# CLITHEROE RURAL DISTRICT COUNCIL

OIT THE

HEALTH & SANITARY AD INISTRATION

OF THE DISTRICT

FOR THE YEAR

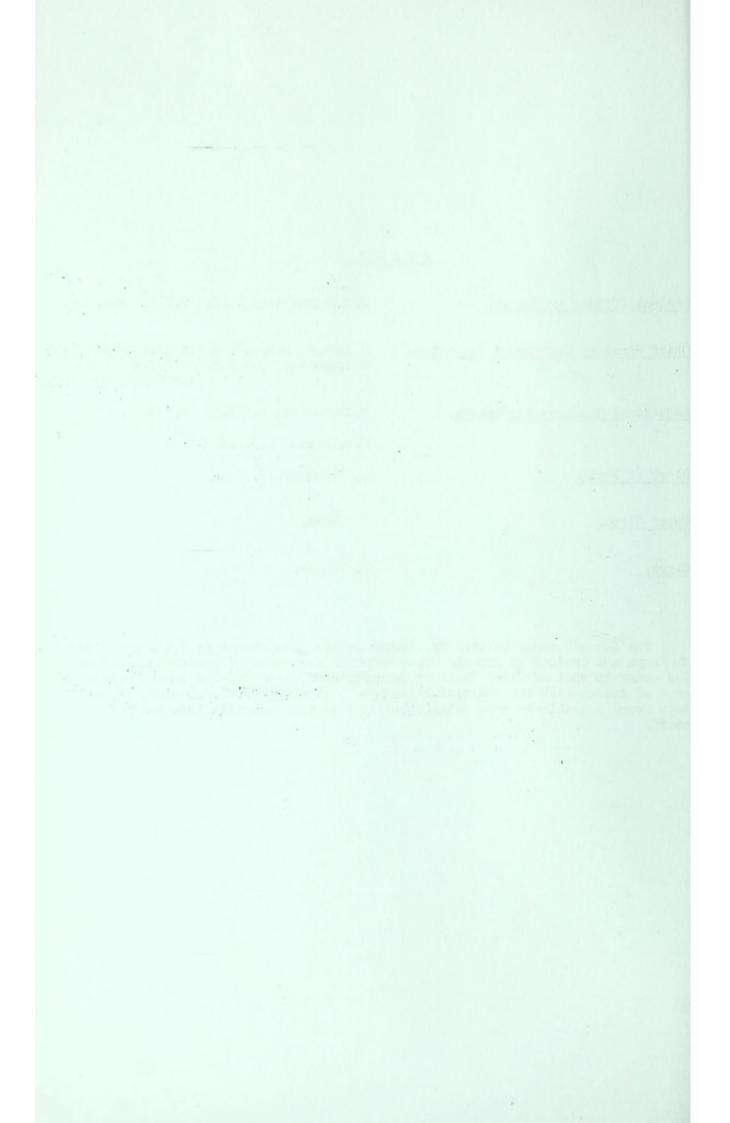

1955

( ... ELLE R. AL DISTRICT COUNCIL 11 ANNUAL REPORT 1925

#### STAFF.

Medical Officer of Health.	J.H.Fairweather, M.D., D.P.H., M.R.C.P.
Chief Sanitary Surveyor & Inspector.	H.Barton, M.R.S.H. until 31st August, 1955. H.Cockshutt, M.R.S.H., M.S.I.A., from 1st September, 1955.
Additional Sanitary Inspectors.	H. Cockshutt, M. R. S. H., M. S. I. A, until 31st August, 1955. M. C. Dawson, A. R. S. H.
Clerk of Works.	R. Tripycar.
Chief Clerk.	T. Scott.
Clerk.	J. Inghan.

The Council congratulated Mr. Barton on his appointment as Hygiene Officer in Kenya and decided to promote Mr. H. Cockshutt from post of Additional Sanitary Inspector to that of Chief Sanitary Surveyor and Inspector. By some re-arrangement of duties with the Additional Sanitary Inspector, Mr. M. C. Dawson, it has been found possible to cope satisfactorily with the work with this reduced staff.

#### VITAL STATISTICS.

BIRTHS.

	Live B	irths.	<u>.</u>	Birth Rate per 1000 estimated population.
	<u>M.</u>	F.	Total.	
Legitinato Illegitina		53 1	99 2	Crude 10.7 Adjusted 11.2
Total.	47	54	101	

Year	Clitheroe Ru	ral District	England and Wales.
	No. Registered.	Rate per 1000	Ratc per 1000
1955	101 .	10.7	15.0
1954 1953 1952 1951 1950	102 117 109 117 129	10.7 12.4 11.5 12.5 14.8	15.2 15.5 15.3 15.5 15.8
Average 5 years 1950 - 1954.	-	12.4	15.5

It should be noted that although the birth rate is 10.7 compared with 15.0 for England and Wales generally, this is the crude birth rate, i.e. has not been adjusted according to age and sex distribution of population. The fact for instance that about 2,000 populate the Calderstones Kental Hospital, and are included in the population of the Clitheroe Rural District, makes the birth rate appear less than it would be if the Clitheroe Rural District had a more normal population.

The post war peak birth rate for England and Wales was 20.5. After that there was a gradual decline, but the Ministry of Health state that a fairly stable level of natability has now been reached and that the level of the birth rate which has apparently stabilised is high enough for the replacement of the population - that is when the children now being born have grown up they will constitute the same number of adults of child bearing age as there are in the population at the present time. ·v'

43

Still	oirths.	-		Stillbirth Rate per 1000 total (live and still)
	<u>M.</u>	<u>F.</u>	Total.	births.
Legitimate	3	1	4	38
Illegitimate	-	-	-	
Total	3	1	4	

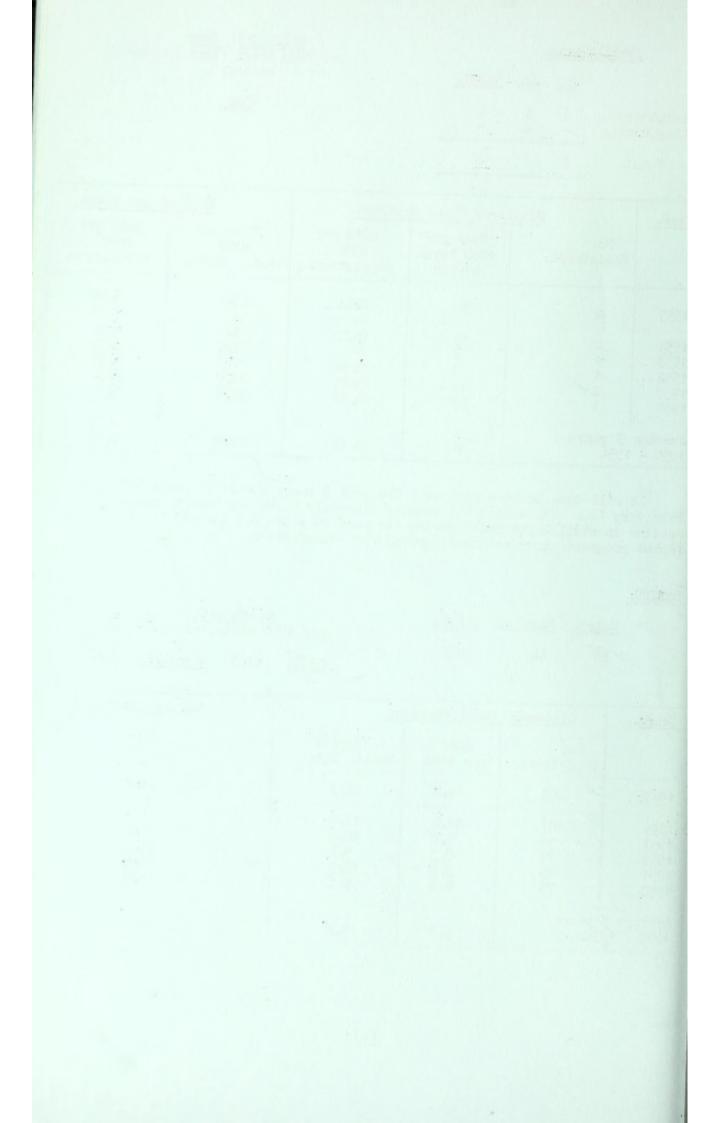

Year.	Cli	theroe Rural D	Englar	d and Wales	
	No. Registered.	Rate per 1000 total births.	Rate per 1000 population.	Rate pcr 1000 total births	Rate per 1000 population.
1955	4	38	0 <b>.</b> 144	23.1	0.35
1954 1953 1952 1951 1950	2 - 1 2 3	19 - 9 17 23	0.22 	23.5 22.4 22.7 23.0 22.6	0. 34 0. 35 0. 35 0. 36 0. 37
Average 1950 -	s 5 years 1954	14	0,18	22.8	0, 35

It will thus be seen that over the past 5 years the Still Birth Rate has been very low. Throughout the country generally there has been a gradual decline in still birth rates during the past 15 years but the slow rate of recent progress provides little groupf for satisfaction.

#### DEATHS.

Malcs.	Fenales.	Total.	Death Rate	
59	44	103	per 1000 estimated population	
		,	Orude 11.0 Adjusted. 12.3	

Year.	Clitheroc	Rural Distr	ict	England and Wales.
	No. Registered.	Rate per 1000	Adjusted Death Rate	Rate per 1000
1955.	103	11.0	12.3	11.7
1954 1953 1952 1951 1950	107 92 79 89 75	11.4 9.8 8.3 9.5 8.6	12.7 10.7 9.2 10.5 9.6	11.3 11.4 11.3 12.5 11.6
Average 1950 -	5 years 1954.	9•5	10.5	11.6

People are living so much longer that it is likely that by 1993 whilst the proportion of persons of working age, 15 to 64 years will continue as at present to constitute about two-thirds of the total, there will in due course be almost as many people aged 65 and over as children under 15. This continuing tendency for the population to contain more elderly and fever young persons must give rise to a number of social and medical problems, to which increasing attention is now being given.

Looked at in another way the expectation of life of a baby born in 1954 was about 68 years for a boy and 73 years for a girl whereas the figures for 1880 were boys 41 years, girls 45 years and in 1912, boys 52 years, girls 55 years and in 1932, boys 59 years, girls 63 years.

Roughly speaking a child born now is likely to live 15 years longer than a child born in 1910. This advance would seem in part due to advances in public health measures and partly to the better conditions of life generally.

Average 1950 - 1		10.8	18.2

1.

The Infant Mortality rate is generally regarded as a fairly reliable index as to the health of the people. Our average figure (1950-54) of 16 deaths to every 1,000 births compares very favourably with the average of 27.8 for England and Wales generally but when we remember that this figure was not 27.8 but 55.3 in the period average 1936 - 40 we see there have been great advances in the care of infants even since 1936 - 40. The care of health visitors, the provision of cheap milk and free vitamins and immunisation schemes doubtless all have a part to play in this.

In 1955 there were no deaths in the district of infants under one year of age.

Although as stated great success has attended the campaign to reduce deaths in the first year of life, nothing like this success has attended efforts to reduce the death rate in the first month of life (Neo-Natal Death Rate), and the Still Birth Rate. However this hard core is being tackled with increasing effort and there is some little improvement being shown.

#### B. GENERAL PROVISION OF HEALTH SERVICES.

The Lancashire County Council, as the Health Authority maintains a comprehensive range of Services - including Ante-Natal clinics, Child Welfare clinics and School Medical services - Medical and Dental. A speech theropist also visits the vicinity and there is provision for Child Guidance.

General Hospital Services are provided by the Regional Hospital Board in Blackburn, Accrington, Preston and Burnley. There is also access, where required, to Manchester, Liverpool and other Hospitals.

Provision is made for Maternity Cases at Branley Meade, Whalley, Queen's Park Hospital, Blackburn, and Preston Royal Infirmary. Should it be more convenient, rural district patients are at liberty to attend the Child Welfare Clinic at Clitheroe and the class for Relaxation and Exercises for Expectant Hothers both held weekly, also the nonthly Ante-Natal Clinic. All these clinics were transferred to Easthan House, Eshton Terrace, Clitheroe in 1955.

There is an Ante-Natal Clinic at Branley Meade Maternity Mospital, Whalley. This is conducted by a Consulting Obstetrician from the Blackburn Group of Mospitals and is held twice a month.

Park Lee Hospital, Blackburn is available for Infectious Diseases cases.

The Ambulance Service is provided by the Lancashire County Council.

Laboratory facilities are available at the Blackburn and East Lancashire Royal Infirmary and Freston Royal Infirmary. These laboratory facilities are also used by the General Fractitioners of the area.

There is a Pathological Clinic at Clitheree Hospital as a sub-laboratory of Blackburn Royal Infirmary. This is conducted by Dr. Spink, Pathologist to the Blackburn Group of Hospitals. Bacteriological, Pathological, Chemical and Blood examinations are undertaken and local doctors will be at liberty to refer Rural District patients there for any necessary tests thus saving reference to more distant hospital centres. The extensive service now provided will be much appreciated.

Physiotherapy Centre, Clitheroe. This centre was opened in March, 1954, at 52, King Street, Clitheroe under the auspices of the Trustees of the Clitheroe Nursing Association with considerable support from the Trustees of the Whalley and District Nursing Association and is available to any patients in the Rural District requiring treatment. It is not a part of the National Health Service and so a small charge has to be made for treatment. The centre is in charge of a Trained Physiotheropist and Assistant and provides for the usual treatments - massage, remedial exercises, diotherny, infra-red and sun-ray &c. Cases are referred by their own doctor and again it is helpful that patients need not travel to distant hospital centres for treatment and that doctors can provide continuity of treatment.

A domiciliary physiotherapy service would be of benefit for bed-fast and housebound patients in this scattered area, but shortage of staff and money appears to exclude such a development at present.

An Old People's Club was opened in Lowergate, Clitheroe in October, 1954 and a few old people in the eastern portion of the district nake use of this social centre.

#### C. FREVALENCE AND CONTROL OF INFECTIOUS DISEASES.

The incidence of notifiable Infectious Diseases, other than Tuberculosis, is shown in the following table.

Discases.			Te	otal	. Ce	ses	Not:	ificó	1		Total	Total
	Total Age Periods - Years					Deaths	cases renoved					
	Cases all ages.	0-	1-	3-	5-	10-	15-	25-	45-	65 & over.		to Hosp- ital.

Food Poisoning	1	-	-	-	-	-	-	-	-	1	-	-
Totals	89	2	12	16	30	9	1	7	8	4	-	

Of the above cases, the following notifications were in respect of innates of Calderstones Institution.

Dysentery - 9; Prounonia - 5; Erysipelas - 1.

The total cases notified shows a decrease of fifteen on the previous year. There were decreases in cases of Schrlet Fever (2 : 29), Whooping Cough (4 : 30), Acute Pneumonia (6 : 12), but increases in Measles (65 : 30), Dysentery (9 : 1), and Food Foisoning (1 : 0).

The Measles epidemic was fairly mild, and there were no deaths.

For the seventh year there were no cases of Diphtheria notified.

Discases.	1955	1954	1953	1952	1951	1950	Average 1950/4
Suallpox	-	-	-	-	-	-	-

(11)

#### PART II.

#### A. SANITARY CIRCUMSTANCES OF THE AREA.

#### WATER SUPPLIES.

Moorland springs provide the bulk of the water used in the area and the water is distributed throughout the District in either public or private ownership.

During the year work commenced and proceeded satisfactorily on the Chipping and Thornley Water Scheme Fart II - the extension of the distribution area to high level properties, new Saddle Reservoir and spring protection works and feeder pipes.

The erection of a Pumping Station at Birks Brow, Thornley-with-Wheatley and a Water Tower in Stonecroft Lane, Thornley for the supply of water to the Hill Top area commenced and will be completed early 1956.

The provision of these extra supplies to the Chipping and Thornley area which is expected during 1956 will greatly benefit many outlying properties which have experienced water difficulties over a long period.

The extension of the main along Pendleton Road, Wiswell, a distance of 1,090 yards of 3" A.C. main, was completed, making a supply available to properties which had been dependent on Spring supplies of varying quality and quantity over a number of years.

The scheme to ercet a water tower to supply the Barraclough area of Pendleton was abandoned during the year. The proximity of the Haweswater Aqueduct to Whalley, and the Council giving favourable consideration to obtaining future supplies from the aqueduct, with the provision of a storage tank at a higher level to feed the Barraclough area, obviated the necessity of a water tower.

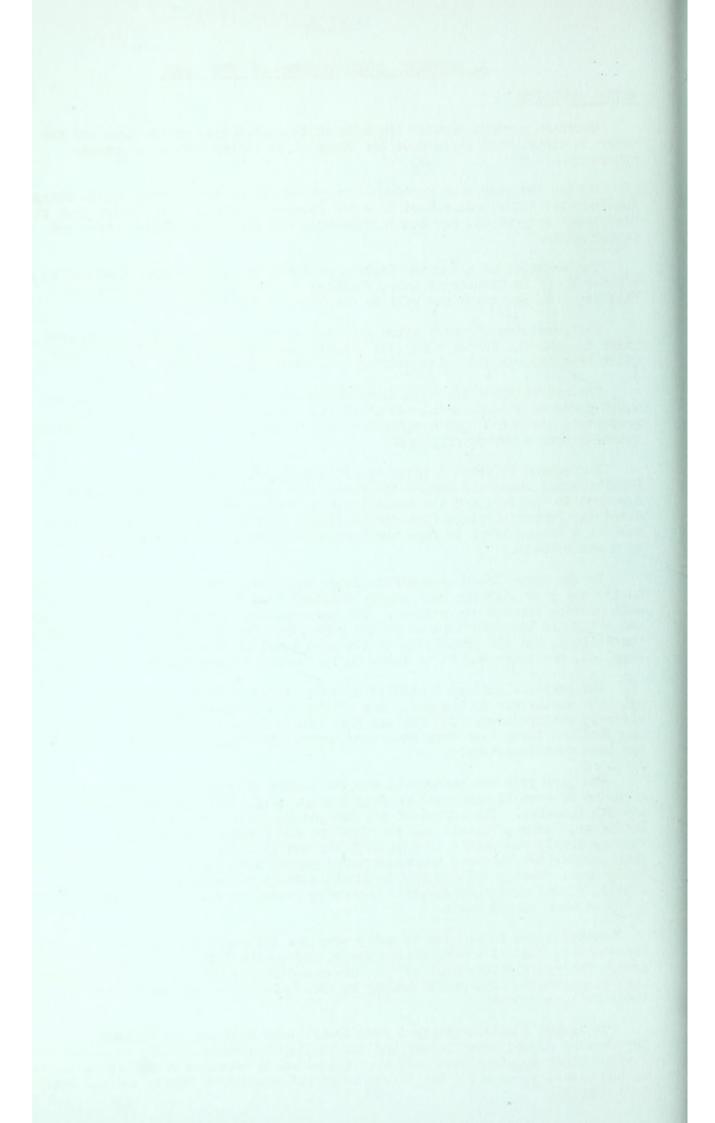

In the Hurst Green Area difficulties have been experienced on two occasions during the year with the bulk supply obtained from the Blackburn Corporation main passing through the village. The main has been fractured on these occasions and water has been fed back along the pipe line from the Blackburn reservoir to the village, but the properties at the high level at Kemple End were unable to be supplied, and water had to be taken to the houses in water carts and milk kits.

The pressure filters installed in 1953 at Cross Gills, Hurst Green to deal with the variations in the condition of the bulk water obtained have not been entirely satisfactory. The filters have required far more attention than was expected and there have been occasions during storm periods when the water treated has been unsatisfactory.

The year 1955 was remarkable for the amount of sumshine and the lack of rain. A period of drought commenced on July 3rd and very little rain fell until the 8th and 9th December. The effect of the drought was felt very strongly in the Whalley, Pendleton, Barrow, Wiswell and the Chatburn and Downham areas. The normal Whalley supply was unable to cope with the drought. In early June the supply from Archbishops Wood was commenced to be pumped into the mains by the pump at Sandy Brow. Though this supply is unsatisfactory in quality the pump was running almost continuously until December, giving approximately 30,000 gallons a day of much wanted water.

Restrictions in the use of water were put into effect on the 12th July for the Whalley, Wiswell and Pendleton Areas, and on the 12th August for the Chatburn Area. The restrictions were not withdrawn until November. Clitheroe Corporation were requested to step up the supply to the Whalley area and they co-operated to their fullest extent.

The extra supplies obtained from Archbishops Wood and the Clitheroc Corporation proved insufficient and the Whalley Reservoir ran dry on August 9th. Various other supplies which had been discarded in previous years were connected to the mains, these being the Calico Printers'Association Supply and the Ecball Well Supply.

The Wiswell Reservoir dropped to less than half of its capacity, and no further water was drawn off for the Whalley area in order to ensure a supply for Wiswell.

The system of manipulating various valves to ensure that a piped supply was available for some part of the day, helped to some extent.

The Barraclough area and the higher parts of Barrow were the most scriously affected areas. In these areas properties were without a piped water supply during the daytime and a supply was not always available at night. Milk kits were distributed to the houses most affected, and a system of supplying water by water cart was commenced and continued until the drought ended.

The Downham Springs supplying DownhamChatburn and Worston dropped appreciably and the daily deficiency rose to 25,000 gallons. A system of rationing was introduced and parts of Chatburn were only able to draw water for 6 hours per day. An emergency overland pipeline was laid from the Clitheroe Corporation main at Rydal Cottages to the main at the Pendle Hotel. This supply though very helpful, proved disappointing; the maximum daily amount received being only 4,000 gallons. Lack of pressure in the mains was insufficient to supply a greater quantity. The Downham springs responded better to the showers than the Whalley supply and the emergency was not as prolonged as at Whalley.

The drought necessitated a tremendous amount of extra work by the Staff of the Water Department, and other matters had to be neglected. Great credit is due to them for devotion to duty during a very anxious and trying time.

It is gratifying to know that the Council have now accepted their Consulting Engineer's Scheme for future supplies of water for the Whalley area from the Have swater Aqueduct, and a repetition of the shortage of water experienced during the summer can hardly be expected.

The Consulting Engineer has also been instructed to prepare a scheme for improving the Chatburn Supply.

Parish	1	Wellings.	Othe	r Buildings.	Totals.		
	No.	With Fublic Water Supply	No.	With Public Water Supply,	Bldgs.	Supplies from Public mains.

Worston	31	21	2	-	33	21	
Totals.	2181	1519	231	67	2412	1586	

The following table gives details of properties supplied with water from Public Mains.

Of the above non domestic supplies 211 are by meter measurement.

The following additional supplies were given during the year.

New Buildings	- Private Houses Other premises or works (by mete	6. er)
Existing properties		10.
	Other premises (by meter).	

Of the 662 dwellings not supplied from Public Mains, a large proportion obtains water from large private supplies viz. Downham Estates (Downham and Twiston), Huntroyde Estate (Pendleton), Stonyhurst College (Aighton, Bailey and Chaigley), the remainder depends upon individual and small joint supplies.

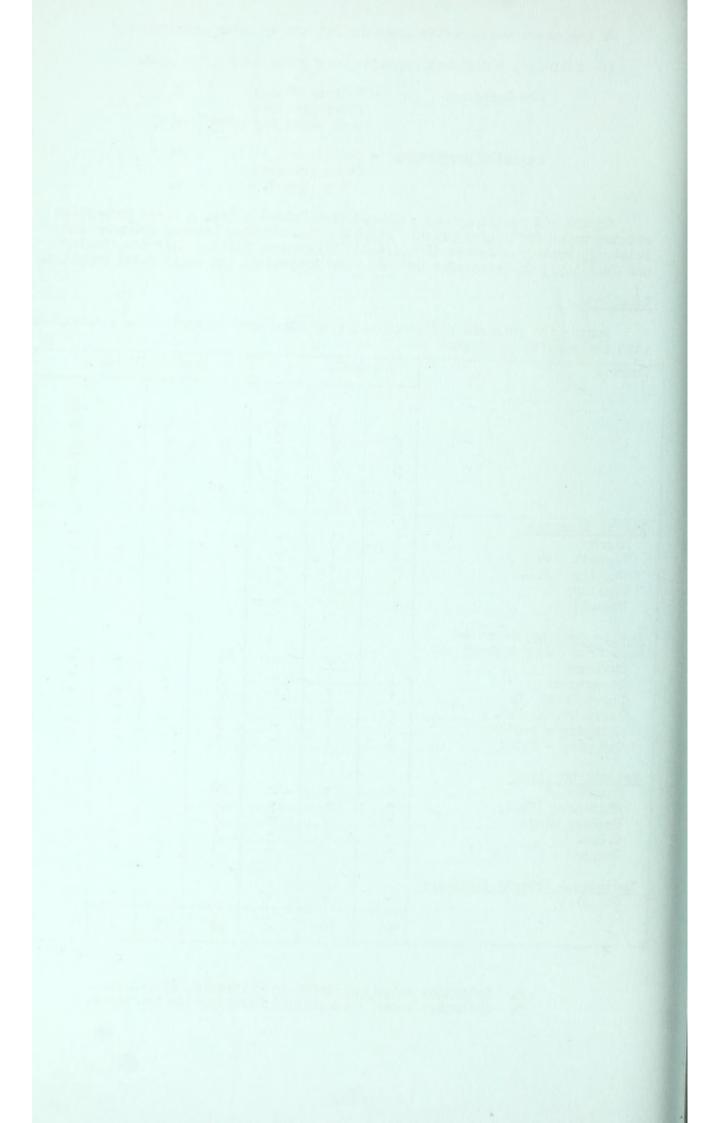

#### Sampling.

During the year the following water samples were submitted for examination, with the results as shown:-

Source.	Cher	nical.		Bø	cteric	logica	J.
	No. taken.	Satisfactory	Unsatisfactory	No. taken	Satisfactory	Doubtful.	Unsetisfactory
Public Supplies. Barrow Wiswell F. Whalley F.C. Whalley Wiswell	1	1		5 2 4 7 1	5 2 1 1 -	1	-

F. indicates water subjected to Filtration treatment.

C. indicates water subjected to Chlorination treatment.

#### SEVERAGE, DRAINIGE & CLOSET ACCOMICDATION.

The villages of Whalley, Wiswell, Barrow, Chatburn, Downham, Hurst Green and Chipping are provided with Sewerage Systems and Sewage Disposal Works. In the village of Pendleton the sewerage system is connected to the Disposal Works at Clitheroe Borough.

Worston is the only village in the area without a sewerage system.

The method of treatment adopted is by preliminary sedimentation, sprinkler filtration or by land irrigation.

On the whole, the severage disposal works are satisfactory, with the exception of Whalley. The scheme for the reconstruction of the Whalley and Calderstones Sewarage Works is still awaiting approval. The works steadily deteriorate and it is impossible to produce a satisfactory sample. The conditions of working, in an endeavour to maintain the works in a reasonable condition, are deplorable. It is hoped that in the very near future the long awaited sanction for improvements to be made will be given, and an early commencement made.

During 1955 the following closet conversions were carried out :-

Pail closets to fresh water closets. 13. Waste water closets to fresh water closets. 5.

The following are dotails of closet accommodation at the end of the year.

Water Carriage System.			Conservancy System.	
Public Sewers.		Septic Tanks.	Pail Closets serviced by	Pails, privies etc. not serviced by
Fresh Water Closets.	Waste Water Closets.		Council.	Council.
1394	24,9	131	153	253
1774			406	
		21	80	

These figures indicate that of the 2180 dwellings in the district 1774 have a water carriage system and that 1643 are connected to public sewers.

#### RIVERS AND STREAKS.

The serious pollution of the River Calder by industrial wastes from sources outside the district does not appear to have diminished during the year.

Gradual elimination of foul matters entering dykes and streams in the area is taking place chiefly by eliminating sink wastes entering directly into streams, and connecting them to sovers or septic tanks.

#### SHOPS AND OFFICES.

Special inspections were made as required and routine visits as circumstances permitted.

# FACTORIES.

Inspections for purposes of provisions as to health (including inspections made by Sanitary Inspectors).

Total.	9	6		1.	

## CAMPING SITES, TENTS, VANS AND SHEDS.

Seven licences were renewed during the year for individual caravans for occasional and week-end dwellings. There are quite a number of hutnents in the area which are not licensed. These huts have, in most cases, been in the area for 20 years or more.

There is only one site in the district used for permanent camping and that is the Girl Guides Association Camp at Wiswell. This is not a licensed site, as the Girl Guides Association is one of the Associations except from licensing under the Public Health Acts.

The district is well used by occasional week-end campers, but no complaints were received regarding any damage or muisance caused, which reflects well on the campers' behaviour.

#### ATMOSPHERIC POLLUTION.

There are eight works chimneys in the district, none of which has given cause for complaint. It would appear that an improvement in the fuel supplied has reduced to some extent, the amount of smoke produced.

The dust nuisance in the Chatburn area gives occasional cause for complaint. The nuisance appears to be at its worst when dry winds are blowing.

#### DISINFESTATION AND DISINFECTION.

Four premises were disinfected during the year following the occurrence of infectious disease.

No vergin infestation was discovered during the year.

#### SCHOOLS.

There are fifteen schools in the district, including three at Stonyhurst College.

Pendleton and Chipping Brabins Schools, have, during the year, had the pail closets converted to water closets and connected to the general sewage systems.

All the schools in the area are now provided with water closets with connections either to the sever or septic tenk.

A gradual improvement has taken place in the washing facilities for schools, but there is still room for improvement; it being essential that sanitary facilities be as near perfection as possible, as it is during school life that a child can be trained and guided into forming good habits.

## RAG FLOCK AND OTHER FILLING MATERIALS ACT, 1951.

One chair works in the district is registered in accordance with the provisions of the act.

## RODENT CONTROL.

A Rodent Operative is employed in the search for rats and mice and the treatment of infestation found. In order to encourage the notification of rat infestation by owners or occupiers of private dwellings the Council provides a free service and the Ministry of Agriculture reinburses 50% of the cost. A charge covering the whole of the cost plus 30% for administrative purposes was made for the work done on business premises. The Ministry of Agriculture contributes a 50% grant towards the cost of inspections in the district, and sever treatments.

Properties and land in the district are continually investigated for infestation. Fublic severs were test baited and treated twice during the year in accordance with Ministry of Agriculture requirements. Sewage Disposal Works and tips were regularly treated as they form the principal sources of infestation.

During the drought period the Rodent Operative had to be employed on the distribution of water, and the number of inspections during the year was reduced accordingly.

#### FETROL LICENCES.

There are 31 petrol stores licensed, of which ten are petrol filling stations.

## SANITARY INSPECTIONS OF THE DISTRICT.

No. of premises visited	2235
No. of defects or nuisances discovered	381
No. of defects or nuisances abated	360

Dáiries	

#### B. SCAVENGING SERVICES.

#### NIGHTSOIL COLLECTION AND DISPOSAL.

Collection of nightsoil is carried out weekly from 153 properties throughout the whole of the district. The collection is completed in two days each week; the nightsoil being disposed of at the Council's Sewage Disposal Works. This is a service which receives more regular attention than any other, in spite of adverse conditions of weather.

For many years the Council has made grants towards pail closet conversions with connections to either scuer or septic tank so as to reduce the number cuptied by the Cleansing Department. The grant is half the cost of conversion with a maximum payment of £15.

The 153 pail closets serviced by the Council are distributed as follows :-

Aighton, Bailey & Chaigley	48.
Thornley-with-Wheatley	19.
Chipping	29.
Chatburn	9.
Twiston	7.
Fendleton	16.
Wiswell	8.
Worston	8.
Whalley	9.

## REFUSE COLLECTION AND DISPOSAL.

In December 1954 the Council purchased two Karrier Bantam Refuse Collecting Vehicles and they were put into use at the beginning of the year, thus discarding the system that had prevailed for a number of years of hiring vehicles and drivers.

The success of the scheme is not only shown in the saving to the Council of £550, but in the increased efficiency derived from the use of more hygienic vehicles enabling a more reliable and efficient service to be given to the public. All refuse bins are emptied once every two weeks. An additional service of emptying refuse from Hotels and Cafes once a week has proved a welcome relief to many of the Hotels.

The refuse is disposed of by controlled tipping at Whalley, Chatburn, Hurst Green and Chipping, and time saved on collection is devoted to the tips which are in a better condition than ever before.

## C. HOUSING.

Following the coming into force of the Housing Repairs & Rents Act, 1954, the re-survey of all Class IV and V houses under the Hobhouse Report was continued and completed. Under the Hobhouse Report 49 houses were in Class V and 96 in Class IV. As a result of the re-survey 24 houses were placed in Class V and 52 in Class IV, giving a total of 76 unfit houses in the district. The survey showed that since the report was submitted in 1950, 69 houses had either been improved or had ceased to be used for housing purposes.

The report was considered by the Council, when it was decided to submit to the Ministry the figure of 76 houses which they proposed to deal with under the Housing Jets during the next 5 years, the re-survey thus becoming the basis of the policy which the Council propose to adopt in order to bring the unfit houses in the district up to the required standard or be demolished during the next 5 years.

## IMPROVIDENT GRANTS - HOUSING ACT, 1949.

Eight applications were made for Improvement Grants and were approved during the year, the policy being to encourage owners of property in the Class IV and V groups capable of repair and improvement, to improve the property by means of the Improvement Grant. The majority of applications so far received are for owner/occupied houses.

There is a general reluctance to repair or improve property, due no doubt to the high cost of paterials and labour coupled with the restrictions placed on the rents obtainable.

The following is a list of Council owned dwellings

Whalley - Stocks Avenue		-	3	bedroom	(pre 1939)
Whalley - Green Park	22	-	3		
Whalley - Woodfield View				11	(Airey type)

## MEAT AND OTHER FOODS.

Four private slaughterhouses are in operation in the district. One at Chipping where the local butcher kills on average 1 beast and 2 sheep per week, and two at Whalley for private butchers where they normally kill one or two cattle and up to twelve sheep per week, with occasional pigs. The Whalley slaughterhouses require to be visited 2 or 3 times per week. The other remaining licensed slaughterhouse is the Co-operative Wholesale Society at Shaw House, Whalley, where attendance is required on two full days, with daily visits the remainder of the week, including Sunday in Surmer. The Sunday slaughtering has proved a problem, and it is thought that there are sufficient week days without the necessity of Sunday slaughtering, which ereates unnecessary overtime with subsequent time off.

With the exception of sheep it has been possible to maintain almost a 100% inspection service which reflects well on the work of the Additional Sanitary Inspector.

	Cattle (Excluding cows).	Cows	Calves	Sheep and Lanbs	Pigs.
Number killed	3754	2039	11	25,990	129
