GOSPORT & ALVERSTOKE
URBAN DISTRICT COUNCIL.

REPORT

OF THE

Medical Officer of Health

J. W. GREGORY KEALY,
M.R.C.S., L.R.C.P., D.P.H.,

For the Year 1911.

GOSPORT:
KEMP BROTHERS & WOOTTON, LTD., PRINTERS, HIGH STREET,

ANNUAL REPORT

OF THE

Medical Officer of Health,

FOR THE

District of Gosport and Alverstoke,

FOR THE YEAR 1911.

*To the Chairman and Members of the Gosport and Alverstoke Urban
District Council.*

GENTLEMEN,

I have the honour to submit to you my Second Annual Report for the Year 1911, dealing with the Public Health of the District.

The Population, according to the Census Returns of April, 1911, was 33,301; the Population to the middle of the year having been estimated at 33,000.

For this year (and in all future years) the vital statistics are presented so as to include all Births and Deaths which properly belong to the District, some of these having occurred in other places. On the one hand the deaths of "Residents" who have died away from the District are included in the total for the year, and on the other hand the deaths of Non-Residents are transferred by the Registrar General to their respective localities, and do not find a permanent place in our own returns. This also applies to the Birth tables.

Births and Birth Rate.—835 Births were registered in the District, 14 have been transferred from outside districts as belonging to our own: total 849, males 440, Females 409, giving a Birth Rate of 25·49.

The Registrar General's provisional figure for England and Wales being 24·4, we are, therefore, only slightly above the average; our Birth Rate for 1910 was 28·27.

Deaths and Death Rate.—The total number of Deaths recorded in the District was 490; of these 46 were transferred to the districts of which they were inhabitants, and 41 Deaths were notified us of residents, who had died away from our District. The nett deaths, therefore, amounted to 485, giving an annual average of 14·56, the "provisional" annual rate per 1,000 living being 14·60.

Mortality at Several Ages—

	1907	1908	1909	1910	1911
Deaths at under 1 year ...	68	96	67	72	115
„ „ 5 years ...	30	24	32	25	54
„ at 5 and under 5 years	12	15	20	18	18
„ at 15 „ 25 „	38	32	32	23	32
„ at 25 „ 65 „	148	125	174	179	149
„ at 65 and upwards ...	123	89	129	120	117

Infant Mortality.—The great excess, as compared with that of the previous 4 years, was entirely due to 43 deaths from Infective Enteritis and Diarrhoea, caused by the continued and excessive heat in August and September. 16 Deaths were due to Premature Birth and 20 to Atrophy and Congenital Debility.

Infant Mortality Rate for the past Five Years—

1907 per thousand born	77·4
1908 „ „	108·1
1909 „ „	77·27
1910 „ „	78·34
1911 „ „	135·45

Advanced Age Mortality —There were 49 Deaths of those who had reached 70 years and over, 32 had reached 80 years and over, and 6 were nonagenarians, three having completed 94 and one 98 years.

Location of Deaths.

Births in the Year—Legitimate 849; Illegitimate 36.

Deaths in the Year—Legitimate 108; Illegitimate 7.

Zymotic and Infectious Diseases —The number of Deaths, 94, due to these diseases, which include Small Pox, Measles, Diphtheria, Whooping Cough, Scarlet Fever, Enteric, Erysipelas, Diarrhoea and Enteritis, was four times as many as last year. More than half of the total, namely 53, was caused by the wide-spread and severe epidemic of Infantile Diarrhoea in an exceptionally hot and dry summer. Measles and Whooping Cough were very prevalent in the early Spring, each of these diseases accounting for 14 Deaths amongst the young. Diphtheria caused 6, Scarlet Fever 3, and Enteric Fever 4 deaths.

It will be noted that out of the total of 53 deaths from Diarrhoea 43 were those of infants under 1 year, and 8 of under 2 years.

Systematic inquiries were made into 33 cases of the infantile Deaths, and the following facts were elicited:—

13 had been brought up by bottle feeding from the time of birth, 18 had been, for a short time, fed by the breast, but for some time, prior to the epidemic, had been weaned and were being hand-fed: 31 of these particular Deaths, therefore, occurred in bottle-fed babies, the remaining 2 being breast-fed— a striking disproportion.

The Deaths were evenly distributed over the different wards, the number in ratio to population being highest in the North; of the 33 cases investigated, 5 occurred in the Town, 12 in the South, and 16 in the North Ward.

Special and extra attention was given to the cleansing and scavenging of the streets during the period.

Scarlet Fever was much less rife than in 1910, 64 cases having been notified, as against 139 in the previous year. The general type was mild.

Diphtheria, as a group, formed the biggest sum in the total, 68 cases having been notified—20 more than last year.

Enteric Fever was not very prevalent, 14 cases having been notified, 6 of these were severe, and definite evidence was obtained, that in three of these, the disease had been contracted during visits away from the neighbourhood.

Schools.—A localised epidemic of Diphtheria during November and December amongst the children attending the Molesworth Infant Schools was investigated by myself and the School Medical Officer.

The first and "carrier" case was not brought to our notice till the disease had already attacked 3 of the other scholars.

The following cases were notified to the School Medical Officer during the year:—

Scarlet Fever	34
Diphtheria	44
Enteric Fever	5
Erysipelas	2

The following tables show the notifications received, the number of cases removed to Blake Hospital, and the distribution of deaths.

Cases of Infectious Disease notified during the Year 1911.

Isolation Hospital. Name and Situation :—Blake Isolation Hospital, Elson, Gosport.
Total available beds—34. No. of diseases that can be concurrently treated—4. Small Pox—12

Blake Isolation Hospital.—The admissions from January 1st to December 31st numbered 140, being 55 less than in 1910.

Out of the 14 Enteric cases notified 13 were received for treatment; one of the severe cases terminated fatally within a week of admission.

Diphtheria.—65 were admitted, two were practically hopeless when taken in, no medical assistance having been obtained during the first 7 days of the illness.

Five were very doubtful cases, four of them being adults, all giving by swab-testing, negative results. Scarlet Fever caused two deaths, one being septic and developing Pericarditis.

The "Milne" system has been thoroughly carried out during the year, every case on admission receiving the local and general treatment for the specified times. The cases have been too few, and the 12 months it has been adopted too short, to give any decided opinion on its practical advantages. During this year, however, no "return" cases have occurred, due partly, I believe, to this treatment, and also to an alteration in the time of giving the last "disinfecting bath," and to more detailed attention being given to the working of the "Disinfector."

During the year a small committee, consisting of the Surveyor, Councillor Goodwin, the Sanitary Inspector, and myself, was instructed to consider thoroughly the advisability of substituting a High Pressure Disinfector for the present one in use. As the cost would have been considerable, and the present one proved efficient in the strict bacterial tests employed, the Health Committee decided to leave the question alone.

I am much indebted for the time and trouble spent in getting the information and figures required, as they will form a good basis for any future action, should it be needed.

Poliomyelitis and Spinal Meningitis.—

During the Summer the County Medical Officer of Health asked for an enquiry into the antecedents of a case of Poliomyelitis in a child who had been ill whilst on a visit to the district, and had been notified on its return home as suffering from the first-named disease. At his suggestion I recommended the Council to obtain the sanction of the Local Government Board to make them compulsory notifiable diseases for twelve months—this was readily adopted.

Pulmonary Tuberculosis.—Under the Public Health (Tuberculosis) Regulations of 1908 and 1911, nine cases were notified; 3 voluntary notifications being received during the year. All the patients were receiving treatment either in Sanatoria, or as out-patients at the Royal Portsmouth and Gosport Hospital. The personal and family history of the latter, their surroundings, and circumstances, were duly enquired into.

The new regulations requiring the compulsory notification of all cases of Pulmonary Tuberculosis came into force as from January 1st, 1912.

The Board state "that nothing shall apply or authorise anyone to put in force with respect to a person in relation to whom a notification has been made, any enactment which renders him or any other person liable to a penalty, or subjects him to any restriction, prohibition, or disability affecting him or his employment, occupation, means of livelihood, or residence, on the ground of his suffering from pulmonary tuberculosis."

Each locality will, thereby, be in a position to know the actual number of cases in their midst, and be enabled to adopt measures which will assist in largely diminishing, if not in eradicating, this deadly disease.

Last year there were 36 deaths in the District, and 3 occurred away of "residents," belonging to the District.

Water Supply.—Through the courtesy of the Gosport Waterworks Company and their Engineer, Mr. E. T. Hildred, I am enabled to give the report of Drs. Thresh and Beale on a sample taken in the town on January 15th, and sent to them for full analysis: "The sample is in every respect a typical chalk water of the highest quality. It is not too hard, contains no excess of saline matter, is of a very high degree of organic purity, contains very few bacteria, and none of an objectional type. It is excellent for all the purposes of a public supply."

PHYSICAL EXAMINATION :—

TURBIDITY : Clear and bright. No deposit.

COLOUR : Faint Green. ODOUR : None. REACTION : Neutral.

CHEMICAL EXAMINATION :—

Smallest quantity of water giving the reaction of the <i>Bacillus Enteritidis Sporogones</i> ...	Absent in 110 c.c.

Milk.—The Council now require that the registered sellers of Milk should not at the same time sell paraffin, vegetables, or articles subject to rapid decomposition.

Food Inspection, Slaughter Houses, Bakehouses —It has not been necessary during the year to condemn any food exposed for public sale, as being unfit for human consumption.

The Slaughter Houses and Bakehouses have been regularly visited and found to be kept satisfactorily.

New Houses.—During the past year 64 have been built.

Refuse Disposal.—The duplicate set of Destructor Cells is now in use. The whole of the house refuse can now be burnt, and no more Dumping in the District will take place.

Sewerage.—The number of houses not yet connected with the new sewerage system is still about 140. These are now included in a scheme, which the Council have adopted, under the increased powers of the Public Health Amendment Act of 1907, and which, it is expected will be executed and finished during the current year.

The matter of householders' ash receptacles is very unsatisfactory throughout the district; the great majority of them consist of boxes and other unsanitary articles, without proper coverings, exposed on the public pavements, allowing dogs and cats to scatter their contents.

Housing Town Planning Act, 1909.—Under the provisions of this Act nearly all the houses of about £16 yearly rental and under, in the north side of the Town Ward, have been inspected by the Sanitary Inspector and myself.

The total numbered 273.

122 were damp from (1) defective roofs, nearly all having been tiled, or (2) from defective guttering and stack pipes, or (3) from a combination of the two causes. Notices had to be served on the owners of all these properties to have the defects remedied.

It was necessary to have four privies cleansed and filled in. 6 open channels, taking sink water, were cut off from the street; 6 pan-closets were removed and two cesspools done away with, and filled in. These houses have been provided with water closets and drainage made to the sewer.

6 closing orders were made by the Council, three of these being determined, after necessary repairs had been completed, to my satisfaction.

There was a total lack of sanitary receptacles for refuse removal.

Factories and Workshops' Act, 1901.—During the year inspections have been made of the Factories and Workshops, their condition, generally, being very satisfactory.

A large increase is shown in the number of out-workers, due to the fact that the Commanding Officer, Royal Marines, every 6 months, forwards lists of all out-workers receiving work from the Barracks. Should we be notified of any infectious disease occurring in the premises where any out-worker is living, information is sent to the Commanding Officer, and arrangements are made to have all materials disinfected before being returned to the stores.

Routine Work.—During the year, with the Sanitary Inspector, I have visited and inspected periodically the Cowsheds, Dairies, Milk-shops, Workshops, Bakehouses, and Common Lodging Houses.

The Courts and Alleys have been regularly Lime-washed.

Suggested Improvements.—

- (1) Refuse Removal.—The Council would be well advised to require of every householder the adoption of a proper covered and portable galvanised iron receptacle, with a lid. Such could be obtained by the Council in quantities at a cheap rate in bulk, and be retailed to house owners; this would secure the general use of a uniform pattern.
- (2) The provision of Public Sanitary Conveniences in two or three suitable spots; those for women being specially needed.

The usual tabulated statement of visits made by the Sanitary Inspector during the year, the notices served for the abatement of nuisances, together with nuisances abated, are appended.

I am,

Gentlemen,

Yours obediently,

J. W. GREGORY KEALY,
M.R.C.S., L.R.C.P., D.P.H.

*Medical Officer of Health,
Gosport and Alverstoke Urban District Council.*
