REPORT	OF THE CHIEF SANITARY INSPECTOR	37

URBAN DISTRICT COUNCIL OF FAREHAM.

Public Health Department, 130 West Street, Fareham, Hants.

June, 1954.

To the Chairman and Councillors of the Urban District of Fareham.

Mr. Chairman, Ladies and Gentlemen,

I have the honour to submit the Annual Report of the Public Health Department for the year 1953.

The estimated population (44,740) furnished by the Registrar-General shows an increase of 1270 on the 1952 estimate. This increase is largely accounted for by immigration into the area, as the natural increase or excess of births over deaths was only 187.

There has been a slight increase in the live birth rate, 14.75 per 1000 population, when compared with 14.29 per 1000 in 1952, but the corrected birth rate of 15.19 per 1000 is lower than that of 15.50 per 1000 population for England and Wales.

The death rate for 1953 was 10.57 per 1000 population and shows an increase on the 1952 figure of 9.34 per 1000 population. I am not surprised at this increased figure as since the 1st January 1953, the deaths of inmates in two large Institutions in this district are no longer regarded as being outwardly transferable from this area. However, even the corrected figure of 10.68 per 1000 population is still lower than that of 11.40 per 1000 for England and Wales. There were 473 deaths from all causes and of that number 199 (42%) were persons 75 years or over.

The infant mortality rate of 18.18 per 1000 live births compares very favourably with that of 26.8 per 1000 live births for the rest of the country.

We had a very large number of notifications of cases of Infectious Diseases during the year. These notifications were received in the early part of the year and were mainly for measles. The number of cases of measles, 1036, was the largest recorded since that disease was made notifiable in 1941. Six cases of Anterior Poliomyelitis were notified and one of them proved fatal.

More than seventy per cent. of our child population are protected by immunisation against Diphtheria and it is gratifying to record the facts that the last confirmed case of Diphtheria notified here was in 1949 and the last fatal case in 1943.

Once again there has been a steady increase in the number of houses on the permanent housing scheme: 830 were completed on 31/12/52 and 256 were finished during 1953. On 31/12/53 318 houses were still under construction.

The Public Health Department was moved from Portland Chambers to 130 West Street, Fareham, in June and the new premises are very suitable. An Additional Sanitary Inspector was appointed to the Staff in September as we found that the very large throughput at the Abattoir demanded the services of an extra Meat Inspector.

It gives me great pleasure to record my appreciation of the assistance and co-operation I have received from you, the staff and my colleagues.

I have the honour to be,

Mr. Chairman, Ladies and Gentlemen,

Your obedient Servant,

M. CROWLEY,

Medical Officer of Health,

Section II.

PUBLIC HEALTH OFFICERS OF THE AUTHORITY.

Medical Officer of Health:

M. CROWLEY, M.B., B.CH., B.A.O., D.P.H.

Chief Sanitary Inspector:

* R. J. BAKER, M.S.I.A.

Additional Sanitary Inspectors:

- * C. ASH, F.S.I.A., M.R.SAN.I., M.R.INST.P.A., M.INST.M.
- * P. E. CHATTELLE, M.S.I.A.
- * D. E. V. COOPER, A.R.SAN.I. Commenced 28/9/53.
- * D. E. C. HAYWARD, M.R.SAN.I., M.S.I.A., A.S.A.A.(DIP).
- * A. MERCER, M.S.I.A., A.R.SAN.I. R. UPTON, M.R.SAN.I., M.S.I.A.
 - * Meat and Other Foods Certificate.

Pupil Sanitary Inspector:

J. M. W. RANDS.

Rodent Officer:

R. A. POWELL.

Senior Clerk:

MISS P. M. FIELDER.

Clerk:

MISS B. A. NEWMAN.

Section III.

STATISTICS & SOCIAL CONDITIONS OF THE AREA.

Area of District—18,352 acres.

Population—Registrar-General's Estimate of population for 1953—44,740.

Number of Inhabited Houses at end of 1953-12,763.

Rateable Value at 1st April, 1953-£289,710.

Sum represented by a Penny Rate—(1953-54) £1,160.

Natural and Social Conditions. The Urban District measures approximately eleven miles from east to west and five miles from north to south. It is bounded on the west by the Hamble River, on the south-west by Southampton Water and the Solent and to the south it adjoins the neighbouring Authority of Gosport. The waters of Portsmouth Harbour encroach upon a part of both the eastern and southern aspects, the eastern boundary adjoins extensions of the County Borough of Portsmouth and to the north-east and north, the Urban District is contiguous to the rising ground of Portsdown and the Rural District of Droxford.

The soil comprises chiefly gravel and clay, but to the east it is chalky in nature.

The principal industrial activities of the District include brick and tile works at Fareham and Sarisbury; brewery at Titchfield and mineral water factory at Fareham; laundries at Fareham and Locks Heath; artificial manure works at Portchester; tannery at Titchfield and foundary at Fareham. Boatbuilding has always been a feature of the industrial activities of the District, chiefly at Fareham, Sarisbury and Warsash. The western portion of the District is largely given to fruit growing and market gardening. A weekly cattle market is held at Fareham.

The population has increased from 30,450 in 1938 to 44,470 in 1953.

SUMMARY OF VITAL STATISTICS FOR THE YEAR

55—64	34	27	61
65—74	71	54	125
75 & Over	98	101	199
TOTALS	251	222	473

(7) REMARKS ON VITAL STATISTICS.

During 1953, there were 251 male and 222 female deaths, making a total of 473. The principal causes of deaths, in order of incidence, were diseases of the heart and circulation other than coronary disease and hypertension, 97, of which 27 were due to circulatory disease; vascular lesions of the nervous system, 82; cancer and other tumours, 63; and coronary disease, 63.

In Table (2), the vital statistics of births, deaths, etc., give a total of 660 live births; 328 males and 332 females. The registered still births numbered 15; 5 male and 10 female. Among the deaths from special causes cancer and other tumours numbered 63 and tuberculosis 6.

Table (3) gives the rates based on the figures supplied in Table (2) and shows a live birth rate of 14.75 per 1000 population and a death rate of 10.57.

In Table (4) the principal rates have been corrected for comparison with England and Wales and other areas.

The population and principal rates of the Urban District over the last ten years are set out in Table (5).

Section IV.

GENERAL PROVISION OF HEALTH SERVICES IN THE AREA.

(a) Laboratory Facilities.

Full facilities are available through the Public Health Laboratories for the bacteriological examination of water supplies and other investigations. Chemical examinations are now done by arrangement with neighbouring authorities.

(b) Ambulance Facilities.

All requests for ambulance transport in the area are dealt with by the County Ambulance Station at The Tannery, North Wallington (Tel. Fareham 2170). The County Council has an agreement with the City of Portsmouth whereby all calls for the removal of infectious cases are passed to the latter authority's ambulance service for attention.

(c) Clinics.

The following services in connection with tuberculosis, maternity and child welfare, orthopaedics, etc., are provided by the County Council and the Regional Hospital Board at clinics and treatment centres in the area:—

(1) Tuberculosis:

GOSPORT.

"The Gables,"

Spring Garden Lane.

Tel. Gosport 88007.

MONDAYS.

9.45 a.m. Patients previously

examined.

12 noon. New patients.

2.0 p.m. A.P. Refills.

TUESDAYS.

1.30 p.m. A.P. Refills.

One evening session on third Monday in month at 5.0 p.m.

(by appointment).

FAREHAM.

St. Christopher's Hospital, Wickham Road.

Tel. Fareham 2263.

MONDAYS.

9.45 a.m. Patients previously

examined.

2.0 p.m. New patients.

Wednesdays. 2.0 p.m. A.P. Refills.

(4) Ante-Natal:

FAREHAM—County Council Health Centre, West Street:—
First Monday, 2.0 p.m. (Dr. Hilton.)
Second Monday, 2.0 p.m. (Dr. Clarkson.)
Third Monday, 2.0 p.m. (Dr. Moran.)
Fourth and Fifth Mondays, 2.0 p.m. (Dr. Filose.)

PORTCHESTER—The Cormorant, Castle Street:—
First, Second, Third and Fourth Wednesdays, 2.0 p.m.
(Dr. Pike.)

Institutional Provisions for Mothers and Children

(provided by the Regional Hospital Board):

Blake Maternity Home, Gosport.

Blackbrook House, Fareham.

St. Mary's Hospital, Portsmouth.

(5) School Medical Inspections are arranged by the County Medical Officer by appointment. School Children can attend the County Council Health Centre, West Street, Fareham, first and third Fridays, 9.15 a.m.—10.15 a.m., for medical examination and advice only. (No treatment.)

(6) Minor Ailments.

School Clinic-Mondays to Fridays, 9.30 a.m.-10.30 a.m., 2 Stoke Road, Gosport.

(7) Child Guidance.

Wednesdays (mornings and afternoons) by appointment. School Clinic, Spring Garden Lane, Gosport.

Wednesdays (mornings) by appointment. Holbrook Health Centre, Bridgemary.

(8) Dental Clinic.

Held at County Council Health Centre, West Street, Fareham, daily, except Saturdays, and at Portchester and Sarisbury as required. Attendance by appointment from the County Dental Officer.

(9) Eye Clinic.

Held at St. Christopher's Hospital, Wickham Road, Fareham. Attendance by appointment from the County Medical Officer.

(10) Orthopaedic Minor Clinic.

Third Wednesday, 10.0 a.m. County Council Health Centre, West Street, Fareham.

Orthopaedic Surgeon's Clinic. Third Tuesday, even months, 10 a.m.

St. Christopher's Hospital, Fareham.

Orthopaedic Remedial Clinic.

Mondays and Thursdays (all day), St. Christopher's Hospital, Fareham. Responsibility of Regional Hospital Board and administered by Lord Mayor Treloar Orthopaedic Hospital Management Committee.

(11) Cleansing Clinics.

Fridays, 9.30 a.m. County Council Health Centre, West Street, Fareham.

(12) Speech Therapy.

Tuesdays and Thursdays, 9.30 a.m. and 2.0 p.m. County Council Health Centre, West Street, Fareham.

Mondays, 9.30 a.m. and 2.0 p.m. "The Gables," Spring Garden Lane, Gosport.

(13) Vaccination.

Vaccination against Smallpox is carried out by General Medical Practitioners free of charge under the National Health Service Act, 1946.

Note.—Parents are advised to have their children vaccinated, preferably at about the fourth month.

(d) Hospitals.

There are no general hospitals in the Urban District, but hospital services are available at Portsmouth, Southampton and Winchester; the nearest is at Cosham, five miles away. Infectious disease cases are sent to Portsmouth Hospital for Infectious Diseases. Most of the Maternity cases requiring hospital confinements are sent to Blackbrook Maternity Home, Fareham, but quite a number from the district are admitted to St. Mary's Hospital, Portsmouth.

Special hospital facilities are provided for smallpox and treatment for tuberculosis is available at Chandler's Ford, Bishopstoke and Winchester.

In July, 1953, the Mass Radiography Unit attached to St. Mary's Hospital, Portsmouth, visited Fareham and carried out a Survey. Three main groups were examined, viz.: the General Public, School Leavers and Organised Industrial Groups. In all,

2305 persons were examined and three were found to be suffering from active Pulmonary Tuberculosis, while 172 showed inactive lung lesions. Many of the persons X-rayed came from outside the Urban District, so that the above figures cannot be used as statistical data for Fareham.

(e) Diphtheria Immunisation.

The Notifications of Births furnished by the County Medical Officer form the basis of invitations to parents which are sent when the babies reach the age of eight months. The invitations are in the form of a pre-paid card and propaganda slip issued by the Ministry of Health. Parents are invited to take their children to their nearest clinic, or if they prefer, to their family doctor. In both cases the service is carried out free of charge.

Immunisation was carried out during 1953 at the Child Welfare Clinics at Sarisbury, Stubbington and Titchfield and the Special Clinic was held bi-monthly at Fareham. During the year immunisation clinics giving re-inoculations were held at fifteen schools, both private and Local Authority, in the district and the response at these was exceptionally good.

The following Table shows the number of children in the area who had completed a course of immunisation at the end of 1953:

Section V.

SANITARY CIRCUMSTANCES OF THE AREA.

1. Water Supply.

The Urban District is supplied from four sources and the number of houses and approximate population served are as follows:—

- (a) Fareham Water Works—supplying Fareham: 5,436 houses; 18,000 population.
- (b) Portsmouth Water Works—supplying Portchester: 3,017 houses; 9,051 population.
- (c) Gosport Water Works—supplying Crofton: 927 houses; 3,031 population.
- (d) Southampton Water Works—supplying Titchfield, Locks Heath, Sarisbury and Warsash: 2,668 houses; 10,672 population.

Regular sampling of the treated water supplied in the Urban District gave satisfactory results both from chemical and bacteriological analyses.

All premises in the Urban District with the following exceptions are on the main supply of one or other of the four supplies:—

- Fareham. There are 30 standpipes in Fareham supplying approximately 150 houses.
- Portchester. Three standpipes are provided in Portchester but no dwellings are supplied. All premises are supplied from main.
- **Crofton.** All premises are on the main supply with the exception of a few isolated cases.
- Locks Heath, Sarisbury, Titchfield and Warsash In these wards approximately 90 houses remain unconnected to the main supply and in these cases the supply is from shallow wells.

2. Drainage and Sewerage.

The sewage disposal plant at Salterns Lane, Fareham, is still overloaded. Warsash, Locks Heath, Sarisbury and part of Titchfield are without main drainage but the Council's Housing Estates in those areas have small sewage disposal plants.

3. Refuse Collection.

Weekly collection of refuse is maintained by the Council of the Urban District wholly by direct labour and six refuse collecting vehicles are used for this work.

Cesspit emptying is carried out by four vehicles specially equipped with pumping units and is done by direct labour. There is one gully-emptier for cleansing and flushing gully-traps.

The control of fly breeding at the two refuse dumps in the Urban District is carried out by regular spraying with insecticides.

4. Mosquito Control.

During the summer months complaints were received about the nuisance caused by mosquitoes in parts of the District and likely breeding grounds were sprayed.

No case of Malaria was notified during the year.

5. Smoke Abatement.

There are 174 factories in the Urban District of which 13 are smoke-producing. Some of the latter are situated in populous areas and frequent complaints were received from residents.

6. INSPECTIONS UNDER FACTORIES ACTS 1937 and 1948

Adaptation of Existing Houses and Hutted Camps:

_ 188 _ _ _

Private Enterprise:

— 447 404 239

The preceding table shows the position to date. The Council are making definite progress in re-housing the families living in overcrowded or sub-standard premises. The waiting list still includes many persons living in huts and caravans and the Public Health Department has supported many requests for re-housing from the occupants of the unsuitable ones.

SYNOPSIS OF INSPECTIONS.

1.	Inspections of Dwelling-houses during the year:	
	(1) (a) Total number of dwelling-houses inspected for housing defects (under Public Health or Housing Acts)	357
	(b) Number of inspections made for the purpose	916
	(2) (a) Number of dwelling-houses (included under sub-head (1) above) which were inspected and recorded under the Housing Consolidated Regulations 1925 and 1932	22
	(b) Number of inspections made for the purpose	34
	(3) Number of dwelling-houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation	10
	(4) Number of dwelling-houses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation	161
2.	Remedy of Defects during the year without service of formal Notices:	
	Number of defective dwelling-houses rendered fit in consequence of informal action by the Local Authority or their Officers	164

3. Action under Statutory Powers during the year:	
A.—Proceedings under Sections 9, 10 and 16 of the Housing Act, 1936:	
(1) Number of dwelling-houses in respect of which notices were served requiring repairs	7
(2) Number of dwelling-houses rendered fit after service of formal notices:	
(a) by owners (b) by L.A. in default of Owners	3
B.—Proceedings under Public Health Act:	
(1) Number of dwelling-houses in respect of which notices were served requiring defects to be remedied	1
(2) Number of dwelling-houses in which defects were remedied after service of formal notices:	
(a) by Owners (b) by L.A. in default of Owners	3
C.—Proceedings under Sections 11 and 13 of the Housing Act, 1936:	
(1) Number of dwelling-houses in respect of which Demolition Orders were made	-
(2) Number of dwelling-houses demolished in pursuance of Demolition Orders	2
(3) Number of dwelling-houses demolished after informal action	-
(4) Number of dwelling-houses demolished (Clearance Areas)	-
D.—Proceedings under Section 12 of the Housing Act, 1936:—	
(1) Number of separate tenements or under-ground rooms in respect of which Closing Orders were made	2
(2) Number of separate tenements or under-ground rooms in respect of which Closing Orders were determined, the tenement or room having been rendered fit	

Section VII.

INSPECTION AND SUPERVISION OF FOOD.

The actual number of inspections and other essential data have been fully recorded in the report of the Chief Sanitary Inspector.

Particular attention has been paid to educating both the food handlers in shops, canteens, cafes, etc. and the general public in the need for the hygienic handling of food. Members of the Staff of this Department have given ten lectures dealing with food hygiene to different voluntary organisations in the district. At one of these lectures the help of the Food Hygiene Division of the Ministry of Food was given gratuitously and three sound films supplied by them were also shown.

SYNOPSIS OF ANALYSIS UNDER FOOD AND DRUGS ACT, 1938.

A Report submitted by Mr. C. O. Perry, Chief Inspector, Weights and Measures Office, Basingstoke, for the year ended 31st March, 1954, gives details of samples purchased under the Act and submitted to the Public Analyst for chemical analysis, together with results obtained:—

ART	ICLE.		NUMBER TAKEN.		
			Genuine.	Unsatisfactory.	
Butter and	d other H	ats	 7	_	
Drugs			 7	_	
Milk			 134	_	
Meat Prod	ucts		 11	_	
Spirits			 11	-	
Other Food	ds		 15		
			185	_	

All the samples proved to be genuine and the 134 samples of Milk contained an average of 4.12% Milk Fat and 8.87% Non-Fatty Solids.

Section VIII.

NATIONAL ASSISTANCE ACTS, 1948 & 1951. Section 47.

Following a complaint by the Area Welfare Officer and acting on the recommendation of the Geriatric Specialist, emergency action was taken to deal with a patient under the above Acts. An old lady, suffering from grave chronic disease, living alone in insanitary conditions and unable to devote to herself and not receiving from other persons proper care and attention, refused admission to Hospital. The Order for removal sought from the Court was granted and the patient was transferred by Ambulance to a nearby General Hospital. The patient died in the Hospital four days later, so that application for an extension of the emergency Order was not necessary.

PREVALENCE AND CONTROL OF INFECTIOUS AND OTHER DISEASES. Section IX.

The distribution by age, season and locality of infectious diseases in 1953 is given in the following two Tables:

Table 1. Notifications of Infectious Diseases, 1953.

	Total	137 6 036 036 10 10 10 13 13 13 13 13 13 13 13 13 13 13 13 13	1382

The number of notifiable diseases recorded in the Urban District was 1,354, excluding 28 tuberculosis notifications. This figure includes 1,036 measles, 137 whooping cough, 55 dysentery, 20 pneumonia and 72 scarlet fever.

The changes in the incidence of the more prevalent infectious diseases are shown in the following Table for the period 1946—1953:—

	1946	1947	1948	1949	1950	1951	1952	1953
Measles	74	583	158	997	140	742	94	1036
Scarlet fever	67	28	25	52	74	47	10	72
Whooping cough	136	97	196	80	231	124	82	137

1. Scarlet Fever has shown an increased incidence but it still remains a mild disease. Seventy-two cases were notified during the year.

2. Diphtheria.

There were no confirmed cases of diphtheria during 1953 and as already stated, the last actual case of this disease notified in Fareham was in 1949. Absence of this very fatal disease does not call for any complacency on our part and immunisation still remains the first line method of defence. Primary immunisation should be completed during the first year of infant life and reinoculations are essential at regular intervals later. There has been an increase both in the numbers of primary immunisations and re-inoculations carried out during the year.

1,997 Children were immunised against diphtheria during 1953, as follows:—

	AGE (YEARS).					
	0-4	5—9	10—14	Total		
Primary Immunisation Re-inoculation	 556 59	56 970	9 347	621 1376		
	615	1026	356	1997		

3. Pneumonia.

Twenty cases of pneumonia were notified during 1953 as compared with 14 in 1952. The total deaths attributed to this cause were 18 but some of those occurred outside the Urban District.

4. Puerperal Pyrexia.

Five notifications of puerperal pyrexia were received in 1953.

5. Erysipelas.

Ten cases of erysipelas were notified during the year.

6. Measles.

There were 1,036 notifications of this disease in 1953 and 523 cases occurred in the 5—10 age group. Thanks to modern therapeutic measures—the use of sulphonamides and antibiotics—not one of this record number of cases proved fatal.

7. Whooping Cough.

Of the 137 notifications received, 126 were in respect of children under ten years of age. The highest incidence occurred in July with 37 cases.

8. Malaria.

No cases of malaria were notified during the year.

9. Poliomyelitis.

Six cases of Anterior poliomyelitis occurred during 1953 and unfortunately one proved fatal. Involvement of the brain is a very serious complication of this disease and was responsible for the death of the patient, aged 39 years. The other five cases all made good recoveries.

10. Dysentery.

Fifty-five cases of dysentery were notified during the year and of that number more than fifty occurred in a large institution where the faulty habits of the patients make it very difficult to prevent the disease. The Medical Authorities there use the best practical means to control spread of infection.

11. Food Poisoning.

Thirteen cases of food poisoning were notified and all were isolated ones. The usual bacteriological examinations were carried out on all the patients and the causative pathogens were isolated in four cases. No opportunity is missed by the staff in stressing the necessity for the hygienic handling of food and the importance of health education is being realised more and more every day.

12. Tuberculosis.

The total number of new cases of tuberculosis notified during 1953 was 28.

The distribution by ages of new cases and mortality and the number of patients on the Tuberculosis Register at the beginning and end of 1953 are shown in the following Tables.

Tuberculosis (New Cases and Mortality) 1953

Age Group		New	Cases		Deaths

TOTALS	4	31	32	2	27	16	6	2	-	120

One hundred and fifteen of the admitted cases were sent to the Infectious Diseases Hospital, Portsmouth, and the remaining five to the Infectious Diseases Hospital, Southampton.

Infectious Disease and Disinfection.

Investigations were made by the staff into cases of infectious disease and reports were made dealing with the possible sources of infection, the supervision of contacts and the disinfection of premises:—

Number of visits made during the year Number of premises disinfected ... 95

In addition, 149 Library Books which had been exposed to infection in 39 homes, were disinfected before being returned to the County Council Library.

URBAN DISTRICT COUNCIL OF FAREHAM.

ANNUAL REPORT

OF THE

CHIEF SANITARY INSPECTOR

FOR THE YEAR

1953.

URBAN DISTRICT COUNCIL OF FAREHAM.

January, 1954.

To the Chairman and Councillors of the Urban District Council of Fareham.

Mr. Chairman, Ladies and Gentlemen,

I beg to submit the Annual Report of the work of your Sanitary Inspectors for the year ended 31st December, 1953.

Food hygiene has again received special attention. The traders have readily co-operated with your officers with the result that greatly improved methods of handling, storing and preparing of food are in operation (page 42).

Adequate staff for meat inspection has been maintained at the Abattoir, although at times this has strained the resources of the Department, as relief had to be provided over a period—a total of 119½ days—because of sickness and holidays. The greatly increased throughput necessitated the appointment of an Additional Sanitary Inspector towards the end of the year. I am pleased to report that the whole of the throughput was examined (page 46).

The many other duties of the Department have been satisfactorily performed.

Your Inspectors have worked loyally and well.

I am,

Mr. Chairman, Ladies and Gentlemen, Your obedient Servant,

R. J. BAKER,

Chief Sanitary Inspector.

NUMBER RECEIVED	70 17 76 10 25 5 10 3 4	257
NATURE OF COMPLAINT	Housing Water Supply Drainage Closets Refuse Ditches Animals Animals Insects Insects Wermin Wermin Miscellaneous	TOTALS

WATER SUPPLY.

Since the completion, in 1948, of the Council's water mains extension scheme to provide a wholesome supply of water in all roads in the district where houses had been erected, a steady reduction in the number of shallow wells has taken place.

Two small extensions were carried out during the year. Seventeen samples of well-water were obtained and where found polluted, a pipe supply was provided.

The few standpipes in the district have not yet been dealt with, pending decisions under the Housing Acts on the houses concerned.

MOVEABLE DWELLINGS.

There were 25 caravans licensed at the end of the year Eleven caravans were removed and 13 new licences were granted

The caravan sites continue to be satisfactorily maintained.

An additional site for eight caravans has been approved. Provision is now available for 209 caravans on the six licensed sites.

HOUSING.

Twenty-nine houses were inspected and recorded in the Housing Register.

Two houses have been demolished, three closed and 13 are awaiting consideration under Section 11 of the Housing Act, 1936.

One hundred and twenty-eight houses were inspected for structural defects.

Seventy were repaired after informal notice and five after Statutory notice.

The Department continues to co-operate with the Housing Manager and other Local Authorities. One hundred and eleven reports with recommendations were submitted.

FOOD AND DRUGS ACT, 1938.

Section 10-Examination of Unsound Food.

The following visits and condemnations were made :-

Visits:

Cereal

A CONTRACTOR OF THE CONTRACTOR			
Butchers' sho	ps		 19
Fishmongers			 7

Sweets			 63 lbs.
Canned and b	ottled f	oods	 473 tins and jars.

Condemned meat is returned to the W.M.S.A. Depot at Portsmouth.

3 packets.

Other foodstuffs are rendered unsaleable at the premises and deposited in the trade refuse bins under the supervision of the Inspector.

Section 13.

Details of inspections made, of notices served and complied with are shown in Table on page 45.

The value of concentrated effort by a specialist officer can be seen in the reduction of notices served during the year. A great step forward in improved storage, handling and distribution of foodstuffs has taken place. In many cases the improvements carried out are far beyond the standard which could be enforced. Most of the shops and licensed premises are now provided with a constant supply of hot water.

Section 14-Registration.

Ice-Cream.

Premises on the Register at the end of the year were as follows:—

For sale 123Manufacture and sale ... 3Total ... 126

261 visits were made. The premises were maintained in a satisfactory manner; only in a few instances was it necessary to call attention to the state of the interior decoration and in these cases the conditions were immediately remedied. The standard of distribution of ice-cream was satisfactory. Where possible, travelling vans from outside the District were inspected.

The result of routine sampling was as follows:-

ICE-CREAM	Number	Pro	visior	3	ade
ICE-CREAM	Samples	1	2	3	4
Manufactured in Fareham Urban District	18	11	1	1	5
Others	49	35	12	-	2
	67	46	13	1	7

Samples of Ice-Cream falling within Provisional Grades 1 and 2 are, by laboratory analysis, considered satisfactory. It is worthy of note that only 8 samples were below these grades. Each case was investigated and another sample taken. In only one instance was this found to be unsatisfactory, whereupon the processing was checked and samples of ingredients examined. In this way, the cause of the trouble was found; subsequent samples were satisfactory.

Three registrations were cancelled during the year and eleven additional premises registered.

Preserved Foods.

There were 16 premises on the Register at the end of the year.

The registrations were chiefly for sausage making.

59 Inspections were carried out and premises and apparatus were found to be satisfactorily maintained.

SECTION 15-BYELAWS.

The provision of these byelaws for securing the observance of sanitary and cleanly conditions and practices in connection with the handling, wrapping and delivery of food are proving very useful. To emphasise the necessity for personal hygiene, the byelaws require that a notice be affixed near every sanitary convenience requesting employees to wash their hands after use of convenience. A quantity of notices have been purchased and these are offered to the occupier by the inspector at cost price. This practice has proved satisfactory.

THE MILK (SPECIAL DESIGNATION) (PASTEURISED AND STERILISED) REGULATIONS, 1945.

Three licences authorising the use of the special designation "Pasteurised" were issued.

Samples are taken regularly to ensure that the milk has been efficiently heat-treated, with the following results:—

Pasteurised Milk ... 149 samples All T.T. Pasteurised Milk ... 22 samples satisfactory.

Eight licences were issued for sale of Pasteurised and Sterilised milk from premises within the district.

Seven licences were issued for sale of Pasteurised and Sterilised milk from premises outside the district.

Three samples were taken in the course of delivery.

In addition to routine sampling of milk, the efficiency of the bottle washing plant has been checked by submission of bottles direct from the plant for bacteriological analysis.

THE MILK (SPECIAL DESIGNATION) (RAW MILK) REGULATIONS, 1945.

Four licences were issued for sale of Tuberculin Tested milk from premises within the district.

Six licences were issued for sale of Tuberculin Tested milk from premises outside the district.

MEAT INSPECTION—Funtley Abattoir.

The Senior Meat Inspector reports as follows:-

The first complete year of operations by the Ministry of Food has not been without its difficulties. Staffing to provide 100% inspection has been a considerable problem. Sick leave has been high due to the rigorous physical conditions in which the inspectors carried out the work.

Laboratory Facilities.

Although no laboratory aids to diagnosis have yet been provided, satisfactory arrangements have been made with the Public Health Laboratory Service for reports on material sent for bacteriological and histological examination. This work is illustrated statistically in Tables 4 and 8.

Transport and Handling.

A satisfactory standard has, in general, been observed. Some vehicles have been improved on representation and others found unsuitable have been withdrawn.

The following tables illustrate the results of inspections carried out:—

Meat Inspection, Ministry of Food Abattoir, Funtley, 28th December, 1952 to December 25th, 1953.

Table 7. Cysticercus Bovis.

- 154 Total Cases.
- 86 Imported direct from N. Ireland.
 - 7 Producer/consignor not identifiable due to loss of market label.
- 61 Subject of enquiries.

24 replies received; in no case was there conclusive evidence of origin of T. saginata.

- Possible sources indicated included :—
 - (i) Access of sewage to pastures due to defective private disposal plants.
- (ii) Access of persons of insanitary habits to pastures.
- (iii) Proximity to Service Establishments through which foreign service personnel pass.
- (iv) Previous history of P.O.W./" free "European forces/ foreign labour camps.

A number of cases occurred where no such explanation was forthcoming and where affected animals had been born and bred on the premises.

It is known that T. saginata ova survive sewage treatment, so that any watercourse to which effluent gains access could be a source of infection.

Distribution by counties follows fairly closely the proportions in which livestock are consigned from those areas for slaughter. Except for Hants (local dealer activities), distribution appears to be higher in more sparsely populated areas—possibly related to extent of conservancy systems. There was a tendency to aggregation in older groups, but a substantial proportion of viable cysts were seen at all ages from 15 months.

Table 8.

Bacteriology of Dressing Routine.

111 Samples are submitted to Public Health Laboratory Service.

INVESTIGATION: — 48 Dressing Line.

12 Meat Inspection.

Controls: 24 from Detention Room.

Treated Samples: 3 Rinse-water.

24 Swabs of knives used in detention room and treated with quarternary ammonium compound.

SHOPS ACT.

114 Inspections were made during the year. To overcome the difficulty experienced by shopkeepers in obtaining the appropriate notice or notices required to be exhibited, the Public Health Department purchased a supply of all types of notices. These have been made available to the shopkeepers at the time of inspection at the cost price to the Council. This practice has proved effective, has reduced clerical work, removed the need for re-visits and secured uniformity in the type of notice exhibited.

PREVENTION OF DAMAGE BY PESTS ACT, 1949.

The test baiting of the sewers on the 13th—20th July, 1953, resulted in a "no take", thus for the first time, no sewer treatment was required.

174 Manholes were test baited.

The following table gives the work done (other than sewers) by the Rodent Officer during the year.

	Local Authority's Properties	Dwelling Houses	Agricultural Properties	Business and Industrial Premises	Total
1. Number of Inspections and Re-Visits	122	932	1112	302	1468
2. Number of properties inspected during 1953 as a result of (a) Notification (b) Routine	21	140	1 60	28 66	169

PET ANIMALS ACT, 1951.

This Act to regulate the sale of pet animals came into operation on the 1st April, 1952.

Two licences were issued during the year.

The Inspector of the R.S.P.C.A. assists in ensuring that the provisions of the Act are observed.

RAG FLOCK AND OTHER FILLING MATERIALS ACT, 1951.

This Act to secure the use of clean filling in upholstered articles, etc., came into force in 1951.

One registration has been granted.

PETROLEUM ACT AND REGULATIONS.

Seventy-eight licences to store petrol were issued during the year.

Storage capacity—For Sale 65,800 gallons
Private Use ... 26,900 gallons
Total storage under licence 92,700 gallons
All known petrol stores were inspected.

OLD METAL DEALERS ORDER, 1952.

The Department keeps the Register required. Five premises have been entered in the Register.

The Superintendent of Police arranges for the necessary inspection to see that the provisions of the Act are enforced.

HEATING APPLIANCES (FIREGUARDS) ACT, 1952.

This Act to prohibit the sale or letting of certain heating appliances without an effective fireguard was passed on 1st August, 1953, and Regulations made under the Act came into operation on 1st October, 1953. Existing appliances manufactured in this country are exempt from the Regulations until 1st October, 1954.
