoir.

A great and pressing need of the district in the matter of water supply is the provision of filters. Every year I receive complaints as to the quality of the water, and all kinds of illness, from the epidemic jaundice of two years ago to diarrhœa, have been attributed to it. Though these complaints cannot be justified in this respect, for the water is perfectly wholesome, they are fully so as to its appearance, and occasionally its smell. The latter was very marked at the end of September and in October, when it had a fish-like odour from the presence in it of decaying algæ and other vegetable matter. Pressure filters which could be fairly easily placed on the mains would remove this cause of complaint.

An extension of main in Tapton is most desirable.

Lead Poisoning.—Several cases were reported to me during the year, and I found on examination that they were genuine ones.

The fact that the water as supplied in house services will take up lead, though it shows no acidity when tested with lacmoid solution, points to the necessity of further treatment than the passing of it through lime filters, or the addition of Paris white to the water in the reservoirs. No doubt these measures do some good, but the water should be rendered slightly alkaline by the adoption of some such system as is used at Redmires or the addition of sodium carbonate as at the Wakefield Corporation Waterworks. In the Supplement to the Thirtieth Annual Report of the Medical Officer to the Local Government Board, Dr. Houston writes respecting the last:—"Five hundred gallons of a strong solution of soda (about 1lb. per gallon) are mixed with one million gallons of acid water. The result is

"very satisfactory, as the water after treatment no longer acts on lead, and is slightly more than neutralised. As regards erosion of lead, to be more fully dealt with in a future report, it may be added that while the 'untreated' water possesses strong erosive ability, the 'treated' water is not only cured in this respect, but is placed, as it were, in a state remote from the possession of erosive ability. No other form of 'treatment' appears to confer this property on water in an equal degree.' The italics are mine.

Sewage Disposal.—The bacteriological system in operation at the various new Sewage Disposal Works depends for its success on the deposition of insoluble and mineral matter in detritus tanks, the liquefaction of suspended and dissolved putrescible substances in septic tanks, and the passing of the resulting decomposed sewage through filters, on which it can be distributed in a number of ways. The one usually adopted in the district is by revolving sprinklers.

Local Government Board Inquiries were held at Brimington on February 9th, by Colonel Coke, R.E., concerning an application for power to borrow £2,951 for purposes of sewage disposal, and at Hasland, on May 10th, by Mr. Fawcett, with regard to the sewering and provision of sewage disposal works for Penmore and vicinity.

Scavenging is done under contract by scavengers in most of the Parishes, and particulars may be found in the appended Reports of the Inspectors. In some Parishes, owing to unsatisfactory tenders, it has been done under the supervision of the District Inspector, who has engaged labour for the purpose, with the result that a considerable saving has been effected.

I called attention in my last annual report to the dangerous and disgusting practice of throwing the filth from privies and ashpits on the roadway, from which it is thrown into a cart. It is not necessary that the road should be defiled in this manner. Folding boards could be carried on which the refuse could be placed without leaving traces for weeks as at present.

Private Streets Works Act.—The adoption of this for New Street, Grassmoor, and adjoining streets, and the resewering that has taken place in connection with it, should prove unmixed blessings from a sanitary point of view, and bring their reward in the shape of the improved health of the neighbourhood. Dairies and Cowsheds.—No register of these is kept, as the law requires.

A Committee was appointed to draw up bye-laws, which were printed and distributed among the members of the Council, but referred to the Committee at the Meeting on December 24th. The objection raised against them was the placing of the onus of structural alterations on the tenant instead of the owner. This was as in the Model Bye-laws of the Local Government, and quite in the usual form. I have made inquiry, but have not been able to hear of a case in any district in which the owner took advantage of this to make the tenant do the work.

It is highly desirable that bye-laws should be passed. They would not deleteriously affect Cow-keepers who keep their premises in proper order, but would bring those with dirty or insanitary premises into line with the others.

Slaughter-houses.—These were inspected and found satisfactory on the whole. I found one in Mosbro' in an insanitary condition, but notice was served on the owner to put matters right.

The proposed bye-laws for the regulation of these and the abatement of nuisances, shared the fate of those for dairies and cowsheds at the same meeting.

Food and Drugs Acts.—These are administered by the County Council, whose Officers took many samples for analysis. Samples of new milk were taken on Sundays by your Officers on several occasions, and sent to the County Analyst. One successful prosecution followed.

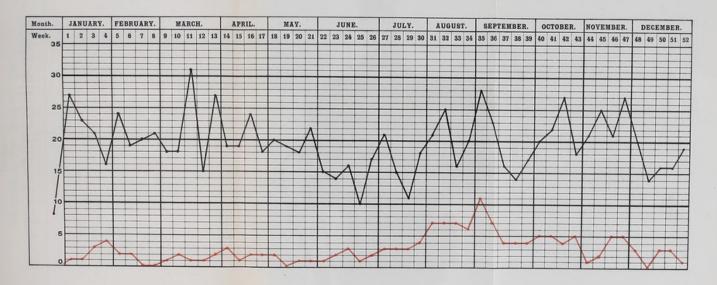

Factories and Workshops.—The reports to me of the Inspectors are presented to you with their other annual reports.

Appended are:

- A Chart showing the Gross and Zymotic Mortality during each week of the year.
- (2) A Meteorological Table.
- (3) Mr. E. S. Robinson's report for the No. 1, or Southern District.
- (4) Mr. Hutchinson's report for the No. 2, or Staveley District.
- (5) Mr. Attenborough's report for the No. 3, or Eckington District.
- (6) The annual report on Canal Boats.

				Total		429

The Cleansing of Ashpits is let to contractors at per house per annum in Ashover, Hasland, Heath, North Wingfield, Pilsley, Shirland and Higham, and Tupton.

Slaughter-houses.—There are 34 Licensed Slaughter-houses. All have been inspected at intervals and were found clean and wholesome.

Disinfection.—159 Dwelling-houses have been disinfected.

Cowsheds and Dairies.—There are no registered Cowsheds, Dairies or Milkshops. A good many Cowsheds and Dairies have been inspected and, as a rule, found well kept and clean.

New Dwelling-houses. — There have been 85 new dwelling-houses erected during the year.

Return of Plans Submitted.

REPORT OF THE INSPECTOR OF NUISANCES FOR THE No. 2 OR STAVELEY DISTRICT.

To the Chairman and Members of the Chesterfield Rural District Council.

GENTLEMEN,

I have much pleasure in submitting my Report of the work done in the Staveley District during the year 1904.

The said District comprises the Parishes of Barlow, Brimington, Coal Aston, Dronfield Woodhouse, Holmesfield, Staveley, Tapton, and Unstone, embracing an area of 22,129 acres.

The following Table will show the number of Notices served in each Parish, and the work that has been done for the abatement of Nuisances.

Parish.	Notices Served.	New Privies Built.	New Ashpits Built.	Privies Repaired.	Ashpits Repaired.	Defective Drainage.	Gully Traps put in.	Water Closets put in.	Urinals Repaired.	Overcrowding Abated.	Houses Closed.	Other Nuisances.
Barlow	5			6	3							4
Brimington	23	8	5	14	10	3	6	5	I	2	I	7
Coal Aston Dronfield Wood-	9	3	4	5	2	2	3					3
house	10000	2	3	8	5	3	8		I	2		4
Holmesfield												
Staveley	38	17	9	21	13	16	9	3	2	3	2	13
Tapton	2					I	1					I

House Scavenging.—The following table will show in which parishes house refuse is removed by the Council, together with the price paid, and cost for the year:—

Parish.	£	s.	d.	How Contract is Let.	Period of Contract	When Contract Expires.		t for ear.
Brimington, North Brimington, South Coal Aston Dronfield Woodhouse	0 0 0 7	4 4 3 0	4 1 6 0	per house per house day work per house per annum	3 years. 3 years. 3 years.	Oct. 3rd, 1905 Feb. 22nd, 1906 Feb. 22nd, 1906 Nov. 1st, 1906 Oct. 3rd, 1905	99 15 34	10 0 6 10 16 10 0 0 6 0 0 0

On the whole the work has been carried out in a satisfactory manner, a post card to the contractors or verbal notice being all that has been necessary.

Slaughterhouses.—There are 13 slaughterhouses in the district, viz.: Barlow 1, Brimington 3, and Staveley 9. These have been visited regularly, and were found to be kept in a cleanly manner.

Dairies and Cow Sheds.—There is no register kept for dairies, cow sheds, or milk shops, but a large number in the district supply milk to the general public. The cow sheds of these have been visited at intervals, and were usually found to be kept clean.

Factories and Workshops.—There are 49 places upon the register under the Factory and Workshops Act, 1901, in the several parishes, as follows: Barlow 3, Brimington 13, Dronfield Woodhouse 2, Holmesfield 1, Staveley 25, Tapton 1, and Unstone 4. Inspections have been made. No complaints could be made as to cleanliness, ventilation, or overcrowding. A number of sanitary conveniences have been erected by one firm in the parish of Staveley.

Disinfection.—The following table will show where houses have been disinfected after infectious disease:—

Parish.	Small-pox.	. Enteric Fever.	Scarlet Fever.	Diphtheria	Total.
Barlow			1	1	2 35
Brimington		4	30	1	35
Holmesfield			1		1
Staveley	1	3	32	18	54
Tapton			- 3		3
Unstone			7	1	8
Total	1	7	74	21	103

RURAL DISTRICT COUNCIL OF CHESTERFIELD.

No. 3 (or) ECKINGTON DISTRICT.

To the Chairman and Members of the Chesterfield Rural
District Council.

GENTLEMEN,

I have great pleasure in submitting to you my Third Annual Report of the work done in the above District during the year 1904, as your Inspector of Nuisances, Lodging Houses, and Canal Boats.

The District comprises the parishes of Beighton, Killamarsh, and Eckington, having a total area of 11,671 acres, and an estimated population of 20,507.

Removal of House Refuse, &c.—The whole of the work in connection with above is done by seven contractors, and during the year has given general satisfaction. The disinfecting powder is supplied by you.

The following table shows the names of the Contractors in No. 3 District, and other information:—

Parish.	Ward or District.	Name of Contractor.	No. of Houses, &c.	Amount per House per Annum.	Tips provided by	Name of Owner.
Beighton Eckington	Eckington Mosbro' Renishaw Ridgeway	J. Spencer G. Bennison J. Smith W. Rose W. Seaton	827 304 517	5/- 3/6 5/- 5/-	Council Do. Do. Contractor Do.	Mr. J. Jubb Sir Geo. Sitwell Mr. Jno. Lee
Killamarsh	Upper Lower	J. Carr C. Gascoigne	502 360	6/- 6/2	Do. Do.	

Infectious Disease.—The following table shows the number of cases of Infectious Disease and other information:—

Nature of Disease.	Beighton.	Eckington August Ward.	Mosbro' quanta Ward.	y.		Total Eckington Parish.	Killamarsh.	Removed to Hospital.	Total for District,	Houses Fumigated.
Scarlet Fever	40	20	65	0	9	94	6	0	140	132
Diphtheria	0	2	. 1	0	1	4	4	0	8	5
Enteric Fever	0	3	1	0	0	4	0	0	4	4
Puerperal Fever	0	1	0	0	0	1	0	0	1	1
Erysipelas	4	2	2	3	0	7	0	0	11	0 2
Small-pox	0	0	. 0	0	2	2	0	2	2	2
Total	44	-				112	10	2	166	144

The two cases of Small Pox (children) were removed to the Isolation Hospital, and the houses were fumigated. The bedding and other articles likely to retain infection were removed to Chesterfield and disinfected by steam.

The Infants' Department of Renishaw School was fumigated in connection with these cases of Small Pox, both children having attended in that department.

At the beginning of December I fumigated the Mosbro' School, which had been closed owing to the prevalence of Scarlet Fever.

Return of Notices served in each Parish.

	Parish.		No. of Notices.
Beighton		 	15
Eckington		 	103
Killamarsh		 	25
Total		 	143

Cowsheds, Dairies, and Milkshops.—There are no Milkshops in the District, and as no Register is kept, systematic inspection of the numerous Cowsheds is difficult, although several have been inspected, and found clean and in a sanitary condition, whilst others are structurally unfit for their present purpose, which makes it difficult for the occupier to keep his cowshed in as cleanly a condition as he might wish to do.

During the year I served notices on two Cowkeepers, prohibiting them from employing persons who had been in contact with Infectious Disease, viz., Scarlet Fever, until in each case all danger therefrom of the communication of infection to the milk had ceased.

These notices were complied with immediately on receipt by the cowkeepers.

I trust the Bye-Laws relating to Cowsheds, &c., which are under consideration at present will be in force during the next year.

Common Lodging-House.—The only one in the District, situate at 102, High Street, Eckington, contains 8 bed and 2 day-rooms, and is registered for 26 adults and 1 child. It has been inspected regularly, and has always been found in a cleanly condition.

No infringement of the Bye-Laws has been found, and no case of Infectious Disease has been reported.

Slaughterhouses.—There are at present 31 Slaughterhouses in use and occupation. These have been visited regularly, and as a rule were found clean and well kept.

Two surrenders of diseased carcases were made during the year—one the carcase of a cow which was affected by generalised tuberculosis, and a carcase of a pig, which was affected by jaundice. These were taken before one of H.M. Justices of the Peace, and orders obtained for their destruction.

Eckington Market.—This Market, which is held weekly, on Friday afternoon and evening, has been inspected each week, and the meat and other articles of food exposed for sale have been examined and found fit for human food.

Sale of Food and Drugs Acts.—On Sunday morning, February 28th, accompanied by Mr. F. Vickers (Cert. San. Insp.) I purchased five samples of new milk in Killamarsh, which were submitted to the County Analyst. Proceedings were taken against one vendor.

I also purchased 5 samples of new milk and 1 of skimmed milk in Beighton on Sunday morning, May 1st. These were also submitted to the County Analyst, but proceedings were not taken against any of the vendors.

Factories and Workshops Act.—The following shows the number and nature of the above in the District:—

				Parish		
1904.		Beighton.	Eckington.	Killamarsh.	Total.

ANNUAL REPORT ON CANAL BOATS.

To the Chairman and Members of the Chesterfield Rural
District Council.

GENTLEMEN,

The Chesterfield and Stockwith Canal is little used. Few boats get nearer to Chesterfield than Renishaw, and none nearer than Staveley.

Frequent visits were made to the canal, but only three boats were met with, all in No. 3 District. These were inspected, and found to be clean, dry, and in good repair. There were no infringements of the Acts and Regulations, nor were any cases of infectious disease reported or discovered.

We are, Gentlemen, Your obedient Servants,

HERBERT PECK,

Medical Officer of Health.

JAMES HUTCHINSON, Inspector for No. 2 District.

HARRY ATTENBOROUGH, Inspector for No. 3 District.
