1907.

SUMMARY OF REPORT.

DRONFIELD URBAN DISTRICT.

Area : 1046 acres.

Population (census) 1891, 3,438 ; (census) 1901, 3,809.

Estimated Population, 1907, 3960.

Number of Occupied Houses : 1901, 871 ; 1907, 950.

Rateable Value, 11,743 10s. 0d. ; Assessable Value £9,621 18s. 0d.

General District Rate, 4s. 2d.

Poor Rate, 3s. 9d. on Buildings, and 1s. 10½d. on Agricultural Land.

Vital Statistics.

Birth Rate per 1,000, 28.

Crude Death Rate per 1,000, 13·8.

Corrected Death Rate per 1,000, 14·8.

Infantile Mortality (Deaths under one year per 1,000 births), 117.

Water Supply :—

Source of Supply : Moorland Water from Chesterfield Rural
Sanitary Authority's Mains.

Constant Supply during the year.

Scavenging and Refuse Disposal : By Council's Own Carts and
Workmen.

ANNUAL HEALTH REPORT,

For 1907.

TO THE CHAIRMAN AND MEMBERS OF THE
DRONFIELD URBAN DISTRICT COUNCIL.

GENTLEMEN,

I have pleasure in laying before you my Seventh Annual Report of the Health of the Dronfield District.

Physical Features, and General Character of District.—The district lies to the South of Sheffield, and is immediately surrounded by the Chesterfield Rural District. It has an area of 1046 acres, no part being covered by water, and is hilly in nature. The chief industries are coal mining, iron founding, and edge-tool making.

The Population of the district at the census of 1901, was 3,809, and the number of inhabited houses 871. The estimated population to the middle of 1907 is 3,960, and the number of inhabited houses 950, giving an average of 4·16 per house.

The Births registered in the District during the year were 108, there were also three births in the Chesterfield Union Hospital born of Dronfield Residents, making the total of 111, giving a rate of 28 per 1,000, which is a decrease of 6 per 1,000 on the previous

year. There were 9 illegitimate births. The rate for the previous ten years is as follows:—

1897	1898	1899	1900	1901	1902	1903	1904	1905	1906
25.7	21.7	26.4	27	34.8	31.7	29.6	36.3	26.2	34

giving an average rate of 29.3.

The Deaths registered in the District during the year were 55, giving a crude death-rate of 13.8. Three of these were deaths at the Isolation Hospital of non-residents. There were also seven deaths of Dronfield residents in Public Institutions beyond the District, viz:—Chesterfield Union Hospital and the Royal Hospital, Sheffield, which gives the nett deaths belonging to the District 59, and a corrected death-rate of 14.8 per 1,000 which is below the average for the last ten years.

The corrected death-rate for the previous ten years is as follows:—

1897	1898	1899	1900	1901	1902	1903	1904	1905	1906
22.1	16.1	17.1	17	18.8	19.2	16.2	19.4	15.5	12.6

which gives an average of 17.4 per 1,000.

Infantile Deaths (Deaths under one year).—There were thirteen deaths of infants under one year, which is equal to an annual rate of 117 per 1,000 births registered.

The rate for the previous ten years is as follows:—

1897	1898	1899	1900	1901	1902	1903	1904	1905	1906
194	155	162	235	187	163	104	118	145	60

which is equal to an average rate of 152.

House Accommodation.—The Population work out at 4.16 per house. The Houses are in good state of repair. None have been closed during the year.

Sewerage and Sewage Disposal.—The public sewer has been extended 350 yards up Hallowes Lane, and 16 houses brought into the sewage area. The outfall works have been maintained in an efficient state, a new Detritus Tank, and a 50 feet Percolating Filter is to be put down during 1908.

Excrement Disposal.—There are 818 houses with Privy Middens, 116 with Water Closets, and 16 with Slop Water Closets, three Privies have been converted into Water Closets, and in 15 cases defective Privies have been improved. Scavenging work is done by the servants of the Council, and the team work is done by Council's own horses and carts at a total cost of £151 4s. 6d. which works out at the cost of 3s. 2d. per house. This includes rent of stables and cost of horses, etc. The Ashpits and Closets are cleaned out once at least in three months, and as often as otherwise required. The scavenging carts go round each fortnight for the collection of Ashes, Rubbish, etc.

Water Supply.—The supply has been constant throughout the year, and is supplied from the Chesterfield Rural Sanitary Authority's mains.

Lodging Houses.—There is only one in the district, the Bye-Laws for which were passed in May, 1877. There is no special mention of the cubic space per bed, but 400 feet per person is allowed, and there are separate arrangements for the sexes.

School Buildings.—The sanitation is what is required; there are separate water closets, and other conveniences, and the state of the buildings are satisfactory.

Section 132 of the Factory and Workshops Act, 1891.—In accordance with this Act, I have visited all the Factories and Workshops on the register of which there are 33, viz., 15 Factories and 18 Workshops, and in all the cases the sanitary arrangements were satisfactory.

There are no out-workers in the district.

Dairies and Cowsheds.—There are eight of these on the register, and they have been systematically inspected, and found in a sanitary condition.

Bye-Laws.—New Bye-Laws relating to Slaughter-Houses, Offensive Trades, Cleansing of Footways and Pavements, Removal of

House Refuse, and Cleansing of Privies, Ashpits, and Cesspools, and with respect to other Nuisances, were passed by your Council in August, and were confirmed by the Local Government Board.

Zymotic Diseases.—There were two deaths from Zymotic Disease, viz.—Measles 1, and Typhoid Fever 1.

Scarlet Fever.—There were eight cases of Scarlet Fever notified during the year, viz., one in February, three in April, two in July, one in August, and one in December. All the cases were removed to the Isolation Hospital, their homes were thoroughly disinfected by Formalin Fumigation, and no secondary cases occurred in any of the houses.

Diphtheria.—There were thirteen cases of Diphtheria notified during the year, viz., one case in March, two in May, one in June, one in August, two in October, and six in November. They were all of a mild type, the two cases in October, occurring in one house, and three cases in November were also in one house. As there are no special wards at the Isolation Hospital for this disease, they all had to be treated at home. As all the cases except one occurred in children of school age, I visited the school, and examined all the children who had complained of any soreness of the throat, but did not detect any of Diphtheritic origin.

Erysipelas.—There was one case notified, and it was of a mild character.

Typhoid Fever.—This case occurred in September, and was promptly removed to Hospital, but the patient unfortunately died. I could not get any definite source of infection.

Diarrhœa.—There were three deaths from this disease, all in infants under one year of age. The death-rate is equal to 75 per 1,000.

Malignant Diseases.—There were four deaths due to Cancer, which is equal to an annual rate 1 per 1000.

Phthisis and other Tubercular Diseases.—

There were four deaths from Tubercular Diseases other than Phthisis, which is equal to an annual rate of 1 per 1,000.

Respiratory Diseases.—There were four deaths from Bronchitis, and three from Pneumonia, giving a death-rate of 1·7 per 1,000.

I am,

Gentlemen,

Your Obedient Servant,

O. H. HUDSON.

February 5th, 1908.

TABLE 1.

VITAL STATISTICS OF WHOLE DISTRICT DURING
1907 AND PREVIOUS YEARS.

DRONFIELD URBAN DISTRICT.
