ANNUAL REPORT

OF THE

SCHOOL MEDICAL OFFICER

FOR THE

CITY AND COUNTY OF THE CITY OF EXETER, 1926.

To the Chairman and Members of the Education Committee.

I have the honour to submit my Report upon the Medical Inspection of School Children for the year 1926.

MEDICAL INSPECTION.

The arrangements and methods adopted for the Medical Inspection of the children have been in all respects similar to those described in previous Reports. The children examined include the Entrants, Leavers, and Intermediate Group (aged 8), other Routine, Special Cases, and Re-inspection of Defective Children, the numbers examined being set forth on Table I.

Secondary and Junior Technical Schools.

The particulars of the School Medical Inspection of two Secondary Schools and Junior Technical School appears at the end of this Report.

Following Up.

For this purpose the City is divided into convenient areas, each School Nurse having charge of her own District, and during the year the School Nurses made 3,224 home visits in this connection.

Open Air Schools.

At present we have no Open Air Schools, although in suitable weather school playgrounds are largely used for the holding of classes. I consider that a day open air school would be one of the most useful aids we could have for the prevention of disease, and would improve the physical and mental health of many of the children.

See Table III., Page 15.—115 delicate children are attending the Public Elementary Schools, who would doubtless do much better in an Open Air School.

Special Enquiry.

The Assistant School Medical Officer and myself have continued this inquiry into the association of physical defects with backwardness in school children, and from Table V. it will be observed that of 786 children classified as backward, that is to say three standards below that of normal children, no less than 67.1 per cent. were found to be suffering from physical defects which, in our opinion, is sufficient to account for their backwardness.

Staff.

Particulars of the Staff are given Page 3.

CO-ORDINATION.

As the School Medical Officer, who is also Medical Officer of Health, is engaged in clinical as well as administrative duties, there is no difficulty in co-ordinating the work of the different Departments.

MEDICAL TREATMENT.

(a) Uncleanliness (see Table IV., Group IV.)

I have to report a steady improvement in the condition of children attending the Elementary Schools in the matter of cleanliness. This has been continuous since the institution of school medical work. At present the School Nurses make visits to the schools, particularly during the week following re-opening after holidays. During the year the School Nurses paid 394 visits to schools in this connection, the actual number of children examined being 17,165. Of this number 246 were unsatisfactory, 241 of these were cleansed satisfactorily by their parents after notice was given, and in 5 cases it was found necessary that the cleansing should be done by the Authority at the cleansing station.

No legal proceedings were taken against parents under the Education Act, 1921, Section 47.

(b) Tuberculosis.

Thirteen children have been referred by the School Medical Inspector to the Tuberculosis Dispensary for prolonged observation by the Tuberculosis Officer, and of these 6 were found to be tubercular and 2 were still under the observation at the end of the year, and 5 were non-tubercular.

RINGWORM.

134 cases have been treated at the School Clinic during the year, 57 being ringworm of the scalp and 77 ringworm affecting other parts of the body, and the number of visits paid to the Clinic for the treatment of this disease was 1,782. 111 were cured, and 23 still remained under treatment at the end of the year.

IMPETIGO.

198 cases of this disease were treated at the Clinic, making 1,396 attendances, and all were cured.

SCABIES.

4 families affected. 6 cases treated at Clinic, and 6 cases treated privately.

VISION.

Arrangements with the West of England Eye Infirmary still continue. See Table IV., Group II. Two cases have been operated upon, one Iridectomy and one for Squint, also 20 cases for special out-patient treatment for eye diseases at the Eye Infirmary.

TONSILS and ADENOIDS.

60 children received operative treatment under the arrangements made by the Local Education Authority.

See Table IV., Group III.

DENTAL TREATMENT.

The Report of the School Dentist on this work is attached. See Table IV., Group IV.

MINOR AILMENTS.

Treatment for these are given at the School Clinic, particulars appear on page 18—Table IV., Group I.

SWIMMING INSTRUCTION.

The arrangements whereby Elementary School Children are regularly taught swimming at the Corporation Baths continue, and during the year 555 scholars qualified for certificates as compared with 249 last year. The total number of scholars on the swimming register during the season was 1,176.

Medical inspection of those wishing to compete in the Annual Swimming Gala, 246 examined, and in 6 of these cases competition was not advised.

EMPLOYMENT OF CHILDREN AND YOUNG PERSONS.

Under the Bye-laws in force 147 medical certificates were issued and 60 children were re-examined for continuation of employment, and in no case was it found that the children's employment was detrimental to health or education.

SCHOLARSHIPS, BURSARS, AND STUDENT TEACHERS.

67 were examined and passed, subject in 8 cases to having defects remedied.

CO-OPERATION OF PARENTS AND OTHERS.

69 per cent. of the parents were present in the schools at the examination, and, generally speaking, these parents showed every desire to co-operate with the school staff for the benefit of their children.

I acknowledge with gratitude the assistance given me by the Secretary for Education, Head Teachers, School Attendance Officers, and various voluntary agencies, both for help in facilitating the work of inspection and in obtaining treatment for ailing children. In the matter of obtaining treatment, Inspector Hart, of the N.S.P.C.C., has been most helpful.

Statistics relating to the work of medical inspection, as required by the Board of Education, are attached to the Report.

I am, Ladies and Gentlemen,

Your obedient Servant,

P. H. STIRK,

School Medical Officer.
