#### LIST OF MEMBERS OF THE TOWN COUNCIL

on

31st December, 1960

The Mayor : Councillor W. ROCHFORD

Deputy Mayor : ‡Alderman Mrs. E. BODDAN

Alderman R. BENSON Alderman J. BIRCH Alderman C. FLANAGAN Alderman C. E. JOHNSON Alderman J. McCANN, M.P. Alderman J. G. SMITH, C.C. Alderman O. WILLIAMS Councillor D. W. ANDERSON Councillor J. BRADLEY Councillor J. BURROWS Councillor G. B. COLLIER Councillor A. COOPER Councillor T. CUSACK Councillor D. A. DOW Councillor G. K. EDWARDS Councillor Mrs. M. J. HEMBROUGH, J.P. ‡Councillor C. L. JONES ‡Councillor M. H. LEWIS Councillor P. LOMAX ‡Councillor P. LOMAX ‡Councillor W. J. MCKAY ‡Councillor Mrs. I. M. M. MILLS ‡Councillor Mrs. M. A. MOORE ‡Councillor Mrs. M. A. MOORE ‡Councillor F. M. NOLAN Councillor F. M. NOLAN †Councillor G. NOLAN †Councillor Mrs. C. D. RHODES \*Councillor Mrs. C. D. RHODES \*Councillor A. H. WALSH Councillor G. WILKINSON Councillor J. S. WOODROW

\*Chairman of the PUBLIC HEALTH Committee. †Deputy Chairman of the PUBLIC HEALTH Committee. ‡Members of the PUBLIC HEALTH Committee.

#### PUBLIC HEALTH OFFICERS OF THE LOCAL AUTHORITY

Medical Officer of Health : WILLIS J. ELWOOD, M.B., B.Ch., B.A.O.(Belf), D.P.H.(Eng.)

Chief Public Health Inspector : R. MARTIN, D.P.A.(London), M.A.P.H.I., Cert. Insp. Meat and Food.

> Deputy Chief Public Health Inspector : C. L. TAYLOR, M.A.P.H.I., Cert. Insp. Meat and Food.

> > Public Health Inspectors : G. G. COPLEY, M.A.P.H.I.\* W. E. FEATHERSTONE, M.A.P.H.I.\* A. PRESCOTT, M.A.P.H.I.\* A. G. PITT, M.A.P.H.I.\* F. TAYLOR, M.A.P.H.I.\* \*Cert. Insp. Meat and Food.

Pupil Public Health Inspectors : R. D. JOHNSON P. REEVES

Technical Assistant/Clerk of Works — Clean Air: L. J. WATTON (Commenced 25.4.1960)

#### Clerical Staff:

Chief Clerk—J. W. Evans (Retired 6.6.1960) Chief Clerk—D. A. JONES (Commenced 7.6.1960) Mrs. E. Hyde (Resigned 27.11.1960) Miss J. M. Finley (Resigned 11.12.1960) E. HASLAM (Commenced 9.5.1960) Miss N. M. Lowe (Commenced 5.12.1960) Miss J. A. WINN (Commenced 12.12.1960)

#### Pests Officer :

F. SHEPHERD (Resigned 31.10.1960)R. A. BELL (Commenced 28.11.1960)

#### ANNUAL REPORT of the MEDICAL OFFICER OF HEALTH for the Year 1960

PUBLIC HEALTH DEPARTMENT,

KING STREET, ECCLES. Telephone Eccles 2214.

TO THE MAYOR, ALDERMEN AND COUNCILLORS OF THE

BOROUGH OF ECCLES

Mr. Mayor, Ladies and Gentlemen,

Once more it is my privilege and responsibility to comment on the health of the Borough during the past year. The report is drawn up in accordance with instructions issued by the Minister of Health in Circular 1/61, and contains, therefore, all the routine yardsticks of the state of the public health which are calculated from the registration of births and deaths and the notification of certain diseases. Valuable and time-honoured though these statistics undoubtedly are, they leave unanswered many questions we would like to ask : they tell us nothing about the amount of *morbidity* in the town during the year; how much ill health and incapacity for work was caused by bronchitis, for example; and how much by coronary thrombosis. You will look in vain for any statistical assessment of rheumatism in this report, though it is to be hoped that through the operation of the Acute Rheumatism (Amendment) Regulations. 1959, Local Health Authorities and the Medical Research Council will in time accumulate useful information bearing upon the onset and incidence of this disease and the degree of incapacity it gives rise to.

To acknowledge the limitations of the set of tools we are provided with is by no means to say that they are unsuited to the job, and you will find much material for thought in the pages which follow. The infant mortality rate, the most sensitive available yardstick of the state of health of a community, stood at 23.6-an improvement on the average for the previous five years (28.4), but still obstinately higher than the national rate, which at 21.7 was lower than ever. Out of 634 deaths attributed to the Borough during the year, 100 were due to diseases of the respiratory system-cancer of the lung (37), bronchitis (37), pneumonia (21), and others (5). The death rate in Eccles from cancer of the lung (0.85 per 1,000) was 75% above the national rate (0.48); in view of this it seems appropriate to reiterate the point I made in my report to you four years ago, that since there is a clear cut relationship between cigarette smoking and the development of this disease, every effort should be made to prevent young persons from taking up the habit. Tuberculosis is one disease about which our statistical information is pretty complete, and it is gratifying not only to note the downward trends in both the incidence and the death rate but also to realise that there are only 208 cases currently on the Health Department register at the end of the year under report. Six years ago, at the end of 1955, there were 290 cases on the register. Many of these people are going out to work and have every prospect of making a complete and permanent recovery, thanks to modern methods of treatment. For the ninth successive year there were no cases of diphtheria, and for the second year running no cases of poliomyelitis-thanks to immunisation and vaccination. There was less whooping cough and less dysentery than in the previous year, but a greater number of cases of scarlet fever was notified (122) than in any previous year since 1943 (125); this is now such a mild disease, however, that no great significance should be attached to this fact.

On the environmental side, it has been most encouraging to note the tempo which has been maintained in slum clearance and re-development. The year 1960 has seen the confirmation of the remaining orders in the first slum clearance programme which, when drawn up in 1955, was intended to extend over a ten year period. Clearance and re-development have been efficiently phased and integrated, and the provision of newly-built, clean, and labour-saving homes for people who formerly lived in old, worn-out, ill-designed and defective houses has been a tremendous step forward, which is still proceeding. Possibly less spectacular, but hardly less important from the health point of view, is the drive for clean air; through the co-operation of the Housing Committee, the Housing Department, and the tenants of the Corporation-owned dwellings in the observance of a condition of tenancy that only authorised fuels might be burnt, the way has been paved for the introduction of Smoke Control Orders, which will have the force of law and which will ultimately cover the whole town.

In these and many other ways, the Department is contributing its share to the total effort which is being made by the Council to make Eccles a better, cleaner, and healthier place to live in. It is a pleasure to record my admiration of the hard work done by Mr. Martin and the staff, and my appreciation of the ready co-operation always forthcoming from other Departments. Our thanks are also due to you for your continued support and confidence throughout another year of progress.

> I am, Ladies and Gentlemen, Yours obediently,

August, 1961.

WILLIS J. ELWOOD, Medical Officer of Health.

#### STATISTICAL SUMMARY

1. GENERAL STATISTICS						
Area (in acres)						3,417
Population (Census 1961—Preliminary Report figure)						43,184
Population (Estimated 1960)						43,520
Number of Houses and Flats, 1960			1000 B			14,431
Rateable Value (December, 1960)						£491,107
Sum represented by a penny rate, 1960/61						£1,960
2. VITAL STATISTICS (See also comment fol	lowing, a	and Tab	oles I,	II and	III).	
Live Births:			M.	F		Total
Number		36	5	355		721
Rate per 1,000 population						16.6
Illegitimate Live Births per cent. of total live births						3.74
Stillbirths:						
Number		9	9	2		11
Rate per 1,000 total live and stillbirths						15.0
Total Live and Stillbirths		37.	5	357		732
Infant Deaths (deaths under 1 year)		10	)	7		17
Infant Mortality Rates:						
Total infant deaths per 1,000 total live births						23.6
Legitimate infant deaths per 1,000 legitimate live	e births					22.2
Illegitimate infant deaths per 1,000 illegitimate li	ive births					1.4
Neo-natal Mortality Rate:						
(deaths under 4 weeks per 1,000 total live births)						18.0
Early Neo-natal Mortality Rate:						
(deaths under 1 week per 1,000 total live births)						16.6
Perinatal Mortality Rate:						
(stillbirths and deaths under 1 week combined pe	r 1,000 to	otal live	e and s	tillbirth	is)	31.4
Maternal Mortality (including abortion) :						
Number of deaths						0.0000000
Rate per 1,000 total live and stillbirths						

#### PHYSICAL FEATURES OF THE DISTRICT

The area of the Borough is 3,417 acres. It extends from the Gilda Brook, which separates it from the City of Salford, westwards for a distance of four miles to the boundary of Irlam U.D. Its southern boundary is the Manchester Ship Canal, from which it extends northwards for a distance of 1<sup>3</sup>/<sub>4</sub> miles to the boundaries of Worsley U.D. and Swinton and Pendlebury M.B.

The area is flat, its maximum height above ordnance datum being 136 feet in Half Edge Lane, and its lowest point being below the 50-feet contour line in the neighbourhood of the old bed of the River Irwell at the west end of the Borough.

Barton Moss, which is about 75 feet above ordnance datum, has been drained and reclaimed by the Manchester Corporation Cleansing Department and now consists of fertile agricultural land, quite unsuitable for development owing to the difficulty in obtaining a solid foundation for buildings, the peat being 16 to 20 feet in thickness.

#### POPULATION

The population at the 1951 Census was 43,926 persons. The preliminary report on the 1961 Census shows a population of 43,184, a decrease of 742 persons. The estimated population for the year 1960, as computed by the Registrar General, was 43,520.

#### **OCCUPATIONS**

The principal occupations in which the population of the Borough is employed comprise commercial, professional and clerical occupations, a large proportion of these persons being employed in the Trafford Park industrial area. Many adult males are engaged in engineering and metal trades or are railway or transport workers, while a smaller number is engaged in textiles and building trades. Adult female workers are employed in clerical work and in textile and distributive trades.

#### BIRTHS (See Tables I and II)

The number of live births during 1960 was 721 (366 males and 355 females) as compared with 737 during 1959. This gives a live birthrate of 16.6 per 1,000 population, which is lower than the rate for the previous year (16.9) but shows an increase on the average rate (16.3) for the five years 1955/59.

#### STILLBIRTHS (See Table I)

The stillbirths numbered 11. The stillbirth rate was 15.0 per 1,000 live and stillbirths, as compared with 21.2 in 1959 and 31.4 in 1958.

## INFANT MORTALITY (See Tables I and II)

During 1960 there were 17 deaths of infants under one year of age, which gives an infant mortality rate of 23.6 per 1,000 live births. The infant mortality rate for the Borough in 1959 was 38.0, and the average rate for the five years 1955/59 was 28.4. The rate for England and Wales in 1960 was 21.7.

The neo-natal deaths, i.e. the number of deaths occurring in the first month of life, were 13 giving a neo-natal mortality of 18.0 per 1,000 live births, as against 29.9 for 1959.

The causes of death in the first year of life were atelectasis (6), birth injury (2), pneumonia (2), prematurity (1), and other causes (6) cases.

The perinatal deaths i.e. the number of stillbirths (11) plus the number of deaths occurring during the first seven days of life (12) were 23. This gives a perinatal mortality rate of 31.4 per 1,000 live and stillbirths for 1960.

#### **DEATHS** (See Tables I to IV)

The number of deaths at all ages during the year was 634, compared with 697 in 1959. The crude death rate was 14.6 per 1,000 of the population, compared with 16.0 in 1959. In recent Annual Reports it has been pointed out that from the beginning of 1953, on instructions from the General Register Office, deaths of persons occurring in hospitals for the chronic sick are attributed to the district in which the hospital is situated, irrespective of the original place of residence of the person concerned. The only hospital for the chronic sick within this Borough is Bridgewater Hospital. The inclusion by the Registrar General of the deaths which have occurred in this Hospital, in calculating the death rates for the district, has weighted unfavourably the crude death rates for 1953 and succeeding years. Such deaths numbered 127 in 1960. Under arrangements previously existing, however, some of these deaths would have been included in any case; comparison with previous years has, therefore, been somewhat difficult. For 1959 and subsequent years the General Register Office has agreed that

deaths of persons occurring in hospitals for the chronic sick who have been resident there for six months and over are attributed to the district in which the hospital is situated. Those who have been resident under six months are now attributed to the original place of residence of the persons concerned. This explains the reduction in the crude death rate for 1959 and 1960 as compared with the preceding six years.

From 1956 onwards, however, the "comparability factor" for deaths which the Registrar General has calculated for each district has taken into account the presence in any district of a chronic sick hospital and the age distribution of population. For Eccles the "comparability factor" is 1.03 and when the crude death rate of 14.6 is multiplied by this factor we get an *adjusted* death rate of 15.0 per 1,000 which it is legitimate to compare directly with the *adjusted* death rates of neighbouring districts and with the *adjusted* death rates for Eccles for preceding and succeeding years. The adjusted death rate for Eccles in 1959 was 13.8.

Deaths from pulmonary tuberculosis numbered 3. Deaths from pneumonia and bronchitis totalled 58. Deaths from cancer of the lungs and bronchus were 37, against 32 in 1959, and from other forms of cancer were 101 against 80 in 1959.

29 deaths occurred in infants or children under the age of 15 years; 399 occurred in persons aged 65 or over.

Accidental deaths totalled 16, compared with 25, 22, 19, 17 and 25 in the previous five years.

An analysis of the deaths from accidental causes in 1960 shows that 2 were due to burns, 9 were due to moving vehicles and 5 to other causes.

#### MATERNAL MORTALITY

There were no deaths attributable to childbirth in connection with the 732 (live and still) births which occurred in 1960.

The maternal mortality rate for England and Wales in 1960 was 0.39 per 1,000 (live and still) births.

#### CANCER

The number of deaths which have been due to this cause (including leukaemia) in recent years has been as follows :---

		1956	1957	1958	1959	1960
Cancer of stomach		9	19	22	21	21
Cancer of lung, bronchus		27	29	26	32	37
Cancer of breast		15	10	14	9	10
Cancer of uterus		7	14	10	7	6
Cancer of other sites		61	65	65	39	63
Leukaemia, aleukaemia		4	1	5	4	1
Total	s	123	138	142	112	138

This gives for 1960 a cancer mortality rate of 3.17 per 1,000 compared with 2.57 per 1,000 in 1959. The national rate for 1960 was 2.16 per 1,000. The 37 deaths from cancer of the lung and bronchus give for Eccles a mortality rate from this cause of 0.85 compared with the national rate of 0.48.

#### **PREVALENCE AND CONTROL OF INFECTIOUS DISEASES**

There were 1,047 notifications of infectious diseases (including tuberculosis) during the year, as compared with 798 during 1959.

The distribution of these cases as between various age groups and in the various wards of the town is shown in Table V, while in Table VI the infectious diseases experience of 1960 is seen along with that of the preceding 20 years.

There were 50 cases of sonne dysentery compared with 83 in 1959 and 213 in 1958. Thirteen of these cases were in the 5—10 year age group. The control of this mild but highly infectious disease is extremely difficult among young children. It appears to spread directly from child to child through personal contact and through the medium of inanimate objects such as toys, books and lavatory seats. The provision of adequate washing facilities in all our schools (with hot as well as cold water) is the first essential. Although some improvement has been made in recent years, it is disappointing to record that there are still 8 schools within the Borough with unsatisfactory washing facilities. Of primary importance is the inculcation of the habit of hand-washing after visiting the toilet which should be so effective that it becomes an automatic routine about which the child does not need to think. It is hoped that the continued provision of satisfactory housing accommodation, where adequate facilities for hand-washing are available, will assist in the control of this disease.

The diseases appearing in epidemic proportions were measles and scarlet fever. There were 764 cases of measles notified during the year, as compared with 462 during 1959. Since 1953 this disease has appeared in epidemic proportions in alternate years, and on this evidence it appeared that 1960 would be comparatively free from this disease. This, however, was not the case.

During the year 122 cases of scarlet fever were notified as compared with 66 in 1959.

No other disease appeared in epidemic proportions, and it is pleasing to note that for the ninth year in succession no case of diphtheria was notified.

#### TUBERCULOSIS

Statistical particulars relative to the incidence of tuberculosis are given in Tables VII, VIII and IX. It will be seen that 16 new cases were notified during the year (15 respiratory and 1 non-respiratory), and that there were 3 deaths (all respiratory). From Table VII it will be seen that the death rate from tuberculosis in 1960 was a little lower in Eccles (0.068 per 1,000) than in England and Wales (0.075 per 1,000); the death rate from respiratory tuberculosis was the same in Eccles as that in England and Wales (0.068 per 1,000).

From Table VIII it will be seen that there were, as at the end of 1960, 181 persons in Eccles suffering from respiratory tuberculosis, and a further 27 suffering from the non-respiratory form of the disease.

Modern methods of treatment have very dramatically reduced the death rate from this disease, as can be seen from Table IX. Unfortunately, however, it happens in a minority of cases that though the treatment prolongs life for many years it does not effect complete cessation of activity of the disease and the patient passes into a stage of chronic infectivity. Such sufferers from tuberculosis have a moral duty to the community to ensure that they do not pass on their infection to others. Respiratory tuberculosis is an infectious disease to which young children and adolescents are particularly susceptible. Here again the effect of slum clearance with the consequent re-housing of families in adequate accommodation, where isolation of chronic cases is possible, will assist in the control of the disease.

#### VACCINATION AND IMMUNISATION

#### Vaccination against Smallpox

Infant vaccination gives a measure of protection to the individual for many years; should the disease be contracted subsequently it is generally in a modified form and a fatal issue is unlikely.

The following figures show the number of vaccinations done in the District during 1960 and the previous two years : 1960 1959 1958

(a)	Number of primary vaccinations			 212	386	359
(b)	Number of re-vaccinations			 65	78	97
(c)	Number of infants under 1 year incl	luded in	n (a)	 145	324	270

#### Immunisation against diphtheria, whooping cough and tetanus

Under arrangements made by the County Council, parents have the choice of having children immunised from the age of four months

(1) by a "triple "vaccine giving protection against diphtheria, whooping cough, and tetanus;

(2) by a " combined " vaccine against diphtheria and whooping cough ;

(3) against whooping cough only ;

- (4) against diphtheria only;
- (5) against tetanus only;
- (6) against diphtheria and tetanus;

(7) against whooping cough and tetanus.

In the case of "triple", "combined " or whooping cough immunisation, three injections are given at intervals of not less than one month.

These protective injections are given free of charge at Clinics and by general practitioners at their surgeries. The County Council pays a fee to general practitioners for sending in a record card containing particulars of these immunisations.

The following table shows the number of children who were immunised during the year.

	Primary	Reinforcing
Whooping Cough only	_	
Tetanus only	-	-
Whooping cough and tetanus	1	-
Diphtheria only	2	388
Diphtheria and whooping cough " combined "	11	6
Diphtheria, whooping cough and tetanus " triple "	561	104
Diphtheria and tetanus	57	121
Total diphtheria immunisations in 1960	631	619
	728	

#### Vaccination against Poliomyelitis

Under arrangements made by the County Council in accordance with instructions from the Ministry of Health, vaccination was offered during the year to all persons who have not at the time of their application for vaccination reached the age of forty and also to the following small groups :---

- (a) Persons going to visit or reside in a country outside Europe, other than Canada or the United States of America.
- (b) Practising dental surgeons, dental students, dental hygienists, student hygienists, dental surgeons' chairside assistants, and their families.
- (c) Practising nurses not working in hospitals and their families.
- (d) Public health staff who might come into contact with poliomyelitis cases, and their families.

Up to the end of the year a total of 11,453 residents had been vaccinated (by two injections) since the inauguration of the scheme; 1,495 of these vaccinations were done during the year under report. During the year 2,670 third injections were given.

#### Vaccination against Tuberculosis

Under arrangements made by the County Council, parents of children about to leave school may be invited to consent to their children being skin-tested for susceptibility to tuberculosis, and to their being vaccinated against tuberculosis with B.C.G. vaccine if the skin-test shows them to be susceptible to this disease. During 1960, 837 school children were skin-tested in this manner, 755 of them were found to be susceptible to tuberculosis and 755 of them were vaccinated with B.C.G. During the year B.C.G. Vaccination was extended to school children of 14 years of age and upwards and to students attending turther education establishments. Any questions about B.C.G. should be raised with the School Medical Officer at the clinic.

#### NATIONAL ASSISTANCE ACT, 1948

Section 47 of this Act, as amended in 1951, gives power to remove compulsorily to hospital or Part III accommodation persons in need of care and attention, which they are unable to provide for themselves and which they are not receiving from other persons.

Action is only taken as a last resort when a person is in an advanced state of neglect and is unwilling to go voluntarily.

Five cases were investigated, two were resolved informally, and three orders were necessary during the year.

#### LOCAL GOVERNMENT SUPERANNUATION ACTS 1937-1953

Forty-eight medical examinations of persons for admission under the above Acts were made during the year.

#### SAFETY IN THE HOME

Including the Annual General Meeting held in the Town Hall on 19th January, 1961, four meetings of the Eccles Home Safety Committee were held during the year.

At the Annual General Meeting an address was given by Mr. L. W. Piper, Assistant Divisional Accident Prevention Organiser of the Royal Society for the Prevention of Accidents, entitled 'Problems facing those involved in Home Safety teaching'. Mr. Piper quoted figures which revealed that more than 6,000 accidents, with fatal results, occur in the home due to falls, cuts, burns, scalds and suffocation. He emphasised the fact that the greatest number of home accidents were due to falls, and it can be seen from the figures below that this is the case in Eccles.

During the course of the quarterly meetings, may points of interest have come to light, and many problems raised by members were adequately dealt with in committee.

The committee are appreciative of the co-operation of the Royal Society and the County Medical Officer's Department, as a result of which, a perfect liaison is being maintained by way of display material and propaganda.

I must acknowledge the keen interest in home safety matters shown by Mr. J. W. Box, the Road Safety Officer, in his capacity as secretary to the Eccles Home Safety Committee. The number of cases which were conveyed to hospital by ambulance during the past five years as a result of home accidents was as follows :---

	1960	1959	1958	1957	1956
Total cases in children under 3 years	 19	18	27	9	26
Total cases in children 3 to 15 years	 30	28	37	10	33
Total cases in persons 15 to 60 years	 17	19	27	14	42
Total cases in persons over 60 years	 16	22	16	8	29
Total cases in persons of unknown age	 55	31	21	88	21
	137	118	128	129	151

The cause of the accidents may be summarised as follows :----

		Falls	Scalds	Burns	Wounds	Miscellaneous	TOTAL
1960	 	 63	13	9	23	. 29	137
1959	 	 63	13	4	12	26	118
1958	 	 67	11	8	13	29	128
1957	 	 62	7	9	18	33	129
1956	 	 80	10	7	32	22	151

It is regrettable to note that after four years of decreasing home accidents reported, the number has risen from 118 in 1959 to 137 in 1960.

# GENERAL PROVISION OF HEALTH SERVICES IN THE AREA I. Services provided by the Manchester Regional Hospital Board

#### 1. HOSPITALS

Eccles and Patricroft Hospital is an acute general hospital, and Bridgewater Hospital provides beds for chronic sick and mental cases. The Borough is served in the main by the following hospitals:

- (a) General—Salford Royal Hospital; Park Hospital, Davyhulme; Eccles and Patricroft Hospital; Hope Hospital, Salford.
- (b) Infectious Diseases-Ladywell Hospital, Salford; Monsall Hospital, Manchester.
- (c) Maternity-Park Hospital, Davyhulme; Hope Hospital, Salford.

# 2. TUBERCULOSIS SERVICES

While certain aspects of this work, more particularly the domiciliary visiting of cases and contacts, come within the province of the Divisional Medical Officer, the Regional Hospital Board does provide the following :—

- (a) Chest Clinic, Hope Hospital, Salford. New cases, referred by their family doctors, attend by appointment.
- (b) Mass Miniature Radiography Surveys are carried out periodically in the District by the Board's No. 4 Unit, which is based on Bolton.
- 3. VENEREAL DISEASES CLINIC

St. Luke's Clinic, 11, Duke Street, Liverpool Road, Manchester, 3.

## II. Services provided by the Local Health Authority

Eccles is one of the three constituent districts of Lancashire County Council Health Division No. 15, which in addition includes the Borough of Swinton and Pendlebury and the Urban District of Worsley.

The services which are provided by the County Council are as follows :--

- 1. Care of Mothers and Young Children : this includes ante-natal and child welfare clinics, dental care, distribution of welfare foods and day nurseries.
- 2. School Health Service.
- 3. Midwifery.
- 4. Health Visiting.
- 5. Home Nursing.
- 6. Vaccination and Immunisation.
- 7. Ambulance Service.
- 8. Prevention of illness, care and aftercare : this includes the chiropody service, health education, loan of nursing equipment, and convalescence for those who have been ill.
- 9. Home Help Service.
- 10. Mental Health.
- 11. Arrangements for the welfare of blind, deaf and dumb, crippled and handicapped persons.
- 12. Provision of Residential Accommodation for the Aged and Infirm.

Your Medical Officer of Health, in his capacity as Divisional Medical Officer, is the Officer locally responsible for the administration of these services, and any enquiry in regard to them should be addressed to him :— Dr. W. J. ELWOOD, D.P.H.,

Divisional Medical Officer, Lancashire County Council Health Division No. 15, 33, Green Lane, PATRICROFT. Telephone ECCles 2651. A brief resumé of the above services as available to residents in Eccles is given below (and in the order in which they are named above) :—

SERVICE	CENTRE	HOURS OF ATTENDANCE
ANTE-NATAL & POST NATAL	Green Lane Clinic, Patricroft.	Wednesday 9 a.m. to 11.30 a.m. Thursday 9 a.m. to 11.30 a.m. Friday 9 a.m. to 11.30 a.m.
CHILD WELFARE	<ol> <li>Green Lane Clinic, Patricroft.</li> <li>Abbey Grove, Eccles.</li> <li>St. Mary Magdalene's School, Catherine Street, Winton.</li> </ol>	Monday 2 p.m. to 4 p.m. Tuesday 9 a.m. to 11.30 a.m. Thursday 2 p.m. to 4 p.m. Tuesday 2 p.m. to 4 p.m. Wednesday 2 p.m. to 4 p.m.
DENTAL	Hyde Lodge Clinic, Clarendon Road, Eccles.	By Appointment.
VACCINATION AND IMMUNISATION (including poliomyelitis)	<ol> <li>Hyde Lodge Clinic, Clarendon Road, Eccles.</li> <li>Green Lane Clinic, Patricroft.</li> </ol>	By Appointment. By Appointment.
MINOR AILMENTS	Hyde Lodge Clinic, Clarendon Road, Eccles.	Monday to Friday 9 a.m. to 11.30 a.m. Medical Officer in attendance Monday.
OPHTHALMIC	Hyde Lodge Clinic, Clarendon Road, Eccles.	Cases referred by School Medical Officer.
ORTHOPAEDIC	Green Lane Clinic, Patricroft.	Cases referred by School Medical Officer.
ORTHOPTIC	Green Lane Clinic, Patricroft.	Cases referred by School Medical Officer.
SPEECH THERAPY	Green Lane Clinic, Patricroft.	Cases referred by School Medical Officer.

MATERNITY AND CHILD WELFARE AND SCHOOL HEALTH SERVICE

#### VACCINATION AGAINST POLIOMYELITIS

In addition to the arrangements indicated above, adult members of the public, below the age of 40, may attend, without prior appointment, at "Beechfield Clinic" Folly Lane, Swinton, on the first Tuesday in any month, between 5-30 and 6-30 p.m.

Persons of any age (including those over 40) may arrange to be vaccinated by their family doctor.

#### MIDWIFERY

Mrs. V. J. Dickenson	 86, Liverpool Road, Eccles	 	Eccles 4128
Mrs. D. Dodd	 31, Westwood Crescent, Eccles	 	Eccles 3834
Miss D. A. Noblett	 93, Westwood Crescent, Monton	 	Eccles 3972
Mrs. M. Ryan	 36, Brookhouse Avenue, Peel Green	 	Eccles 2447
HEALTH VISITORS			

Miss A. W. M. Fido ... ... Miss J. McMullen ... ... Mrs. L. M. Milne, (Part-time)... Miss N. Wilkinson ... ... Mrs. V. Wildig ... ...

#### HOME NURSES

					i evepnone ivo.
Mrs. E. Fulton .			5, Winster Road, Peel Green	 	 Eccles 1680
Mrs. M. Halliday .			134, Wellington Road, Eccles	 	 Eccles 3009
Mrs. G. E. McDougall			9, Blantyre Avenue, Walkden	 	 Walkden 5060
Mrs. M. J. Thorniley .			13, Richmond Grove, Eccles	 	 Eccles 3623
Male Nurse : Mr. L.	S. Le	ster	10, Fletcher Avenue, Clifton	 	 Swinton 2503

#### AMBULANCE SERVICE

In an emergency anyone may call an ambulance, by going to the nearest telephone and dialling 999.

In non-urgent cases requests for ambulance transport can only be made by a doctor, midwife, responsible hospital official or dentist.

The telephone number is :--Swinton 4343.

#### CHIROPODY SERVICE

A Chiropody Service is available for those who are aged, for registered handicapped persons and for expectant mothers. Application should be made to the Welfare Clinic, 14—18, Green Lane, Patricroft.

#### III. Services provided by the Lancashire Executive Council

Enquiries regarding these services should be addressed to the Secretary, Lancashire Executive Council, 42, West Cliff, Preston. Lists showing the names of family doctors, dentists, pharmacists and opticians who are under contract with the Council can be seen at any Post Office or Public Library.

#### IV. Public Health Laboratory Service

Public Health Laboratory, Monsall Hospital, Newton Heath, Manchester, 10.

The results of samples and specimens submitted to the Public Analyst and to the Public Health Laboratory Service are set out in Tables XVII, XVIII and XX in the Appendix.

#### V. Public Baths

There are two swimming baths ; the larger pool containing approximately 66,000 gallons, and the smaller pool 52,000 gallons. The water from both pools, which is obtained from mains supply, is circulated by an electrically-operated pump to three 8 ft. Bell's Pressure Filters, which are capable of dealing with 24,000 gallons per hour. En route to the filters the water is chlorinated, and alum is added. After filtration, soda is added, and the water is heated and aerated. The whole of the water in the two baths can be passed through in five hours. The treatment of the water is controlled by regular estimations of the pH value and the amount of available chlorine. In addition to the two bathing pools, there are 20 slipper baths for males and 16 for females. The results of the samples of swimming bath water taken during the year are shown in Tables XVIII and XX(c).

#### VI. Services provided by Voluntary Organisations

The Eccles Old People's Welfare Association (Hon. Secretary Mr. J. E. Greasby, 4, Nasmyth Road, Barton, Eccles) provides a residential hostel for 38 old people. There are five "Over 60" Clubs in the area all affiliated to this Association.

Other organisations which may help in meeting particular needs are :--British Legion (Eccles Branch) ...British Legion Club, Chadwick Road, Eccles. ... ... British Red Cross Society ... ... Hon. Secretary: Mr. J. Johnson, 22 Watson Street, ... .... Eccles. Cripples Help Society ... Eccles Civic Guild of Help ... ... Hon. Secretary : Mr. J. E. Keaveny, Barrister-.... ... at-law, 81, Houghton Lane, Swinton. Eccles & District Society for Mentally Hon. Secretary: Mrs. M. Wolfenden, 11 Tarn Handicapped Children ... Grove, Worsley. ... Forces Help Society & Lord Roberts Workshops...District Head : Mr. C. R. Revans, Rutland House, Rutland Road, Eccles. Manchester & Salford Blind Aid Society ... ...30, Tonman Street, Manchester, 3. Soldiers', Sailors', Airmen's Families Association ... Hon. Secretary : Mr. H. R. Bailey, Town Hall, Eccles. The St. John Ambulance Brigade ... ... ...St. Andrew's School, Eccles. Hon. Secretary: Mr. A. Bowling, 61, Bolton Road, Urmston & District Group National Spastic ... Salford, 6. Society ... ... ... ... Women's Voluntary Services ...Centre Organiser: 14 Abbey Grove, Eccles.

#### REPORT OF THE CHIEF PUBLIC HEALTH INSPECTOR

TO THE MAYOR, ALDERMEN AND COUNCILLORS OF THE

BOROUGH OF ECCLES

Mr. Mayor, Ladies and Gentlemen,

I have great pleasure in presenting for your consideration my fourth Report on the environmental health services, and on the refuse collection and disposal service, for the year ended 31st December, 1960.

The general outline of the report is similar to previous years and includes several statistical tables and other information which are intended to convey some idea of the multifarious duties for which the department is responsible.

I am pleased to say that the professional staff of the department has remained unchanged during the year. The clerical staff is much changed. Mr. J. W. Evans (Chief Clerk) retired after many years of loyal service; his deputy, Mr. D. A. Jones, was appointed as Mr. Evans' successor, and Mr. E. Haslam, formerly a member of the staff of the Borough Treasury, was appointed to fill the vacancy. The clerk-typist and the junior female clerk resigned, and were replaced by qualified senior and junior short-hand typists, who, in the short-time since their appointment, have made their own contributions to the efficiency of the department.

During the last few years there has been a succession of new legislation, which has increased greatly the volume and complexity of the routine clerical work. Comprehensive records must be kept and, if they are to be of value, maintained. The value of these records becomes obvious when it is found possible to produce information quickly. That we are able to do this speaks well for those responsible. The assistance given to the clerical staff by the pupil public health inspectors has been much appreciated.

During the year great emphasis has been placed on the importance of the abatement of atmospheric pollution. The public are now clean-air conscious and any apparent contravention of the Clean Air Act is soon reported to the department. Complaints are investigated by the clean-air inspector (Mr. F. Taylor) and due in the main to his wide and varied knowledge of plant and of his method of approach, I am satisfied that much has been achieved and that the goodwill of the industrialists has at the same time been retained. Our aim is to achieve clean air over the whole town. We prefer to reach our goal by advice, assistance and co-operation, but legislation provides us with another weapon which we are loath to use except as a last resort. We wish to make Eccles into into one large smoke-controlled area within the next 10 years or so. Private dwellings, commerce and industry each have a part to play. Judging from the progress which has already been made, I am satisfied that we shall succeed. A Technical Assistant/Clerk of Works, with responsibility for the inspection of dwelling houses included in the proposed smoke controlled areas, was appointed during the year.

The refuse collection service has maintained its high standard of efficiency. The public now accept a weekly collection of refuse as a normal service. Few complaints are received, although slight delays and re-routing of vehicles, due to bank holidays, soon brings forward anxious enquiries. I tender my sincere thanks to the refuse collection and disposal staff, who have tried so hard to maintain the service, and to the members of the Joint Consultative Committee whose meetings have always been conducted in a friendly atmosphere, and who have, in their deliberations, always borne in mind their objective - "to improve the efficiency of the service and the welfare of the employees".

I regret to report that some of the routine duties, which, however, constitute the real back-bone of the service have been somewhat neglected during the last few months of the year, due chiefly to the urgency attending the preparation of a comprehensive slum clearance programme, which necessitated a complete survey of the borough. Very much of the lost ground has been recovered at the time of writing and the appointment of another inspector will assist in reducing the arrears. Already a re-survey of premises covered by the Food Hygiene Regulations is in progress.

In conclusion I wish to express my sincere thanks to the Chairman, who has answered my every request for advice or assistance, to the Vice-Chairman, and to the members of the Public Health Committee for their continued support. I wish to express my appreciation of the co-operation extended to me by Dr. Elwood and of the loyal support of Mr. C. L. Taylor, my deputy, and other members of the staff. To the other officers of the Corporation, and particularly to Mr. J. W. Parr, the committee clerk, I express thanks for their advice and co-operation always so readily given.

I am, Mr. Chairman, Ladies and Gentlemen.

Your obedient servant,

REGINALD MARTIN, Chief Public Health Inspector.

August, 1961.

19

#### **REPORT OF THE CHIEF PUBLIC HEALTH INSPECTOR**

#### 1. HOUSING

#### (a) Slum Clearance (Table XII)

Full details of clearance areas and individual unfit houses in respect of which orders are operative at the date of preparing this report will be found in Table XII.

The continuous re-housing of the tenants from these houses is taking place as and when suitable accommodation becomes available.

The year 1960 has seen the confirmation of the remaining orders in the first slum clearance programme which, when formulated in 1955, was intended to extend over a ten year period. A few individually unfit houses remain to be dealt with during 1961.

During the year 128 unfit houses and 7 other houses in clearance areas, and 31 individual unfit houses were demolished. A total of 484 persons were displaced from these houses.

A comprehensive survey of almost 3,000 houses has been carried out and this has resulted in the formulation of a slum clearance programme comprising 881 houses which the Council have agreed shall be dealt with during the five year period 1961-1965. This programme has been confirmed by the Ministry of Housing and Local Government. In addition two further provisional slum clearance programmes have been compiled for the five-yearly period 1966-1970 and 1971-1975, comprising 871 and 424 houses respectively.

#### (b) Sanitary Defects and Disrepair (Tables XIII and XIV)

The total number of dwelling houses inspected during the year was 8,555 and 11,252 inspections were made for that purpose. The number of complaints investigated was 477. As a result of notices served 333 houses were made fit.

As more and more of the older houses are dealt with in clearance areas, coupled with the effects of the Rent Act, the tenor of complaints received in respect of disrepair and nuisances appears to be of a less serious nature than heretofore. The majority of complaints are remedied informally and it was only necessary to institute legal proceedings on four occasions during the year. Nuisance orders were obtained in each case.

#### (c) Rent Act, 1957 (Table X)

Only 3 applications for certificates of disrepair were made in 1960 compared with 35 in 1959, 71 in 1958 and 119 in 1957; 2 certificates were issued and 5 certificates were cancelled during the year. During the year 11 forms "G" were issued to tenants, making a total of 1,700 forms issued since the Act became operative. On this evidence it would appear that the Act has outlived its usefulness, and that many tenants, whose rents have been increased, do not realise that the procedure, as outlined in the Act, can be used at any time.

It will be remembered that the local authority acts only in an intermediary capacity between landlord and tenant and only proceeds as laid down in the Act when tenant and landlord have failed to agree. The lists of defects of repair prepared by the tenants are often inadequate, and often contain only minor items which are an "annoyance" to the tenant. Major items such as pointing are sometimes overlooked. When premises are inspected under this Act, any nuisance discovered, whether entered on the form "G" or not, are followed up using Public Health Act procedure. This enables the urgent repairs to be carried out more speedily even though an undertaking may have been given by the landlord promising to do the work in the ensuing six months.

The majority of houses becoming decontrolled under Section 11 of the Act are put up for sale, but where new tenancies, leases or agreements are created, it is known that often clauses are included making the tenant responsible for internal repair. These arrangements are being considered in the Housing Bill at present before Parliament which includes provisions to relieve tenants of the responsibility for the repair of the structure and exterior of his premises and of certain main installations.

#### (d) Houses Let-in-Lodgings

Several houses, which are let-in-lodgings or are occupied by more than one family, were inspected during the year. Many of the houses were, with respect to facilities provided for the households accommodated therein so far defective as not to be reasonably suitable for occupation by those householders. The procedure is to serve a notice under section 36 of the Housing Act, 1957 on the persons "having control" of the houses. The Housing Bill proposes amending legislation designed to regulate houses in multiple occupation.

# (e) Improvement Grants (Housing Act, 1957, Housing (Financial Provisions) Act, 1958, House Purchase and Housing Act, 1959).

There are now two kinds of grant available for improving or modernising structurally sound older houses.

(1) The "Standard Grant" under which house owners can obtain half the cost, up to a maximum of  $\pounds 155$ , of installing 5 basic improvements; viz: a fixed bath or shower in a bathroom, a wash hand basin, a hot water supply, a water closet in or contiguous to the dwelling and satisfactory facilities for storing food. The grant is subject to the dwelling (a) not being already provided with these amenities, and (b) that the dwelling is not unfit for human habitation and that it is likely to remain fit and available as a dwelling for a period of not less than 15 years.

(2) The "Discretionary Grant" under which up to half the estimated cost of more extensive improvements may be paid at the discretion of the Council up to a maximum of  $\pounds 400$ .

Grants are subject to each dwelling having (a) at least  $\pm 100$  spent on improvements, (b) having a useful life in excess of 15 years and (c) satisfying 12 other conditions as to fitness and amenities.

During 1960, 1 application for a discretionary grant was received and approved and 43 applications for standard grants were received of which 32 were approved.

As in previous years applications are not being received from the owners of the many suitable premises in the town which could benefit from this scheme.

#### (f) Disinfection and Disinfestation of Premises

#### (i) Disinfection

During the year 14 houses were disinfected following cases of infectious disease. 62 library books were brought to the Department for disinfection.

#### (ii) Disinfestation

A total of 196 premises, of which 89 were houses owned by the Corporation, were visited and treated by the Pests Officer to eradicate insect pests. In 64 cases disinfestation of the household effects using Hydrogen Cyanide were carried out by a private firm, previous to re-housing of the families.

#### (g) Sanitary Accommodation in Dwelling Houses

The estimated numbers, and variety of conveniences are as follows :---

Fresh-water flushed closets	 17,828
Waste-water flushed closets	 20
Pail-closets	 40
Dustbins	 16,500
Baths	 10,582

The majority of the waste-water flushed closets are in the Park Street and Liverpool Road areas. These are being converted, as they become defective. The pail closets are mostly at houses and farms in the Barton Moss area. Manchester Corporation, who are the owners of the land, plan to construct small treatment plants to serve suitable groups of premises. The first has already been constructed,

#### 2. ADMINISTRATION (Tables XIII and XIV)

During the year, 17,852 primary inspections or inquiries and 3,732 re-visits were made. The number of defects or nuisances discovered was 25,984; this figure includes defects discovered during the survey of houses which were subsequently included in a slum clearance programme. 3,287 defects or nuisances were remedied or abated in houses not subject to slum clearance proposals. A total of 564 informal letters or notices were sent out, and in 136 instances the service of Statutory Notices was necessary, as indicated below :—

Act and Section under which served	No. served in year	No. abated in year	No. of Prosecutions
Public Health Act, 1936, Sec. 39	42	30	
Public Health Act, 1936, Sec. 45	10	6	
Public Health Act, 1936, Sec. 93-103	103 84 63	4	
	136	99	4

During 1960, 659 land charge searches were completed and 800 inquiries relative to the "life" of property in the Borough were dealt with.

#### (a) General

#### 3. ATMOSPHERIC POLLUTION (Table XV)

Schemes for controlling domestic smoke need to be prefaced by patient, persistent and varied propaganda designed to enlighten and educate the public to an awareness that smoke pollution is of their making and that the remedy lies in their hands. Clean Air Exhibitions, film shows, articles in the local press, poster displays and hand-outs are designed to do this, yet the ordinary man in the street, and his wife in the home, continue to have only the vaguest understanding of the air pollution problem. They readily succumb to the sniping which follows. Worked on, and often encouraged, by vested interests, reasonable doubts are formed into agitation which, naturally enough, receives press publicity and tends to seem much bigger than it really is. The pattern is becoming familiar — complaints about smokeless fuels (as though complaints about coal had never been heard of), their supposed dangers and other drawbacks, the sulphur "red herring" and finally the demand, in the name of liberty, to continue to pollute the air. All this has not happened yet in Eccles on an organised scale, but other towns have experienced it and been put to considerable expense and inconvenience.

Merchants selling solid fuel now seem to be adopting a more reasonable attitude and are beginning to realise that their interests lie in preserving the solid fuel market in competition with gas, electricity and oil. It is small wonder that the impression is sometimes gained that local authorities are not implementing the industrial provisions of the Clean Air Act, but are concentrating their energenies on the domestic problem, when all that is ever known of the ceaseless efforts to reduce pollution from industrial sources and prevent new ones is an occasional press report of a prosecution for excessive smoke emission.

Time was when smoke production throughout the country was equally of industrial and domestic origin. Since the Clean Air Act much vigour has been displayed towards industrial smoke suppression. Industrialists now realise the economic advantages of a clean chimney stack; so much so that latest appraisals show domestic smoke to exceed that from industry by some 20 to 25 per cent.

This has been achieved mainly through the introduction of automatic stoking of furnaces, coupled with overhaul of steam generating and utilising systems. Adequate maintenance and proper control is necessary to produce satisfactory results. Attention to such matters is of the utmost importance with oil-firing.

There have been several cases in the Borough where neglect of these factors would have been responsible for serious situations developing but for early detection and investigation.

In the course of the 444 smoke observations carried out in the Borough during the year 28 offences against the Dark Smoke (Permitted Periods) Regulations were detected, involving ten coal fired furnaces, seven oil fired installations, six railway locomotives, three vessels using the Manchester Ship Canal, one incinerator and a boiler furnace burning coke breeze. Breakdown was the cause in only one case. The mixing of different qualities of fuel oil produced disasterous results in two cases. Storage tanks and pipe-lines should be drained off and cleaned out and filters renewed before changing to a different type of oil.

At one large works with numerous furnaces considerable improvement followed a lecture to the furnace operators, who, although experienced men, did not always pay due regard to the quality of smoke produced.

In all 87 visits have been made for the purpose of inspecting furnace plants.

There were six prosecutions for excessive smoke production.

The salutory effect of successful prosecutions in respect of two railway locomotives, followed by disciplining of the offending employees has been quite remarkable at the local Motive Power Depot, though this will remain a plague spot so long as a score or more engines, each emitting its quota of permissible smoke, are congregated in one small area. Fortunately many of the locomotives passing through the town or working on railway sidings are now diesel operated.

Eight applications for approval of new furnace installations were granted. A severe grit nuisance referred to in last year's report has been eliminated. Prior knowledge of one proposal to instal a boiler-plant led to abandonment of the scheme in favour of electricity.

Smoke nuisances are occurrences distinct from dark smoke offences. The generally arise from the burning of refuse in the open, or emission of smoke at low level. Gardeners should compost their refuse; tradesmen should equip themselves with reliable disposal units if they do not wish to avail themselves of the refuse collection facilities available to them. Verbal or written warnings were issued in those cases which came to the department's knowledge.

The problem of atmospheric pollution by industrial effluvia becomes more complex with the ever increasing number of polymorphic substances being produced. Rarely injurious to health, their periodic intrusion on our comfort is not always capable of being handled by rule of thumb methods.

Solutions have often to be found through the medium of protracted research and drawing upon the experience of others. Coupled with the devising, designing and installation of curative equipment, this can take up a lot of time. The heavy expenditure involved must be justified by a conviction that a high degree of success will be attained, for quite low concentrations of some industrial gases can produce great discomfort to certain people.

Caution must therefore be exercised in predicting the ultimate outcome of developments concerning a cooking odour pervading the atmosphere of Eccles and adjoining areas, and another having a more localised effect.

Whilst those who find it is an advantage to reside in industrial areas must be tolerant and accept as inevitable the fact that odours of industry cannot be entirely and permanently eliminated, they are entitled to demand that industry will take reasonable steps to "sweeten its breath".

The involved procedure for the establishment of Smoke Control Areas demands the greatest patience from those who are keenly enthusiastic for this method of smoke control. They can take heart from the recent edict which eliminates the necessity to submit proposed schemes to the Ministry of Housing and Local Government for preliminary sanction. As this also makes a preliminary survey of premises unnecessary, the amount of time saved with each Order can be three to six months.

#### (b) Smoke Control Areas

The following table shows the position, at the time of preparing this report, of the Council's phased 10 year smoke controlled area programme.

	Delef	Type of Premises							
Area No.	Brief Description	Dwellings	Industrial	Commercial	Other	Acreage	Date Operative		
14	Brookhouse Estate	638	2	6	3	122	1.10.61		
1в	All other land west of M.62	235	8	29	6	1,433	1.1.62		
2	Ellesmere Park Estate	573	2	7	_	92	Awaiting con- firmation		
		1,446	12	42	9	1,647			

At 1st July, 1961, 569 dwellings owned by the council, and mostly in the Cawdor Street/Barton Lane redevolopment area were "smokeless" by tenancy agreement.

#### 4. INSPECTION AND SUPERVISION OF FOOD (Tables XVI to XXII)

## (a) General

Routine inspections continued of all the various food premises to ensure compliance with the Food Hygiene Regulations and Byelaws.

Generally, the co-operation of the shopkeepers, and the necessary compliance with the requirements of the regulations is obtained. The hygienic standard of the majority of the shops is quite commendable, and many refrigerators and deep-freeze cabinets are in use.

More and more foodstuffs are now appearing pre-packed, and the quantities of deep-frozen food sold appears to be increasing.

There were no cases of food poisoning notified during the year.

During 1960, 13 complaints were received and investigated in respect of food containing foreign bodies, etc. Most were dealt with informally following investigation, and, after duly being reported to the Committee, warning letters were sent to the vendors responsible.

It was not necessary to institute legal proceedings in any of these cases.

#### (b) Sampling of Food and Drugs (Table XVII)

164 samples of food and drugs were submitted to the Borough Analyst during the year. This number included 120 samples of milk, 37 samples of other food and 7 samples of drugs. Three samples were reported by the Borough Analyst to be unsatisfactory. Details of these samples and observations thereon is as follows :—

Sample No.	Description	Nature of adulteration or irregularity	Observation
3092	Ice-Cream	Contained undeclared non- milk fat	Manufacturer to declare its presence on the wrapper
3122	Pork Luncheon Meat	16.5% deficient of meat when compared with a meat content of 80%	Retailer cautioned
3041	Tuberculin Tested (Channel Island) Milk	$10{\cdot}0\%$ deficient of fat	Supplier cautioned

#### ADULTERATED OR IRREGULAR SAMPLE

140 samples were examined for preservative. One sample of beef sausage and one sample of pork sausage contravened the regulations in that they contained undeclared sulphite preservatives. The manufacturers were warned in both cases.

The average composition of the 120 samples of milk was 3.66% fat and 8.67% non-fatty solids compared with the presumptive standard of 3.00% and 8.50% non-fatty solids.

## (c) Milk Supply (Tables XVII, XIX, XX)

All milk sold in the Borough is bottled outside the Borough by firms who possess modern equipment. Many employ professional staff who regularly sample supplies of milk coming into their dairies from farms, and so are able to maintain the required standards.

Samples of milk are regularly taken from the local hospitals and schools and reports are submitted to the appropriate administrative authorities.

All the milk samples submitted to the Public Health Laboratory complied with the prescribed standards of their respective grades (Table XX) and 13 samples submitted for biological examination for tuberculosis were satisfactory.

The Milk (Special Designation) Regulations 1960 came into force on 1st October, 1960, and were operative from 1st January, 1961. These regulations superceded the Milk (Special Designation) (Pasteurised and Sterilised Milk) Regulations 1949-1953 and the Milk (Special Designation) (Raw Milk) Regulations 1949-1954.

The main effects of these new regulations is the introduction of dealer's (pre-packed milk) licences, which are renewable quinqennially from 1st January, 1961, and the fact that dealers need only be registered by the authority in which their premises are situate. This means that supplementary licences are no longer issued.

#### (d) Ice Cream (Table XX)

During the year 9 samples of ice cream and 3 samples of dairy ice cream were submitted for analysis. One sample of ice-cream was found to contain undeclared non-milk fat. The manufacturer was cautioned. The remaining samples were found to contain fat and milk solids other than fat in quantities well in excess of those required by the Food Standards (Ice Cream) Regulations, 1959. Twelve samples were submitted to the Public Health Laboratory and were considered bacteriologically satisfactory.

No contravention of the Ice Cream (Heat Treatment) Regulation 1959 has been observed. With one exception all the ice cream sold is manufactured outside the Borough.

#### (e) Meat and Foods Inspection (Tables XXI and XXII)

There are now no slaughterhouses in the Borough. The local butchers buy their meat "off the hook" mostly from the Manchester Wholesale Market.

The Manchester City Abattoir at Philips Park, at present under construction, will meet all reasonable requirements in the area.

#### (f) Hawkers of Foodstuffs

Twenty-three hawkers are registered under the Lancashire County Council (General Powers) Act, 1951. These are classified as follows :—

Bread and C	onfecti	onery	1
Eggs and Po	oultry		1
Fish and Gr	eengroc	ery	1
Greengrocery	y		6
Grocery and	Greeng	grocery	1
Ice Cream			11
Meat			1
Shell-Fish			1

All vehicles have been inspected frequently during the year, and defects, where observed, have been remedied.

#### 5. PUBLIC SANITARY CONVENIENCES

The cleansing and maintenance of the Public Conveniences listed below is vested in the Public Health Committee.

		Accommodation					
Situation		Females	M	Iales			
	1	W.C.'s	W.C.'s	Urinal stalls			
Bus Station, Lane End		6	3	6			
Trafford Road		3	2	3			
Peel Green		3	2	6			
Winton Library		3	2	3			
Barton Bridge, Barton Lane		3	2	6			
Monton Green		3	2	3			
Wellington Road		3	2	6			
Nelson Street		3	2	6			

Park Hotel, Monton.

Two new conveniences on sites in Nelson Street and at the Car Park, Wellington Road, were opened to the public in February, 1961. These replaced the urinals at Patricroft Bridge and the Car Park, Wellington Road. The urinal at Patricroft Bridge was sealed and the other urinal demolished, on the opening of the new conveniences. The urinal at the Park Hotel, Monton, is in an unsatisfactory condition and the owners have decided to abolish the urinal in the near future.

Much wilful damage has again been caused and the cost of repairs and making good the damage amounted to  $\pm 175$ . 0s. 5d. This showed an increase on previous years.

It is regrettable to record that a great deal of malicious damage occurred at the two new conveniences immediately they were opened to the public. Notices, offering a reward for information leading to the conviction of persons causing damage, have now been posted in all the conveniences.

#### 6. MORTUARY ACCOMMODATION

The cleansing and maintenance of the Mortuary is vested in the Public Health Committee. The mortuary, which was extended and modernised in 1956 at an approximate cost of  $\pounds 4,400$ , provides cold storage for 6 bodies, a post-mortem room, a viewing room, a reception room and a room for the Surgeon.

The mortuary has been used for the reception of 56 bodies during the year.

#### 7. CANAL BOATS

The only boats delivering coal to wharfs in the Borough are "Day Boats", which are not used as living accommodation. The other traffic on the Bridgewater Canal merely passes through the district.

#### 8. DISEASES OF ANIMALS ACT, 1950

#### (a) Swine Fever

An outbreak of swine fever occurred at a local piggery in May, 1960. 20 pigs died, 3 sickly pigs were killed and 95 pigs were sent for slaughter. Two other piggeries in the Borough were placed under movement restrictions because of contact with the infected place. The restrictions imposed on the piggery were withdrawn by the Ministry of Agriculture, Fisheries and Food on the 31st August, 1960.

The Swine Fever (Infected Areas) Special Order No. 3, 1960 came into operation on the 7th July, 1960, defining an area in Lancashire including Eccles. The order was revoked on the 8th September, 1960. During the restricted period 37 licences were issued authorising the movement of swine.

#### (b) Foot and Mouth Disease

The Foot and Mouth Disease (Controlled Areas) Special Order No. 9 came into force on the 26th November, 1960, and included Eccles in the area. The order was revoked on the 11th December, 1960. No cases of this disease occurred within the Borough and 7 licences were issued during the restricted period.

#### (c) Disease of Animals (Waste Foods) Order, 1957

This order prohibits the feeding of unboiled waste foods to animals and poultry, and provides for the inspection and licensing of all plant and equipment for the boiling of waste foods for animal feeding. Unboiled waste food, if not properly treated, may spread animal diseases, especially Foot and Mouth Disease.

Four such plants are licensed by the Local Authority.

#### 9. PREVENTION OF DAMAGE BY PESTS ACT, 1949 (Table XXVI)

During the year 220 treatments were carried out at 218 premises.  $\pounds 102$ . 1s. 10d. was recovered from the occupiers of industrial and commercial properties where treatments were undertaken.

The treatment of private dwellinghouses is undertaken free of charge.

The systematic treatment of the sewer system in the Borough is the responsibility of the Borough Engineer and Surveyor's Department.

#### **10. OFFENSIVE TRADES**

 There are two offensive trades established within the Borough :- Image: Constraint of the second secon

#### 11. HEALTH EDUCATION

A Clean Air Exhibition was held in the Town Hall from 25th to 29th October, 1960. During the five days the exhibition was open more than 1,200 adults and many children visited the exhibition. These visitors showed great interest in the appliances and equipment displayed by the various exhibitors. The exhibition provided an opportunity to bring to the attention of the public the proposals of the Eccles Council to make Eccles "smokeless" in the next ten years.

Lectures have been given on varying topics by Public Health Inspectors to several organisations in the town, and topical posters have been distributed to many firms.

#### 12. SHOPS ACT, 1950 (Table XXV)

There were 880 occupied shops in the borough at the year end; 516 visits were made, many to ensure compliance with closing hours, half-day closing and Sunday trading, as required by the Act.

There were no prosecutions for contravention of the Act during the year under report.

#### 13. PET ANIMALS ACT, 1951

The Act provides for the licensing of pet shops, and, in deciding whether to grant a licence the local authority is required to have regard to the need for securing that there will be provided accommodation suitable as regards size, temperature, lighting, ventilation and cleanliness; that there will be an adequate supply of suitable food and drink; that the animals will not be sold at too early an age; that all reasonable precautions will be taken to prevent the spread of infectious disease; and that appropriate steps will be taken in case of fire or other emergency.

Licences were granted in respect of four pet shops.

#### 14. REFUSE COLLECTION AND DISPOSAL (Tables XXVIII to XXX)

#### (a) Refuse Collection

For the fourth successive year it is pleasing to report that all bins from domestic and trade premises were emptied weekly except for Christmas week. The bonus scheme is still being operated and undoubtedly this scheme has contributed much to this happy state.

Absenteeism due to all causes was 350 man days, a decrease of 271 man days on 1959. Of this total, 74 man days were lost as a result of injuries, and the average absence due to sickness was 6 days per man per annum.

The employees engaged on refuse collection on 31st December, 1960 were as follows :---

1—Foreman.
 8—Drivers.
 1—Driver loader.
 8—Leading hand loaders.
 20—Loaders.

The weight of refuse collected during the year was 17,879 tons as compared with 17,998 tons in 1959. There will be a tendency to a reduction in the weight of refuse collected, as more areas become "smoke controlled", but the bulk of refuse will not decrease.

Surplus household goods continue to be collected at source upon request. This service has been much appreciated, and has contributed a great deal to the efforts being made to keep the town tidy. Accumulations of bulky furniture and other household refuse were removed from 2,073 premises; 418 deposits of garden refuse and builders refuse were removed.

Since its inception in April, 1949, over 12,800 bins have been provided under the Municipal Ashbin Scheme. During 1960, 786 bins were issued under the scheme. The Council again decided to continue the purchase of a bin which differs in several respects from the B.S.S. bin. It is anticipated that the former bin will give better and longer service. During the latter part of 1959 bulk containers were introduced at the Town Hall and on the Eccles open market. These containers, which are admirably suited to premises with large quantities of refuse, can be emptied dustlessly and with a minimum of handling by the special vehicle employed. It is hoped to introduce this type of bin into all premises where large amounts of refuse are produced.

#### (b) Refuse Disposal

Since the incinerator plant at the sewage works closed down in 1958, the disposal of all refuse in the Borough has taken place on the controlled tip, situated in the Worsley Urban District. There are 2 men employed on the tip, a tip foreman and an attendant. The tip and approach roads are founded on a deep layer of peat and constant attention has to be given to the filling in of depressions which occur due to uneven settlement taking place. Much trouble and inconvenience has been caused by trespassers on the tip. The compound and messroom have been broken into several times; replacement of locks and smaller items of equipment is almost a weekly task.

The baling of all salvageable materials takes place at the Devonshire Road Depot. An income of £2,655 for the removal and destruction of trade refuse showed an increase of £1,192 over 1959. An income of £3,730 was derived from the sale of salvageable materials. This showed an increase of £651 on 1959. Details are given in Table XXVIII.

In addition to the 17,879 tons of household refuse disposed of, 5,668 tons of builders' refuse, soil, sand, etc., were tipped making a total of 23,547 tons disposed of on the tip during 1960.

#### (c) Controlled bonfires

Two Civic sponsored "controlled bonfires" were again held in the Eccles and Patricroft recreation grounds on the 5th November, 1960.

Fuel for the controlled fires, and old furniture and other suitable combustible materials were collected in the months prior to bonfire day and stored at the Sewage Works. Local firms also contributed suitable materials. TABLE I
