Telephone No: Clacton 25501.

To the Chairman and Members of the Clacton Urban District Council.

Mr. Chairman, Ladies and Gentlemen,

I have pleasure in presenting the Annual Report on the state of Public Health in the Urban District of Clacton for 1971.

The Registrar General's figures for population show an increase in the Urban District of one thousand nine hundred and sixty for the year 1971. This is a considerably greater annual increase than in previous years. The provisional 1971 census figure is 37,942, sixty-two more than the Registrar General's estimate.

The birth rate for 1971 is down on last year at 14.2 by just over one point and below the national figure of 16.0. The number of illegitimate births for 1971 has declined.

The corrected death rate is also less than last year at 11.2, a little lower than the national figure of 11.6 and the infant mortality rate is less than eight points below the national figure of 18.

Consideration of the table showing causes of death confirms that heart disease remains the commonest cause, and that there has been just a noticeable fall in the number of fatal cases of cancer. There were 44 deaths from lung cancer including 35 males.

A marked decline in the number of notified cases of infectious disease is due mainly to the diminished occurrence of measles, it is hoped on account of the introduction of anti-measles vaccination, although this disease still tends to follow its customary biennial pattern. No cases of food poisoning were recorded.

Attendance at the County Clinics remain satisfactory and 2,186 children were immunized against communicable disease. Details are given elsewhere in the report.

During the holiday season the first aid post at Jaywick

dealt with 805 cases, at Queensway 704, and at Pier Gap 647 together with 200 lost children, a total of 2,156 persons.

The water supply remains satisfactory in both quality and quantity. For the first time in many years the consumption has been reduced by 1.21 million gallons to 662.125 million. Full details of the various analyses are given elsewhere in the Report.

Following the resignation of the Council's Housing Manager, Mr. F. W. Turner, the Council determined at its meeting on the 7th July 1971 that the Housing Department be amalgamated as a section with the Public Health Department and Mr. E. Hall a Senior District Public Health Inspector who had, some years previously, served another Council as Housing Manager, was subsequently appointed Housing Manager for the Clacton Urban District.

The arrangements suggested by the Clerk of the Council and later adopted by the Council have proved satisfactory in operation.

In conclusion, I would like to express my gratitude to the Council, the Public Health Committee, and the Officers of the Council for their co-operation during the year. To the Staff of the Public Health Department my thanks for their excellent work and a welcome to Mr. King who took up his duties as District Public Health Inspector in September.

I am,

Your obedient Servant,

R. A. STENHOUSE, and Topo

Medical Officer of Health.

NATIONAL ASSISTANCE ACT, 1948

NATIONAL ASSISTANCE (AMENDMENT) ACT, 1951

Under the provisions of these Acts the Council, through its Medical Officer, is empowered to seek the removal of necessitous cases to a hospital or institution.

No action was required during 1971.

One aged person - Admitted to Hospital.
One aged person - Referred to Home Help Service.
Three aged persons - Referred to Health Visitor.
One person - House cleaned.

One person - Referred to Social Services.

Bacteriological	Private	-121-101	no odt 140 totak

These results are worse than last year, but once again contaminated taps proved to be the trouble. Two of the unsatisfactory samples were from taps over sinks in food premises, indicating the need for those in charge of food premises to pay particular attention to the cleanliness of taps.

Also see report, page 13.

(b) DITCH WATER

6 samples of ditch water were submitted for bacteriological examination for possible sewage contamination. All proved negative.

Because of a serious depletion in staff during the holiday season the number of samples taken this year was less than usual, so that any satisfaction from the improved percentage of satisfactory samples must be a qualified satisfaction.

(f) FOOD SAMPLES EXAMINED BY PUBLIC ANALYST

- 1. Sausages. Tuft of pigs bristle in sausage meat.
- 2. Buttered Rolls. Contained rodent excreta.
- 3. Part Baked Bread. Mouldy.
- 4. Cheese. Mouldy.
- 5. Custard Tart. Contained rodent excreta.
- 6. <u>Chocolate Caramel Wafer</u>. Blowfly loosely attached to chocolate covering.
- 7. Jar of Pickled Gherkins. Mouldy.
- 8. Hot Cross Bun. Contained a metal fragment.
- 9. "Crusty Bread" Loaf. Small mass of discoloured oily dough containing traces of iron.

- 10. Cream Cake. Mouldy.
- 11. Cheese Spread. Mouldy.
- 12. Bacon and Egg Pie. Mouldy.
- 13. Plaice Fillets. Contained five live blow fly larvae.
- 14. Jar of Mincemeat. Glass fragment in jar.
- 15. <u>Starch Reduced Rolls</u>. Infested with Biscuit Beetle (Stegobium Paniceum).

The Council decided to prosecute in the cases of numbers 2, 3, 10, 12 and 15, send warning letters in the cases of numbers 5, 8, 9 and 11, and take no action with reference to numbers 1, 4, 6, 7, 13 and 14.

Also warning letters were sent to traders in the cases of numbers 19, 20, 27, 28, 29 and 30.

Numbers 21, 22, 24, 25, 26 and 31 were either referred to traders, back to complainants or adjoining districts.

No action was deemed necessary in other cases.

- 16. Hovis Loaf. Contained white dough.
- 17. Cake. Received too late for any action.
- 18. Jelly. Flies in jelly not substantiated.
- 19. Steak and Kidney Pie. Fly in meat at restaurant table.
- 20. Self Raising Flour. Contained flour mites.
- 21. Rock Eel. Taste of bleach on fish.
- 22. Cream Doughnuts. Grease found in cream.
- 23. Fish. Tasted "off". None available for analysis.
- 24. Yoghurt. Fermentation.
- 25. Cod Fish. Contained fibaria bicolor worms.
- 26. <u>Tin of Tomatoes</u>. Internal lacquer suspect.
- 27. <u>Jar of Jam</u>. Contained piece of broken glass.
- 28. Jar of Jam. Mouldy.
- 29. Dirty Milk Bottle. Had contained a firework.
- 30. Packet of Oatmeal. Larvae frass in oatmeal.
- 31. Frozen Fish. Caused severe diarrhoea.
- 32. Beefsteak Pie. Mouldy.

SANITARY CIRCUMSTANCES OF THE AREA

WATER SUPPLY

662.125.000 gallons were supplied during 1971 by the Tendring Hundred Waterworks Company from their Dedham Pumping Station, with some assistance from the Company's subsidiary sources at Lawford, Great Bentley, Stratford St Mary and Higham.

The average daily consumption is 1.814.000 gallons.

Quantity used for domestic purposes Average daily consumption 482.516.000

Quantity used for trade purposes Average daily consumption

179.609.000

1,482 yards of new main were laid in this district during the year.

The supply of water to the district has been satisfactorily maintained both in quality and in quantity.

Samples of raw water are taken monthly; these are generally for chemical analysis only.

Monthly samples at each station are taken after aeration and chlorination and for these both the chemical and bacteriological results are given in the analyses below.

In addition to the above, samples are also taken bimonthly of all water stored in the Company's reservoirs, tanks and water towers. The samples are submitted for bacteriological examination only. The average fluoride content is 1.0 to 1.5 p.p.m. There is no evidence of plumbo-solvent action.

At the pumping stations where continuous chlorination is carried out, a test of the chlorine residual is made once per shift (i.e. every 8 hours) a residual of 0.2 p.p.m. of chlorine is maintained. If the chlorine residual falls below this figure the water is re-tested and if still low, the chlorine dose is raised to give the required residual. This happens very rarely.

If samples taken from storage show high bacterial counts, then a repeat sample is taken and submitted to Dr. G. U. Houghton at the South Essex Waterworks Company's laboratory at Langham for presumptive test, the results of which are known within 48 hours. If the high count is confirmed the storage reservoir etc. is taken out of service while the contents are thoroughly sterilized with a fairly high dose of chlorine. This is done by injecting chlorine at the booster pump delivery and circulating the water through the reservoir on a closed circuit. The reservoir is then allowed to stand until the chlorine residual has returned to normal and is only brought into service again after another sample has been submitted for bacteriological examination and has been proved satisfactory.

17,271 premises in the Urban District received a supply of piped water.

Parts of Jaywick and the Caravan Camps are supplied by means of 380 standpipes.

The summer population is approximately 80,000.

REMARKS

These samples are practically clear and bright in appearance and have a reaction on the alkaline side of neutrality and are free from metals apart from a minute trace of iron. The water is hard in character but its hardness and its content of mineral and saline constituents in solution are not excessive. It conforms to the highest standard of organic quality and bacterial purity.

These results are indicative of a water which is pure and wholesome in character and suitable for public supply purposes.

All samples were analysed by the Counties Public Health Laboratories.

SANITARY ADMINISTRATION

The following is a synopsis of the principal work carried out by the Public Health Inspectors during 1971:-Inspections (Public Health and Housing Acts) Other Inspections Informal Notices served Informal Notices complied with 66 Formal Notices served Formal Notices complied with The following are the principal improvements obtained:-HOUSES Defective roofs 1 Defective plaster of walls and ceilings 1 Other defects DRAINAGE Stopped drains ... 31 Defective sink, waste pipe, etc. CLOSETS Fittings defective OTHER NUISANCES Other outside defects 15 DUSTBINS Defective or insufficient

DRAINAGE AND SEWERAGE

During 1971 two schemes have been completed to eliminate flooding of residential properties owing to surcharging of combined sewers.

In London Road the works were in two parts. A system of surface water sewers was provided to reduce the flow in the combined system whilst a relief soil sewer was provided to cope with such surface water that gets into the system but cannot economically be removed.

In Colthorpe Road it was possible to remove a very high proportion of the surface water getting into the combined system by providing surface water sewers in Thorpe Road and Oakleigh Road. These sewers were designed to cope with the flow from any further development in the area.

In the latter part of the year work started on the provision of new surface water sewers in the Beach Road area and in Old Road between Valley Road and Coppins Road.

As a result of the requisite ballots, the orders were made (i) extending the general closing hours (June - September inclusive); (ii) suspending the obligation to have an early closing day (June - September inclusive); and (iii) extending the list of articles which may be sold on Sunday (18 Sundays).

There was no evidence of shopkeepers taking very much advantage of the order extending the general closing hours, and the trend of results of the ballot regarding Sunday Trading suggests that the requisite majority may not be forthcoming in the near future.

BATHING POOLS

Bathing pools are provided by five of the private companies catering for holidays and other pools have been provided at the County High School and Ogilvie School.

- (a) Two pools; one indoor (180,000 gallons) and one outdoor (260,000 gallons) are interconnected. The pools are fed by the town mains, and the main purification treatment is by chlorination. Provision is made for heating the water. There is a complete change of water every ten hours.
- (b) One pool; open-air, fed by the town main supply, the purification being by chlorination. It holds 60,000 gallons. When necessary, water heating is by gas.
- (c) One pool; open-air, fed by the town main supply purification is by chlorination. It holds 142,000 gallons.
- (d) One pool; open-air, fed by the town main supply; the purification by chlorination. It holds 40,000 gallons.
- (e) One pool; indoor; fed by the town main supply; purification by chlorination. It holds 45,000 gallons.
- (f) One pool; outdoor, fed by the town main supply; purification by chlorination. It holds 8,750 gallons.
- (g) One pool; indoor, fed by the town main supply; purification by chlorination. It holds 6,000 gallons.

- 9 samples of water were submitted from the five bathing pools in the District for bacteriological examination. 8 were satisfactory; 1 sample unsatisfactory.
- 9 Residual Chlorine Tests were carried out: 8 were satisfactory and 1 unsatisfactory.

CARAVAN AND CAMPING SITES

Twelve Camping Sites and one Residential Site are licensed.

One licence was issued for a tented camp.

21 Inspections at camps and individual moveable dwellings.

The licences are for 33 residential caravans, 2,981 holiday caravans, 358 chalets and 49 tents.

Shortage of staff during the holiday season inevitably resulted in less time being given to inspections at the caravan and camping sites. Fortunately, very few complaints were received from members of the public using the sites.

NOISE ABATEMENT

124 Inspections.

Despite the shortage of inspectors during the year, the urgent nature of noise complaints led to more time being spent on this work than was really warranted. Not all the complaints were justified, and it must be wondered sometimes if the comparative peace of the district results in an ultrasensitivity to noise. Though many residents complain of the town being dead after the trippers go home in the early evening, others complain of evening noise arising from bingocalling, car doors slamming, etc. even in the town centre.

More understandable are some of the fears of aircraft noise which may result when Maplin Sands are developed for use as the Third London Airport. The extent of the noise will be affected, inter alia, by the position of the runways, which is still a subject for discussion.

ATMOSPHERIC POLLUTION

The atmospheric pollution station is situated in the Public Health Department at the Town Hall. The results obtained from the apparatus are submitted for evaluation to the Department of Scientific and Industrial Research at Warren Spring Laboratory, Hertfordshire.

OFFICES, SHOPS AND RAILWAY PREMISES ACT, 1963

Defects abar	ted												60	

Though it proved possible during the year to increase the number of general inspections, unexpected staff shortages for several months resulted in the routine work associated with the Act being given a lower priority, and so the final figures for the year were not so good as had been hoped.

There was a reduction in the number of accidents reported, but it would be unwise to place too great a significance on one year's statistics.

Other Foods	1,466
5,583 Vitamin Tablets	101 101 000

Total: 3 tons. 8 cwt. 24 lbs.

MILK SUPPLY

The milk supply for the Urban District is obtained from three Dairy Companies in the Area and one Dairyman whose premises are situated in the Tendring Rural District.

MILK AND DAIRIES (GENERAL) REGULATIONS, 1959

The following table sets out the number of Registrations in 1970:-

Dairies		5
Distributors of	of Milk	105

BAKEHOUSES

There are 8 bakehouses in the Urban District. None of them is an underground bakehouse.

25 Inspections were made during the year.

LEGAL PROCEEDINGS

A shop-keeper was prosecuted under the Foods and Drugs Act 1955, Section 2. A fine of £10 and costs of £10 were imposed.

A baker was prosecuted under the Food and Drugs Act 1955, Section 2. A fine of £75 and £10 costs were imposed. He was again prosecuted during 1971 and fined £75 with £10 costs, and warned that if he came before the Court again for a similar offence, he could well be in serious trouble.

Another baker was prosecuted under the Food and Drugs Act 1955, Section 2, but the Chairman of the Bench announced that there was a doubt in their minds and that the summons would therefore be dismissed.

A resident was prosecuted under the Civic Amenities Act 1967, Section 19. A fine of £5 and costs of £2 were imposed.

PUBLIC CLEANSING

REFUSE COLLECTION

Ten refuse collection vehicles are in regular use throughout the year and the number is increased to eleven during the busy holiday season.

As reported last year the work study based productivity bonus scheme was introduced in the early part of the year. Originally this scheme was to be given a trial period of three months, but after only two weeks the refuse collectors unilaterally called off the scheme.

This eventually led to a new scheme being prepared following additional work study, and this scheme will come into effect (D.V.) in the new year. Both the schemes prepared have been based on a reduction in man-power in the refuse collection service, but natural wastage and transfers to other council work would prevent any redundencies.

REFUSE DISPOSAL

The arrangements continued during the year whereby the town's refuse is delivered to the Tendring Rural District Council's site at Martins Farm, St. Osyth, for disposal by means of controlled tipping.

No progress was made towards the acquisition of our own disposal site and as the Government's proposals for local government reorganization (which will surely lead to the formation of a new authority embracing both Clacton U.D.C. and Tendring R.D.C.) are due to take place in April 1974, it seems unlikely that we shall be able to acquire a site in the remaining life-time of this Council.

The Essex County Council who are expected to take over refuse disposal functions under local government reorganization have organized Waste Disposal Panels in various parts of the County to facilitate the transfer of these functions. A good deal of useful preparatory work was done by the area panels and also by the countywide panel which was formed from members of the area panels.

It is understood that a certain amount of opposition exists to the refuse disposal functions being detached from those of refuse collection (which are to remain with district councils) and possibly the matter will not be decided till the final stages of the passage of the Local Government Re-organization Bill through parliament.

Nationwide concern has been expressed about the indiscriminate disposal of toxic wastes, and this too has been a subject discussed by the Waste Disposal Panels.

On a more local level, it is interesting to record that an ever-increasing use has been made of the Council's refuse dump provided at Rush Green in accordance with the Civic Amenities Act. At week-ends in particular, queues of motorists have been seen waiting to dump garden refuse, household furniture etc. A lot of this kind of refuse used to find its way on to roadside verges and vacant plots.

GULLY CLEANSING

The gully cleansing and cesspool emptying machine has again given good service to this council and also when on loan to a neighbouring council. In our own district, labour difficulties prevented our carrying out the gully cleansing service as often as desirable.

As a result of the work study based bonus scheme, the gully machine men will in future be employed on gully and cesspool work for 36 weeks in the year to give a twice-yearly emptying of gullies; for the rest of the year the men will be used on refuse collection duties.

Though there was no reduction in the number of cesspools during 1971, it is confidently expected that the provision of a sewer in Jaywick Lane will lead to a substantial reduction next year.

STREET CLEANSING

The bulk of the work of street cleansing is carried out by a Johnston Vacuum Cleaning Machine, a Harbilt electric lorry and three pedestrian controlled Harbilt electric trucks. For part of the year these machines are supplemented by one individual hand truck for use in the town centre.

Towards the end of the year, work study was carried out on parts of the street cleansing services and the rest will be done in the coming year. Consideration will need to be given to the desirability of increasing the sweeping schedule for certain parts of the town where at present the infrequency of cleansing has led to complaints.

It was felt that during the year under review people became a little more litter conscious, but it is sad to report once again that there has been no diminution in the nuisance arising from dogs fouling the pavements and public open spaces.

The Public Health Committee discussed the dog question

at great length and in conjunction with local Dog Traing Clubs sponsored a poster competition illustrating the association between this fouling by dogs and certain diseases.

With all the public attention on pollution, it seems obvious that only the fear of unpopularity at the polls has prevented a succession of governments from taking one obvious step to reduce pollution by a realistic increase in the cost of a dog licence. Even dog owners would agree that there are too many (other) dogs in this country.

PUBLIC CONVENIENCES

There are twenty-four public conveniences in the district, two of which are mobile conveniences used during the holiday season on the sea front near Queensway.

Once again it is pleasing to report that these mobile conveniences were well-treated by the public, the amount of vandalism being appreciably less than that in the other permanent conveniences. No firm conclusion can be drawn to account for this, but it is just possible that one significant factor is that no charge is made for their use.

The replacement of the "temporary conveniences" built immediately post-war at Lyndhurst Road and Brighton Road was again deferred for financial reasons.

The conversion to decimalisation and the use of the lightweight new peeny resulted in excessive trouble with the convenience locks, caused mainly by the coins jamming.

During the year the Public Health Committee resolved to provide special conveniences for the disabled at High Street, Westcliff and the Old Road Car Park conveniences. The use of electronic card-key locks was eventually decided on, and the special keys will be issued on loan to those needing to use the convenveniences.

One member of the Committee suggested a nationwide policy of special Yale-type locks for all the special conveniences on the lines adopted by the A.A. and R.A.C. for their telephone boxes, so that every disabled person would have a key to fit the special conveniences anywhere. For some reason the higher authority thought such a scheme impractical, but it still seems to have enough merit to warrant further consideration.

HOUSING MANAGEMENT

HOUSING ACCOMMODATION

At 31st December, 1971, the Clacton U. D. C. owned 980 individual houses, bungalows and flats and 136 garages. A further 58 bungalows are managed by the Council on behalf of the Greater London Council.

LETTINGS

During 1971, 82 units of accommodation were let to registered housing applicants whose housing need had been accorded priority by the Housing Committee; 6 were let to 'key workers' or to members of the Council's staff and there were 72 lettings as a result of transfers of tenancy or mutual exchanges of tenancy.

During the same period 2 G.L.C. bungalows became vacant and were let by the G.L.C. Housing Department. There were also five transfers of tenants from one bungalow to another. These transfers were to enable major structural repairs to be carried out.

WAITING LIST FOR HOUSING ACCOMMODATION

On 1st January 1972, there were 549 registered housing applicants, compared with 600 on January 1st, 1971 and 591 on January 1st, 1970. The relatively low number of registered applicants on January 1st of this year is due largely to the very recent completion of a review of the housing waiting list which had resulted in the cancellation of over 160 applications.

RENT COLLECTION

The total gross rental debit on January 7th 1972, was £4,690.91, compared with £3,836, £3,171 and £2,926 on the equivalent weeks of 1971, 1970 and 1969 respectively.

The total amount of rent arrears stood at £1,072.81 on 7th January, 1972 compared with £822.10.5 on the equivalent week of the previous year.

Rent arrears have increased steadily over the years and stood at a maximum of £1,300 on 13th September last. Since that date there has been a steady reduction in the total sum of arrears and at the present time these stand at approximately £960. There is every hope that this trend will continue.
