Dorking Rural District.

ANNUAL REPORT

OF THE

MEDICAL OFFICER OF HEALTH,

For the Year 1905.

CONTENTS.

- I.—POPULATION, BIRTHS and DEATHS.
 - II.—INFECTIOUS DISEASES.
 - III.—SUMMARY of OTHER PROCEEDINGS taken, during the year, under the Sanitary Acts, &c.
 - IV.—FACTORIES and WORKSHOPS.
 - V.—APPENDIX, containing certain TABLES of Sickness and Mortality issued by the Local Government Board.
-
-

Prepared in accordance with Sec. 14 of the Order of the Local Government Board dated 23rd March, 1891, Regulating the Duties of Medical Officers of Health.

DORKING RURAL DISTRICT.

Area, 39,525 Acres.

Number of Parishes, 8.

	1881	1891	1901
Number of Inhabited Houses at Census ...	1816	1986	2064
Population at Census	9312	10,097	9779
Number of Persons per House	5.02	5.08	4.74

Medical Officer's Report for the Year 1905.

I.—Population, Births, and Deaths.

POPULATION. The population of the district in the middle of the year under review may be estimated at 10,000 persons.

BIRTHS. The Births registered in the district during the year were 205 in number, representing an *Annual Birth-rate* of 20.5 per thousand of the estimated population, which is also the average rate for the preceding ten years. The rate for the year for England and Wales was 27.2.

DEATHS. The Deaths registered in the district during the year were 86 in number, to which must be added 12 deaths in the Dorking Infirmary and Cottage Hospital, the Leatherhead Cottage Hospital and the Brookwood Asylum, of patients belonging to this district; 4 of the patients came from the Dorking Rural Parish, 2 from Abinger, 3 from Capel, and 1 each from Effingham, Mickleham, and Newdigate. The nett 98 deaths represent an *Annual Death-rate* of 9.8 per thousand of the estimated population, as against an average rate of 12.8 for the preceding ten years, and a rate of 15.2 for the year for England and Wales. The deaths of males were 55, and of females were 43 in number.

CAUSES OF DEATH. Two deaths were attributed to *Diphtheria*, one to *Influenza*, seven to *Phthisis*, fourteen to *Bronchitis* and *Pneumonia*, two to *Alcoholism*, eleven to *Cancer*, fourteen to *Diseases of the Heart*, three to *Old Age*, and five to *Apoplexy*.

The deaths from *Cancer* in each of the five years, 1901 to 1905, were 14, 9, 14, 8 and 11 in number respectively, representing an average *Annual Death-rate* of 1.13 per thousand of the population. The distribution of the 56 deaths, according to age and sex, was as follows:—

Years -	25	35	45	55	65	75	85	All ages.
Male -	—	1	2	8	9	3	—	23
Female -	3	3	6	5	11	4	1	33

INFANT MORTALITY. The deaths of *Infants under one year* were 11 in number, and were at the low rate of 54 per thousand births, as against an average rate of 80 for the previous ten years. Nine of the infants were males and two were females. The causes of death, classified according to the ages of the children in weeks and months, will be found in the new Table, issued by the Local Government Board, on page 14.

The ZYMOTIC DEATH-RATE was 0.5 per thousand of the population.

II.—Infectious Diseases.

SMALL POX. No case was notified. Notifications were received from time to time from Port Medical Officers, of the arrival in the district of passengers from transports, on which cases of Small Pox had occurred, and enquiries were made to ascertain that no suspicious symptoms occurred.

SCARLET FEVER. Four cases were notified in three houses at Westcott at the end of January and early in February. In May, three children at Mickleham and a child living in the Parish of Leatherhead, but attending Mickleham Schools, were notified to have Scarlet Fever, and the School was accordingly closed. Soon after the re-opening in June, the Schoolmaster, who had been warned to watch for symptoms of the disease, informed me that he had suspicions with regard to some of the children, and I discovered on examination that three of the children in school were desquamating. Single cases occurred subsequently in July, October and November respectively. The disease was very mild in type, and it is probable that there were other unrecognised cases in the intervals, although a careful watch was kept by the medical practitioners, who requested me in several instances to examine children with doubtful symptoms. I also visited the School from time to time and examined the children, and it appeared to be improbable that attendance had any influence in spreading the disease after the first outbreak. The schoolrooms were disinfected by the Sanitary Inspector, and all other precautions were taken to prevent the extension of the disease.

Nine cases, the majority of which were imported, occurred during the year in other parts of the district, and, in all, twenty-four cases were reported in twenty houses. Ten patients were removed to the Isolation Hospital.

DIPHTHERIA. Seven cases, two of which ended fatally in July and December, were notified in seven houses. There was no special incidence upon any part of the district. Four of the patients were removed to the Isolation Hospital. Four specimens were examined at the Lister Institute at the expense of the Council, for the detection of the Diphtheria Bacillus, with negative result in each case.

ENTERIC FEVER. No case was notified.

MEASLES and WHOOPING COUGH caused no death.

DIARRHOEA caused two deaths among young children at Westcott, in March and November, and the deaths of two adults were ascribed to Dysentery and Enteritis.

Of **ERYSIPELAS** there were reported seven cases, one of which ended fatally.

No case of **PUERPERAL FEVER** was reported.

TUBERCULAR DISEASE. The deaths from *Pulmonary Consumption* or *Phthisis* were seven in number, and were at the rate of 0.9 per thousand of the population, as against a previous average rate of 1.0 per thousand. One death was caused by *Tubercular Meningitis*.

No application was made during the year for the examination of specimens from persons suspected to be suffering from Phthisis, or for disinfection of rooms which had been occupied by phthisical patients.

DISINFECTION. Fumigation of rooms after each case of Scarlet Fever or Diphtheria was carried out personally by the Inspector. Infected bedding and other articles were disinfected in the Thresh's Disinfector at the Isolation Hospital.

THE ISOLATION HOSPITAL. No further steps were taken towards the erection of permanent brick buildings at the hospital site, but the Joint Committee had under consideration at the end of the year the question of providing additional ward accommodation, as the present buildings do not enable them to deal in a satisfactory manner with cases of more than one disease occurring at the same time. A letter was received from the Surrey County Council upon this matter, as a representation had been made to them with regard to the occurrence of some delay in the removal of a patient suffering from Diphtheria, owing to lack of room in the Hospital.

Ten cases of Scarlet Fever and four cases of Diphtheria from the Rural District, and three cases of Scarlet Fever and four of Diphtheria from the Urban District, were admitted during the year. The first fatal case since the opening of the Hospital at the beginning of 1903 occurred in December, when a patient died of Diphtheria on the day after her admission.

SMALL POX HOSPITAL ACCOMMODATION. In April, the Council received notice that the Local Government Board had dismissed their appeal against the Order issued by the Surrey County Council under the Isolation Hospital Acts, including this district in a Hospital District for the provision of accommodation for cases of Small Pox.

TABLE shewing the number of Deaths from the Seven Chief Zymotic Diseases and from Phthisis, and the number of cases notified, in each of the years 1893—1905.

Year.	Scarlet Fever.		Diphtheria.		Enteric Fever.		Diar- rhoea.	Measles.	Whoop'g Cough.	Phthisis.

1904	2	1	...	1	...	1	5
1905	24	...	7	2	3	7

One case of Small Pox was notified in 1893.

III.—Summary of other proceedings which were taken under the Sanitary Acts, etc.

Inspections and Nuisances. I continued the inspections in various parts of the district with Mr. Fuller, the Sanitary Inspector, who served the requisite notices, and continued to re-visit until the nuisances were abated. At Newdigate the chief defects dealt with were insanitary privies, drains discharging into ditches, and dampness and want of cleanliness of walls and ceilings. At Capel inspection was made mainly into the water-supply, but insanitary conditions were noted and remedied. At Abinger an inspection was made with regard to the discharge of drainage into water-courses, and at Holmwood with regard to nuisances caused by want of connection of drains with the sewers.

A tabulated statement of the Inspector's work will be found on page 9.

A number of notices requiring redrainage of premises were served, but the figures relating to the reconstruction are not included in Mr. Fuller's list, as the work was carried out under Mr. Rapley, the District Surveyor, who gives details below, in the section relating to Works of Sewerage.

New Buildings. Mr. Rapley informs me that plans for 45 new buildings were submitted for approval under the Bye-laws during the year. Proceedings were taken against a builder for infringements of the Bye-laws, and a fine of 10s. and costs was imposed upon each of three separate counts.

Water Supply. The Dorking Water Company extended their mains to Capel and Ockley, but they were not prepared to lay on the water generally before the end of the year.

In October I collected and examined samples of water from fifteen private wells in Capel, and found that three were fairly good, five were doubtful, and seven were suspicious or bad in quality. Action was deferred until water from the mains should be available.

In the Parish of Newdigate water was laid on to several houses, which had been dependent on an unsatisfactory supply from private wells, from the mains of the East Surrey Water Company, which are being extended into the eastern parts of the parish.

I also examined seventeen samples of water which were sent to me by the Inspector chiefly in connection with applications for water-certificates, which were withheld in several instances until the supply had been improved. I reported to the Council upon the dangerous supply of some cottages at Abinger, from a stream which receives the effluents from the drainage of private houses, after treatment on "contact beds," and the owner is providing for an improved supply from springs.

Dairies, Cowsheds and Milkshops. The Sanitary Inspector visited these premises regularly, paying three or four visits to each in the course of the year, and he makes the following return:—

Number of registered cowkeepers, etc., at end of 1904	53
Number withdrawn during 1905	3
Number added during 1905	2
Number on Register at end of 1905	52
Number of visits during the year	164
Number of sheds improved in lighting and ventilation	4
Number of sheds improved in paving and drainage	3
Number of sheds limewashed after notice or request	14

Seven cases of Anthrax or suspected Anthrax were reported to me by the police. Enquiries were made into each case, and it was ascertained that in no instance were milch cows in contact with the herds in which the disease had appeared.

Slaughter Houses. Bye-laws with respect to Slaughter Houses, which had been adopted by the Council in the previous year, were allowed by the Local Government in June. The Bye-laws consist of the Model Code, with the following Clause added, in order to exempt farms from the operation of all the sections except that relating to prevention of cruelty to animals:— "Nothing contained in the foregoing Bye-laws Nos. 1 to 8 and 10 to 16 shall be deemed to apply to isolated or occasional cases of slaughtering upon any farm premises; nor to any farm premises upon which sheep, swine, or calves, but not other cattle, may from time to time be slaughtered, provided that no sheep, swine, or calves are conveyed to such farm premises solely for the purpose of slaughter."

Seven premises were registered, and the Inspector informs me that he paid 30 visits of inspection in all during the year.

Works of Sewerage and Sewage Disposal. Mr. Rapley has been good enough to give me following particulars with regard to these works.

(A) SOUTH HOLMWOOD. The Disposal Works continue to act very satisfactorily, and no complaint was received from the Thames Conservancy with regard to the effluent. The drains of only about seven houses, which could be connected with the sewers, are still discharging into cesspools.

(B) NORTH and MID HOLMWOOD. The Disposal Works continue to act satisfactorily, and no complaint was received from the Thames Conservancy. There are 204 houses connected with the system, and only 26 more remain to be connected.

(C) WESTCOTT. The works were completed, and the total number of houses connected with the system by the end of the year was 131, leaving 158 to be connected.

A Local Government Enquiry was held in May by Col. A. G. Durnford, R.E., into an application of the Council for sanction to borrow a further sum of £620 in respect of this scheme. The excess was entirely due to an under-estimate of the claims for wayleaves.

(D) CAPEL. Mr. Rapley is engaged in the preparation of a scheme for sewerage of this village and the owner of the suggested site has been approached.

(E) OCKLEY. Mr. Rapley is engaged in conjunction with Mr. Strachan, C.E., in the preparation of a scheme for sewerage of this village. Preliminary plans have been prepared and referred to a Local Committee.

IV.—Factories and Workshops.

In only three of the workshops in the district are more than five persons known to be employed, and there are few matters that call for comment, as complete inspections have been carried out in previous years, and all major defects have been remedied. The Sanitary Inspector visited each of the workshops and factories two or three times, but with the exception of want of cleanliness, which was remedied in each case upon verbal request, he found no nuisances to exist.

The underground bakehouse at Effingham, which was reconstructed before a certificate was granted in 1903, was kept in a satisfactory condition.

The following Table, in the form issued by the Home Office, has now to form part of the Annual Report.

FACTORIES, WORKSHOPS, LAUNDRIES, WORKPLACES AND HOMEWORK.

1.—INSPECTION.

INCLUDING INSPECTIONS MADE BY SANITARY INSPECTORS OR INSPECTORS OF NUISANCES.

Section 22 of the Public Health Acts' Amendment Act, 1890, has been adopted by the District Council.

J. WILLIAMSON, M.D.

THE LIMES,
EPSOM,
January, 1906.

SANITARY INSPECTOR'S REPORT

For the Year ending December 31st, 1905.

Number of complaints received in writing	...	14
Number of Premises inspected under Section 92 of the Public Health Act, 1875	...	564
Number of Nuisances discovered	...	112
Ditto ditto remedied without being reported	...	42
Ditto ditto reported to the Sanitary Authority	...	80
Ditto ditto remedied after report	...	80
Number of Notices served for the abatement of Nuisances (Preliminary or by order of the Sanitary Authority)	...	43
Number of visits to Cowsheds and Dairies...	...	164
Ditto ditto Slaughter Houses	...	30
Ditto ditto Factories and Workshops	...	150

Particulars of Work done by Owners or Occupiers, for abatement of Nuisances, in most cases after Service of Notice :

Number of privies, cess-pools, ditches, pools, gutters, watercourses, urinals, ashpits, and drains cleansed, and of deposits removed	...	48
Number of old privies re-constructed as water-closets	...	8
Number of old privies re-constructed with small watertight vaults or with pails...	...	2
Number of premises at which the drains were re-constructed, ventilated, trapped or disconnected from the house-pipes	...	14
Number of premises at which new drains or cess-pools were provided under Section 23 or Section 94	...	3
Number of premises from which animals, improperly kept, were removed	...	1
Number of houses in which overcrowding was abated	...	1
Number of houses which were provided with efficient ventilation	...	—
Legal proceedings taken, under Section 96, for abatement of nuisances (number of times)	...	—
Legal proceedings taken, for not complying with Order of Justices (ditto)	...	—
Houses condemned by Justices, as unfit for human habitation, under Section 97 of the Public Health Act	...	—
Number of houses abandoned or pulled down by the Owners, as unfit for human habitation after service of notice by the Sanitary Authority	...	—
Number of houses cleansed	...	34

WATER SUPPLY :

Number of samples sent to the Medical Officer of Health for Analysis	...	17
Wells, tanks, cisterns (public or private) closed after notice under Section 70 of the Public Health Act, as unfit for drinking or domestic purposes	...	—
Number of premises at which water was provided by owners of property under Section 62 of the Public Health Act, 1875, and Section 3, Public Health (Water) Act, 1878	...	3
Legal proceedings taken against Owners under Section 6, Public Health (Water) Act, 1878 (number of times)	...	—
Number of Water Certificates which were granted under Section 6 of the Public Health (Water) Act, 1878	...	13

A. J. FULLER.

TABLE I.

Vital Statistics of Whole District during 1905 and Previous Years.

YEAR.	Population estimated to Middle of each Year.	BIRTHS.		TOTAL DEATHS REGISTERED IN THE DISTRICT.				TOTAL DEATHS IN PUBLIC INSTITUTIONS IN THE DISTRICT.	Deaths of Non-residents registered in Public Institutions in the District.	Deaths of Residents registered in Public Institutions beyond the District.	NET DEATHS AT ALL AGES BELONGING TO THE DISTRICT.	
		Number.	Rate.*	Under 1 Year of Age.		At all Ages.					Number.	Rate.*
				Number.	Rate per 1,000 Births Registered	Number.	Rate.*

1899	9,820	161	16.4	20	124	129	13.1	16	145	14.8
1900	9,800	203	20.7	13	64	118	12.0	20	138	14.1
1901	9,780	210	21.5	17	81	118	12.1	18	136	13.9
1902	9,820	210	21.4	20	95	104	10.6	8	112	11.4
1903	9,910	217	22.0	17	78	97	9.8	4	1	12	108	10.9
1904	9,940	208	21.0	17	82	102	10.3	3	3	16	115	11.6
Averages for years 1895-1904	9,870	202	20.5	16	80	113	11.5	1	1	14	126	12.8
1905	10,000	205	20.5	11	54	86	8.6	1		12	98	9.8

* Rates in Columns 4, 8 and 13 calculated per 1,000 of estimated population.

NOTE.—The deaths included in Column 7 of this table are the whole of those registered during the year as having actually occurred within the district or division. The deaths included in Column 12 are the number in Column 7, corrected by the subtraction of the number in Column 10 and the addition of the number in Column 11.

By the term "Non-residents" is meant persons brought into the district on account of sickness or infirmity, and dying in public institutions there; and by the term "Residents" is meant persons who have been taken out of the district on account of sickness or infirmity, and have died in public institutions elsewhere.

Institutions outside the District receiving sick and infirm persons from the District are the Dorking Workhouse, the Dorking Cottage Hospital, the Brookwood Asylum and the Leatherhead Cottage Hospital.

The Capel Hospital receives sick persons from other parts of the District, and the Ockley Sanatorium from other Districts.

Total population at all ages.....	9,779	} At Census of 1901.	
Area of District in acres (exclusive of area covered by water) } 39,385.	Number of inhabited houses.....		2,061
	Average number of persons per house.....		4.74

NOTES.—Deaths of residents occurring beyond the district are included in sub-column *c* of this table, and those of non-residents registered in the district are excluded. Deaths of residents occurring in public institutions are allotted to the respective localities, according to addresses of the deceased. In September, 1900, a part of the parish of Dorking Rural, having a population of 70, was transferred to the parish of Capel. In October, 1901, parts of the parishes of Abinger and Wotton, having populations of 71 and 62 respectively, were transferred to the parish of Ockley.

TABLE III.

Cases of Infectious Disease notified during the Year 1905.

NOTIFIABLE DISEASE.	CASES NOTIFIED IN WHOLE DISTRICT.							TOTAL CASES NOTIFIED IN EACH LOCALITY.							NUMBER OF CASES REMOVED TO HOSPITAL FROM EACH LOCALITY.
