HINCKLEY URBAN DISTRICT COUNCIL

Annual Reports

of the

MEDICAL OFFICER OF HEALTH

and

CHIEF SANITARY INSPECTOR

for the year ended 31st December, 1954

*

W. D. CRUICKSHANK, M.B, CH.B and

E. MELSON, M.S.I.A

Health and Sanitary Committee
(as composed 31st December, 1954)

Mr. Councillor H. CRAMP (Chairman of the Council).
Councillor Mrs. D. ATKINS, J.P., C.C. (Chairman of the Committee).
Mr. Councillor F. HALL, J.P., (Vice-Chairman of the Committee).
Councillor Dr. M. O. CRUICKSHANK, M.A., M.R.C.S., L.R.C.P.
Mr. Councillor G. E. DEARING, J.P.
Mr. Councillor E. A. HOLT.
Mr. Councillor J. JACQUES.
Mr. Councillor R. A. LUMB, B.A.
Mr. Councillor T. O. McGRAH.
Mr. Councillor G. PRICE-JONES.
Mr. Councillor J. WADDINGTON.

Health and Family Committee
(as composed 31st December, 1954)

- Mr. Counsellor H. KRAMER (Chairman of the Council).
Counsellor Mrs. M. ATKINS, J.P., C.O. (Chairman of the Committee).
Mr. Counsellor F. HALL, J.P., (Vice-Chairman of the Committee).
Counsellor Mr. M. G. GUTHRIE, M.A., M.B.O.S., L.M.S.P.
Mr. Counsellor G. H. HARRIS, J.P.
Mr. Counsellor E. A. HUNT.
Mr. Counsellor J. JACQUES.
Mr. Counsellor H. A. LAMB, M.A.
Mr. Counsellor T. O. MORRIS.
Mr. Counsellor G. BRUCE-JONES.
Mr. Counsellor J. VANDERBILT.

PUBLIC HEALTH OFFICERS
of the
HINCKLEY URBAN DISTRICT COUNCIL

Medical Officer of Health:
W. D. CRUICKSHANK, M.B., Ch.B. (Aberdeen)

Chief Sanitary Inspector:
E. MELSON, M.S.I.A.(1.2.3.)

Deputy Chief Sanitary Inspector:
H. DEAMER, M.S.I.A.(1.2.5.)

Sanitary Inspectors:
L. F. WHITMORE, M.S.I.A. (1.2.)
F. D. T. GEORGE, A.R.S.I., M.S.I.A.(1.2.3.4.)
A.M.I.San.E.

General Assistant/Clerk:
G. A. HULME

Clerks:
MRS. E. E. CLARK
MISS N. E. JENNINGS

Rodent Operator:
T. FITZPATRICK

1. Joint Board Certificate for Sanitary Inspector.
2. Royal Sanitary Institute Meat and Other Foods Inspectors Certificate.
3. Royal Sanitary Institute Diploma for Sanitary Science as applied to Buildings and Public Works.
4. Associate Membership Examination of the Institution of Sanitary Engineers.
5. Part I. of the Sanitary Inspectors Association Diploma in Sanitary Science.

PUBLIC HEALTH OFFICERS

of the

NEWCASTLE UPON TYNE DISTRICT COUNCIL

Medical Officer of Health:
W. D. GIBSON, M.B., Ch.B. (Aberdeen)

Chief Sanitary Inspector:
E. NELSON, M.B.I.A. (1883)

Deputy Chief Sanitary Inspector:
H. LEWIS, M.B.I.A. (1883)

Sanitary Inspectors:
J. P. WHITFIELD, M.B.I.A. (1883)

G. A. WHITE

Clerks:
MISS E. E. CLARK
MISS M. E. JENNINGS

Robert Operator:
T. FLETCHER

1. Joint Board Certificate for Sanitary Inspector.

2. Royal Sanitary Institute Most and Other Foods Inspector Certificate.

3. Royal Sanitary Institute Diploma for Sanitary Balance as applied to
Buildings and Public Works.

4. Associate Membership Examination of the Institution of Sanitary Engineers.

5. Part I. of the Sanitary Inspectors Association Diploma in Sanitary Balance.

ANNUAL REPORT

For the Year 1954.

To the Chairman and Members of the Hinckley Urban District Council.

Ladies and Gentlemen,

I present for your information the Annual Report for 1954, and, no unfavourable comment having been made, I offer it in the same set-up as that of last year, at a cost of only about one third that of printing.

General Health of the Community

Continues at a high level. There is no evidence of any general malnutrition.

Infectious Diseases

I note with satisfaction the complete absence of any cases of Poliomyelitis, and for the first time for several years the almost complete absence of measles - a disease normally occurring in epidemic form in alternate years. There were a few more cases of dysentery, a disease which now seems to be becoming established in Britain.

Diphtheria Immunisation

In 1953 owing to the existence of Poliomyelitis immunisation was stopped for the summer months. This was reflected in a drop in the figures but I am glad to say that during 1954 the number of children immunised was well above the average of recent years.

I cannot stress too often the need for this harmless protection against a killing disease. One suspected case was notified during the year, but the diagnosis was not confirmed subsequently.

Tuberculosis

There is a small, but definite, drop in the number of new cases notified.

Vital Statistics

There has been a fall in the total number of births with a consequent fall in the birth rate. The death rate shows a slight rise but is well below the national average.

ANNUAL REPORT

For the Year 1954

To the Chairman and Members of the Haverley Urban District Council.

Ladies and Gentlemen,

I present for your information the Annual Report for 1954, and no unfavourable comment having been made, I offer it in the same set-up as that of last year, at a cost of only about one third of printing.

General Health of the Community

Continues at a high level. There is no evidence of any general malnutrition.

Infectious Diseases

I note with satisfaction the complete absence of any cases of Polio, and for the first time for several years the almost complete absence of measles - a disease normally occurring in epidemic form in alternate years. There were a few more cases of diphtheria, a disease which now seems to be becoming established in Britain.

Diphtheria Immunisation

In 1953 owing to the existence of Polio, diphtheria immunisation was stopped for the summer months. This was reflected in a drop in the figures but I am glad to say that during 1954 the number of children immunised was well above the average of recent years.

I cannot stress too often the need for this harmless protection against a killing disease. One suggested case was notified during the year, but the disease was not confirmed subsequently.

Tuberculosis

There is a small, but definite, drop in the number of new cases notified.

Vital Statistics

There has been a fall in the total number of births with a consequent fall in the birth rate. The death rate shows a slight rise but is well below the national average.

Town Mortuary

The need for this is still urgent, and there are signs that something may be done about it during the coming year.

Food Hygiene

The campaign for clean food is being carried on relentlessly. A survey of the conditions in Licensed Premises is being made and comment on it occurs elsewhere in this Report.

The care of old people

The problem of the aged people in need of care and attention increases yearly. The ideal is to keep old people up and about, and to prevent neglect of home and self by timely help.

It would surely be more of an economic proposition to have these folk looked after in their own homes than in costly hospital beds.

I regret to note a tendency for the generation below to regard the welfare of their senior relatives as being primarily a responsibility for the State and no longer an honourable duty devolving on themselves.

Mr. Chairman of the Council, Madam Chairman and Members of the Health Committee I thank you once again for your support throughout the year, and tender my thanks to Mr. Melson and his staff for their help.

I have the honour to be,

Ladies and Gentlemen,

Your obedient servant,

W. D. Cruickshank.

Medical Officer of Health.

Tom Harty

The need for this is still urgent, and there are signs that something may be done about it during the coming year.

Food Hygiene

The campaign for clean food is being carried on relentlessly. A survey of the conditions in licensed premises is being made and comment on it occurs elsewhere in this Report.

The care of old people

The problem of the aged people in need of care and attention increases yearly. The ideal is to keep old people up and about, and to prevent neglect of home and self by timely help.

It would surely be more of an economic proposition to have these folk looked after in their own homes than in costly hospital beds.

I regret to note a tendency for the generation below to regard the welfare of their senior relatives as being primarily a responsibility for the State and no longer an inevitable duty devolving on themselves.

Mr. Chairman of the Council, Major Chairman and Members of the Health Committee I thank you once again for your support throughout the year, and tender my thanks to Mr. Welch and his staff for their help.

I have the honour to be,

Yours faithfully,

Tom Harty

W. P. Nicholas

Medical Officer of Health.

STATISTICS AND SOCIAL CONDITIONS OF THE AREA

(For comparative purposes last year's figures have been inserted in brackets).

Area in Acres	...	11,882	
Registrar General's estimate of population	...	39,680	(39,310)
No. of inhabited houses at 31/12/54	...	12,430	(12,138)
Product of a penny rate at 31/3/54	...	£846:15:11.	(£831:18:5)
Rateable value at 31/3/54	...	£212,649.	(208,122)

Social Conditions

The main industries of the district are the manufacture of hosiery which includes underwear and outerwear, and boots and shoes. There is also a large dyers and cleaners, some engineering and many trades ancillary to the two main industries.

The industries are of a light textile nature and none of the occupations seem to have an injurious effect on health. Much of the female labour is drawn from the neighbouring districts which causes a daily mingling of population.

The social conditions of the people are good. I set out below extracts from the 1951 Census, from these, it is apparent that we are better situated than many authorities in the constitution of our population, our proportion of children under 15 is above the average and our proportion of people of 65 years or over is the lowest in the County. The percentage of persons living at more than two per room in 1931 was 2.50 whereas in 1951 it was 1.25.

39,094 our census population compares with 29,031 at the 1931 census, an increase of 10,063, or 34.7%.

The 39,094 was made up by 18,754 males and 20,340 females.

There were 12,259 persons under 21 years of age, 6036 males and 6,223 females.

The percentage of children under the age of 15 was 24, compared with 22.7% for the County as a whole. Persons aged 65, and over, was 8.7%, the lowest in the County where the average was 10.7%.

9.4% of the population was in the age group	0 - 4 years.
14.6% " " " " " " " "	5 - 14 "
43.1% " " " " " " " "	15 - 44 "
24.2% " " " " " " " "	45 - 64 "
8.7% " " " " " " " "	65 years and over.

The average numbers of persons per household was 3.26 as compared with 3.70 in 1931.

STATISTICS AND SOCIAL CONDITIONS OF THE AREA

(For comparative purposes last year's figures have been inserted in brackets).

11,882	...	live in houses
32,600	...	Registrar General's estimate of population
12,430	...	No. of inhabited houses at 31/12/54
42,412:12:11	...	Product of a heavy rate at 31/12/54
42,412:12:11	...	Rateable value at 31/12/54
39,740	...	
12,138	...	
40,341:13:2	...	
308,122	...	

Social Conditions

The main industries of the district are the manufacture of pottery which includes underwear and outerwear, and boots and shoes. There is also a large glass and diamond, some engineering and many trades auxiliary to the two main industries.

The industries are of a light textile nature and none of the occupations need to have an injurious effect on health. Much of the female labor is drawn from the neighboring districts which causes a daily changing of population.

The social conditions of the people are good. I set out below extracts from the 1951 Census, from these, it is apparent that we are better situated than many authorities in the constitution of our population, our proportion of children under 15 is above the average and our proportion of people of 65 years or over is the lowest in the County. The percentage of persons living at more than two per room in 1951 was 2.50 whereas in 1951 it was 1.25.

39,004 our census population compares with 38,001 at the 1951 census, an increase of 10,003, or 26.3%.

The 39,004 was made up by 18,754 males and 20,250 females.

There were 18,252 persons under 21 years of age, 6036 males and 6,222 females.

The percentage of children under the age of 15 was 24, compared with 22.75 for the County as a whole. Persons aged 65 and over, was 8.7%, the lowest in the County where the average was 10.7%.

9.1% of the population was in the age group	0 - 4 years.
14.8%	5 - 14 "
43.1%	15 - 64 "
24.2%	65 years and over.

The average number of persons per household was 2.25 as compared with 2.20 in 1951.

Social Class

		Hinckley U.D. Proportions per 1,000	Whole of Leics. per 1,000	England & Wales total.
I. Professional etc. Occupations	171	13	22	33
II. Intermediate Occupations	1642	121	146	150
III. Skilled Occupations	8337	611	568	527
IV. Partly Skilled Occupations	2481	182	167	162
V. Unskilled Occupations	988	73	97	128
	<u>TOTAL</u>	<u>13,619</u>	males (occupied and retired) aged 15 years and over.	

The high proportion of persons who are in skilled occupations gives some indication of the industrial nature of the town and also helps to explain why the social conditions of the people are good.

TOTAL

1,229 (1,227)

3. Prevalence and Control over Infectious Diseases

Diphtheria Immunisation

	Children	
	Under five years	5 - 14 years
Total number immunised during year	468 (291)	23 (8)
Total number immunised since beginning of scheme	5864 (5396)	5048 (5025)
Number of children receiving booster dose of immunisation	366 (308)	

The incidence of diphtheria continues to fall. Throughout England and Wales in the last ten years notifications have fallen from 18,500 in 1945 to 182 for 1954. During the same period deaths have fallen from 722 to 9.

Immunisation has proved successful in wiping out Diphtheria but the object of the campaign must be maintained, e.g. to secure immunisation of not less than 75% of babies before their first birthday.

3. Prevalence and Control over Infectious Diseases

Diphtheria Immunization

Children		
	Under five years	5 - 14 years
Total number immunized during year	468 (394)	23 (8)
Total number immunized since beginning of scheme	2064 (2396)	5048 (5025)
Number of children receiving booster dose of immunization	366 (308)	

The incidence of diphtheria continues to fall. Throughout England and Wales in the last ten years notifications have fallen from 18,200 in 1925 to 182 for 1934. During the same period deaths have fallen from 722 to 2.

Immunization has proved successful in wiping out diphtheria but the object of the campaign must be maintained, e.g. to secure immunization of not less than 75% of babies before their first birthday.

Notifiable Diseases (other than Tuberculosis)

The following table shows the diseases occurring during 1954 and the distribution of them:-

Disease	Hinckley Central Wards	Barwell	Burbage	Earl Shilton	TOTAL
Scarlet Fever	52 (57)	29 (30)	9 (13)	22 (22)	112 (122)
Erysipelas	1 (2)	4 (-)	- (-)	4 (2)	9 (4)
Pneumonia	3 (8)	1 (8)	7 (1)	2 (1)	13 (18)
Dysentery	12 (2)	2 (-)	4 (-)	6 (1)	24 (3)

National Assistance Act 1948, s.47

Nine cases of old people who were in need of care and attention were dealt with.

Six went into a hospital or home, four went voluntarily and Orders were applied for the other two.

Two persons improved their conditions and two persons showed a very slight improvement.

Fifty visits were made to old people who were alleged to be in need of care and attention.

Tuberculosis

No action has been taken under the Public Health (Prevention of Tuberculosis) Regulations, 1925 or under s.172 of the Public Health Act 1936.

36 new cases were added to the register during the year.

To the Chairman and Members of the Hinckley Urban District Council.

Mr. Chairman, Ladies and Gentlemen,

I have pleasure in presenting my twenty seventh Annual Report upon the administration of your Sanitary Inspectors' Department.

The removal of the unfit houses was continued. 89 houses being dealt with by Clearance Area procedure and 9 as "individual unfits". The Clearance or Compulsory Purchase Orders were ultimately all confirmed by the Minister of Housing and Local Government. I hope the Housing Committee will be able to continue rehousing the displaced persons and that in four or five years the unfit houses in the district will have been cleared. Since 1932, 772 houses have been dealt with and 2,306 persons displaced, most of them having been rehoused by the Council.

It is too early yet to express any opinion upon the results following the operation of the Housing Repairs and Rents Act, 1954, but it would appear that the purpose of the Act to facilitate the repair of defective houses and prevent their further deterioration is not yet taking place.

The licensed and club premises have been surveyed, following meetings with interested parties. As a result of these meetings we sought the co-operation of the owners, agents and occupiers, they agreed to co-operate and I hope that our policy of education and co-operation, as against that of enforcement; will be justified by the results obtained.

Once again, I wish to express my thanks to the members and officers of the Council for their interest, support and co-operation. I also wish to express my sincere thanks to the members of the department's staff and to Dr. W. D. Cruickshank, the Medical Officer of Health. The changed circumstances during the year have called for much from the staff and these have been met in a willing and unselfish manner.

I have the honour to be,

Mr. Chairman, Ladies and Gentlemen,

Your obedient servant,

Chief Sanitary Inspector.

To the Chairman and Members of the Housing Urban District Council.

Mr. Chairman, Ladies and Gentlemen,

I have pleasure in presenting my twenty seventh Annual Report upon the administration of your Sanitary Inspector's Department.

The removal of the unfit houses was continued. 69 houses being dealt with by Clearance Area procedure and 9 as "individual matters". The Clearance or Compulsory Purchase Orders were effectively all confirmed by the Minister of Housing and Local Government. I hope the Housing Committee will be able to continue repurchasing the displaced persons and that in four or five years the unfit houses in the district will have been cleared. Since 1932, 772 houses have been dealt with and 2,306 persons displaced, most of them having been rehoused by the Council.

It is too early yet to express any opinion upon the results following the operation of the Housing Repairs and Rents Act, 1934, but it would appear that the purpose of the Act to facilitate the repair of defective houses and prevent their further deterioration is not yet taking place.

The licensed and club premises have been surveyed, following meetings with interested parties. As a result of those meetings we sought the co-operation of the owners, agents and occupiers, they agreed to co-operate and I hope that our policy of education and co-operation, as against that of enforcement, will be justified by the results obtained.

Once again, I wish to express my thanks to the members and officers of the Council for their interest, support and co-operation. I also wish to express my sincere thanks to the members of the Department's staff and to Dr. W. D. Crickhank, the Medical Officer of Health. The changed circumstances during the year have called for much from the staff and these have been met in a willing and unselfish manner.

I have the honour to be,

Mr. Chairman, Ladies and Gentlemen,

Your obedient servant,

W. J. ...

Chief Sanitary Inspector.

SANITARY CIRCUMSTANCES OF THE AREA

1. WATER SUPPLY

Quality

The water supply for the district is obtained from two sources.

- (a) Deep well water from Snarestone which is augmented by a supply from a borehole at Chilcote. This supply is a very hard water of great purity.
- (b) Reservoir water from Thornton, part of the City of Leicester Waterworks which is supplied to the district via The Borough of Nuneaton. This is a moderately soft water.

Both supplies are chlorinated.

Quantity

The water supply was maintained throughout the year. Fortunately, the water placed into supply was more than last year, thus, the position was maintained that the average daily consumption was about equal to the quantity of water available. This is a precarious position and there appears to be no prospect of any satisfactory improvement until a supply is obtained from the River Dove Scheme.

The blessing of a pure and abundant water supply seems to be taken for granted in our temperate climate. The purity still exists in our case but the abundance is lacking, this I believe is a temporary phase and it behoves all consumers to exercise care to prevent waste or wilful misuse of our water supply.

Examination of Water Supplies

(a) Town Water

22 samples were taken, 18 for bacteriological examination and 4 for chemical examination.

3 of the samples failed the bacteriological examination.

These samples were taken from one part of the district where complaints had been received of discoloration of the water.

One of the unsatisfactory samples was due to the presence of a consumer's fitting on the house service which had not been properly maintained. When this was removed, a subsequent sample was satisfactory.

SANITARY CONDITIONS OF THE AREA

1. WATER SUPPLY

Quality

The water supply for the district is obtained from two sources.

(a) Deep well water from Gunstone which is augmented by a supply from a borehole at Chibbole. This supply is a very hard water of great purity.

(b) Reservoir water from Thornton, part of the City of Leicester Water-works which is supplied to the district via The Borough of Warrington. This is a moderately soft water.

Both supplies are chlorinated.

Quantity

The water supply was maintained throughout the year. Fortunately, the water placed into supply was more than last year, thus, the position was maintained that the average daily consumption was about equal to the quantity of water available. This is a precarious position and there appears to be no prospect of any satisfactory improvement until a supply is obtained from the River Dove Scheme.

The blessing of a pure and abundant water supply seems to be taken for granted in our temperate climate. The purity still exists in our case but the abundance is lacking, this I believe is a temporary phase and it behoves all concerned to exercise care to prevent waste or wasteful abuse of our water supply.

Examination of Water Supplies

Total Water

25 samples were taken, 18 for bacteriological examination and 7 for chemical examination.

3 of the samples failed the bacteriological examination.

These samples were taken from one part of the district where cyanide had been received at dissolution of the water.

One of the unsatisfactory samples was due to the presence of a consumer's fitting on the house service which had not been properly maintained. When this was removed, a subsequent sample was satisfactory.

Copies of the analyst's reports are set out for

- (a) a sample of water from the Snarestone deep well,
and
- (b) a sample from the Dadlington supply.

	Sample (a) from No.1 High St. Barwell, taken on 29th November 1954.	Sample (b) from No. 2 and Hollycroft, taken on 29th November 1954.

Sample (a) Sample (b)

Parts per Million

Sample (a) Sample (b)
 from
 No. 1 High St. No. 2
 Brixley, and Hollisworth,
 taken on 29th November 1934.

(b) a sample from the Bellingham supply

(a) a sample of water from the Brixley deep well

Copies of the analyst's reports are set out for

The pH. value of the samples varied from 7.2 to 8.5 and the chemical composition of the water would appear to prevent any likelihood of plumbo-solvent-action.

(b) Well Water

13 samples were taken for bacteriological examination, 6 being declared satisfactory.

4 of the samples were also submitted for a chemical examination, 2 of them being declared unsatisfactory.

Following these results, one well was closed and a "town" supply provided, three wells were emptied and cleansed and one Chlorination plant was installed in connection with a well water supply to a dwelling house and cafe. The premises concerned are well beyond the reach of the town's mains.

Particulars of water supply to dwelling houses in the district.

Almost the whole of the population have an internal supply of town water, there being 38,959 people in 12,157 houses, in this position. 692 people in 233 houses have a supply of town water from external standposts and 309 people in 107 houses obtain a well or spring supply.

6 houses, formerly occupied by 14 people who obtained a supply from external standposts, were demolished during the year.

2,022 yards of 4" water main was constructed to meet the needs of building development.

2. SEWERAGE

Stoke Golding part of Trinity Ward

Permission has now been obtained to proceed with the overhaul and extension of the sewerage system.

The completion of this scheme should lead to considerable improvement in the sanitary circumstances of Stoke Golding.

3. SEWAGE DISPOSAL

The works of extension at the main Sketchley Works were almost complete at the end of the year.

A contract has been accepted for the overhaul and improvement of the small disposal works in Bullfurlong Lane, Burbage.

The pH value of the samples varied from 7.2 to 8.3 and the chemical composition of the water would appear to present any likelihood of phosphate-solvent action.

(b) Well Water

15 samples were taken for bacteriological examination, 6 being declared satisfactory.

4 of the samples were also submitted for a chemical examination, 2 of them being declared unsatisfactory.

Following these results, one well was closed and a "town" supply provided, three wells were emptied and cleaned and one Chlorination plant was installed in connection with a well water supply to a dwelling house and cistern. The premises concerned are well beyond the reach of the town's mains.

Particulars of water supply to dwelling houses in the district.

Almost the whole of the population have an internal supply of town water, there being 35,322 people in 12,157 houses, in this position. 632 people in 217 houses have a supply of town water from external standposts and 309 people in 107 houses obtain a well or spring supply.

6 houses, formerly supplied by 14 people who obtained a supply from external standposts, were demolished during the year.

2,022 yards of 4" water main was constructed to meet the needs of building development.

2. SEWERAGE

Stoke Golding part of Tenthly Ward

Formulation has now been obtained to proceed with the overhead and extension of the sewerage system.

The completion of this scheme should lead to considerable improvement in the sanitary circumstances of Stoke Golding.

3. SEWAGE DISPOSAL

The works of extension at the main Shuteley Works were almost complete at the end of the year.

A contract has been accepted for the overhead and improvement of the small disposal works in Bull/rook lane, Burdage.

4. CESSPOOLS

Six new cesspools were built in connection with properties situate some distance from the nearest sewer, one existing cesspool was found and this, together with the cesspool at one other dwelling house was abolished and the drainage systems connected to the sewer.

The position at the end of the year was that:-

there were,

122 cesspools and 12 septic tanks which received the drainage from 178 properties.

5. SANITARY ACCOMMODATION

There are 12,817 water closets and 216 pail closets in the Urban District.

No pail closets were converted during the year.

Of the 216 pail closets, 100 are situate in the Stoke Golding part of Trinity Ward and when the sewerage works have been completed this number should be considerably reduced.

There are no privies, privy middens or fixed ashpits in the district.

6. PUBLIC CLEANSING

House refuse collection and disposal is dealt with by direct labour under the control of the Engineer and Surveyor. Seven low side loading Karrier Bantam vehicles are used for refuse collection.

House refuse is disposed of by controlled tipping on land adjoining Heath Lane, Earl Shilton, and the trade refuse by partial controlled tipping at the Stapleton Lane, Barwell disposal works where much of the combustible type of trade refuse is burnt.

No complaints were received throughout the year regarding either of the tips.

It was not possible to maintain a weekly collection of refuse throughout the year.

7. DUSTBINS

During the year 387 inspections were made at 118 premises regarding the provision of satisfactory dustbins. In 52 instances informal notice was given. No Statutory notice was served. 100 new bins were provided and 3 were satisfactorily repaired.

1. CESSPOOLS

Six new cesspools were built in connection with properties at 114, 116, 118, 120, 122 and 124, together with the cesspool at one other dwelling house was abolished and the drainage system connected to the sewer.

The position at the end of the year was that:

There were,
125 cesspools and 12 septic tanks which received the
drainage from 178 properties.

2. SANITARY ACCOMMODATION

There are 12,817 water closets and 216 pail closets in the Urban
District.

No pail closets were converted during the year.

Of the 216 pail closets, 100 are situated in the 216 holding part
of Trinity Ward and when the sewerage works have been completed
this number should be considerably reduced.

There are no privies, latrine houses or fixed latrines in the district.

3. PUBLIC CLEANING

House refuse collection and disposal is dealt with by direct labour
under the control of the Engineer and Surveyor. Seven low side
loading motor vehicles are used for refuse collection.

House refuse is disposed of by controlled tipping on land adjoining
Heath Lane, East Hill, and the trade refuse by partial controlled
tipping at the Heath Lane, Barwell disposal works where much of
the combustible type of trade refuse is burnt.

No complaints were received throughout the year regarding either of
the tips.

It was not possible to maintain a weekly collection of refuse throughout
the year.

4. LITTERING

During the year 387 prosecutions were made at 175 premises regarding
the provision of satisfactory facilities. In 52 instances informal
notice was given. No statutory notice was served. 100 new bins
were provided and 3 were satisfactorily repaired.

After three owners of dwellings in the district had objected to providing dustbins for their tenants, the Health Committee instructed the Clerk of the Council to prepare a Memorandum on the law relating to the provision of Dustbins.

After considering the Clerk's Memorandum, the Health Committee decided:-

- (a) that where a house was let at the same rent as that paid in 1939, the tenant should be called upon to provide the dustbin, and
- (b) that when Statutory Notice was served requiring the provision of a dustbin, explanatory information on the Local Government (Miscellaneous Provisions) Act 1953, be included.

Under the provisions of the 1953 Act, provided that the person upon whom the Notice has been served serves the appropriate Notice on the other party to the tenancy, then the Court may determine who is the proper person to provide the dustbin having regard to the terms and condition of the tenancy.

As stated last year, under the existing system of obtaining the provision of dustbins, varying periods of delay almost invariably take place before a new one is provided. A defective dustbin may be as potentially dangerous to people as a defective drain and this point should be borne in mind when considering alternative methods which now exist for the provision of dustbins.

8. SANITARY INSPECTION OF THE AREA

Complaints

- 363 recorded complaints were received.
- 137 concerned public health matters.
- 118 concerned infestations of rats, mice, beetles, etc.
- 108 concerned housing matters.

Premises

- 903 premises were inspected relating to
- 943 nuisances or defects which were discovered and dealt with.

After three years of dwelling in the district had objected to providing quarters for their tenants, the Health Committee instructed the Clerk of the Council to prepare a Memorandum on the law relating to the provision of dwellings.

After considering the Clerk's Memorandum, the Health Committee decided:-

- (a) that where a house was let at the same rent as that paid in 1939, the tenant should be called upon to provide the dwelling, and
- (b) that when Statutory Notice was served regarding the provision of a dwelling, explanatory information on the Local Government (Miscellaneous Provisions) Act 1933, be included.

Under the provisions of the 1933 Act, provided that the person upon whom the Notice has been served serves the appropriate Notice on the other party to the tenancy, then the Court may determine who is the proper person to provide the dwelling having regard to the terms and condition of the tenancy.

As stated last year, under the existing system of obtaining the provision of dwellings, varying periods of delay almost invariably take place before a new one is provided. A defective dwelling may be an potentially dangerous to people as a defective drain and this point should be borne in mind when considering alternative methods which now exist for the provision of dwellings.

8. SUMMARY DESCRIPTION OF THE AREA

Complaints

- 363 recorded complaints were received.
- 137 concerned public health matters.
- 118 concerned infestation of rats, mice, beetles, etc.
- 108 concerned housing matters.

Inspection

- 303 dwellings were inspected relating to
- 265 instances of defects which were discovered and
- least with.

Outstanding 31st December	-	1

10. SUMMARY ACTION

Three summonses were issued and two convictions obtained.

- (1) One summons was for a contravention of s.9 of the Food and Drugs Act 1938 for selling food unfit for human consumption. An adhesive type of finger dressing was found inside a link of sausage. The manufacturer was fined £10.
- (2) Following many observations, spread over a long period, on a factory chimney in Burbage and the receipt of many complaints, application was made to the Magistrates for a Nuisance Order following the occupiers non-compliance with an Abatement Notice.

The offending chimney stack received smoke from two boilers used by two separate companies. The Magistrates dismissed the summons against one company who had a modern automatic underfeed stoker fitted to their boiler and made an Order for the smoke nuisance to be abated in three months against the other company and inflicted a fine of £5.

10. SUMMARY ACTION

Three summonses were issued and two convictions obtained.

(1) One summons was for a contravention of s. 2 of the Food and Drugs Act 1938 for selling food unfit for human consumption. An adhesive type of paper dressing was found inside a link of sausage. The manufacturer was fined £10.

(2) Following many observations, spread over a long period, on a factory chimney in Basing and the receipt of many complaints, application was made to the Magistrate for a nuisance Order following the occurrence non-compliance with an Abatement Notice.

The offending chimney stack received smoke from two boilers used by two separate companies. The Magistrate dismissed the summons against one company who had a modern automatic unheated boiler fitted to their boiler and made an Order for the other nuisance to be abated in three months against the other company and inflicted a fine of £5.

11. SHOPS ACT

81 inspections were made in connection with 21 premises.

11 contraventions were found, 8 being abated at the end of the year.

6 contraventions were also abated which were outstanding from the previous year.

12. MOVEABLE DWELLINGS

There are no licensed sites in the Urban District.

127 inspections were made relating to 30 moveable dwellings or sites.

16 new applications were received during the year,

3 new licences were issued when conditions were satisfactory.

Of the remainder of the new applications:-

6 were withdrawn after our requirements had been explained and the sites were vacated.

2 were withdrawn after owners moved into their own housing accommodation.

2 were withdrawn after Planning approval had been refused.

2 were granted with conditions attached but no licence had been issued at the end of the year, and

1 was granted subject to Planning approval being received.

14 applications for renewal of licences were received and granted for one year.

25 contraventions were found during the year.

10 were abated by the completion of structural works,

14 were abated by the removal of the moveable dwelling or withdrawal of the application for the licence.

1 was unabated, an unwholesome well water supply for one moveable dwelling.

7 moveable dwellings were removed from sites during the year,

1 moveable dwelling was vacated and awaiting removal from the site at the end of the year.

Three families from moveable dwellings obtained their own rehousing accommodation and one family was rehoused by the Housing Department of the Council.

18 moveable dwellings were in use at the end of the year.

34 inspections were made in connection with 21 premises.
 11 contraventions were found, 8 being abated at the end of the year.
 6 contraventions were also abated which were outstanding from the previous year.

12. MOVABLE DWELLINGS

There are no licensed sites in the Urban District.
 127 inspections were made relating to 30 movable dwellings or sites.
 15 new applications were received during the year.
 3 new licences were issued when conditions were satisfactory.

Of the remainder of the new applications:-

6 were withdrawn after our requirements had been explained and the sites were vacated.
 2 were withdrawn after owners moved into their own housing accommodation.
 2 were withdrawn after planning approval had been refused.
 2 were granted with conditions attached but no licence had been issued at the end of the year, and
 1 was granted subject to planning approval being received.
 14 applications for renewal of licences were received and granted for one year.

25 contraventions were found during the year.
 10 were abated by the completion of structural works,
 14 were abated by the removal of the movable dwelling or withdrawal of the application for the licence.
 1 was unaltered, an unwholesome well water supply for one movable dwelling.

7 movable dwellings were removed from sites during the year.
 1 movable dwelling was vacated and awaiting removal from the site at the end of the year.

Three families from movable dwellings obtained their own permanent accommodation and one family was rehoused by the Housing Department of the Council.

15 movable dwellings were in use at the end of the year.

13. REGULATED BUILDINGS

(a) Offensive Trade

There is one offensive trade premises, a tripe dresser, which is used very little. The premises are maintained in a satisfactory condition.

(b) Common Lodging Houses

There are no common Lodging Houses in the district.

14. THE OLD METAL DEALERS ORDER

6 persons have registered their premises with the Council. One person vacated registered premises during the year.

15. THE PET ANIMALS ACT, 1951

5 premises were licensed as pet shops.
12 inspections being made at the premises.

The occupiers of two shops were called upon to remove an infestation of mice and tidy up the premises. Generally the premises are conducted in a reasonable manner.

16. RAG FLOCK AND OTHER FILLING MATERIALS ACT, 1951

We have 7 registered premises. One registered premises was vacated during the year.

No premises are licensed for the manufacture or storage of rag flock. 10 inspections were made during the year and no contraventions were found, neither were any samples of flock submitted to a prescribed analyst.

17. SMOKE ABATEMENT

66 observations were made on chimneys in connection with 18 premises and 200 inspections were made.

21 nuisances were discovered, these were abated by the following action:-

- 10 by more care in stoking.
- 1 by the installation of a grit arrestor and the fixing of a new chimney.
- 2 by increasing the height of the chimney stacks.
- 8 by the fixing of smoke abatement appliances to two boilers.

13. REMOVED BUILDINGS

(a) Offensive Trade

There is one offensive trade premises, a large grocery, which is used very little. The premises are maintained in a satisfactory condition.

(b) Common Lodging Houses

There are no common lodging houses in the district.

14. THE CITY HEALTH OFFICE

6 persons have registered their premises with the Council. One person visited registered premises during the year.

15. THE FIRE ALARMS ACT, 1951

5 premises were licensed as fire shops. 12 inspections were made at the premises.

The owners of two shops were called upon to remove an infestation of flies and tidy up the premises. Generally the premises are conducted in a reasonable manner.

16. HAS FLOCK AND OTHER FLYING MAMMALS ACT, 1951

We have 7 registered premises. One registered premises was visited during the year.

No premises are licensed for the manufacture or storage of fly. 10 inspections were made during the year and no contraventions were found, neither were any samples of flock submitted to a prescribed analyst.

17. SMOKE LIMITATION

66 observations were made on chimneys in connection with 18 premises and 200 inspections were made.

21 instances were discovered, these were abated by the following action:-

- 10 by new wire in smoking.
- 1 by the installation of a first window and the fixing of a new chimney.
- 2 by increasing the height of the chimney stacks.
- 8 by the fixing of cross draught appliances to two boilers.

As referred to in paragraph 10, under Summary Action, proceedings were taken against the joint users of one works chimney stack where smoke nuisances had been occurring for some time.

Before taking this action every effort had been made to get the nuisance abated informally. 65 half hour observations were taken on the chimney from the beginning of our investigations and the emission of smoke was in such quantity as to be deemed a nuisance on 27 occasions. Before proceedings began, a Fuel Research Station type smoke abatement door was fixed to one boiler and a similar door was fixed to the other boiler after the Nuisance Order had been obtained.

Action was taken under sections 94, 97 and 103, of the Public Health Act 1936.

It was necessary to proceed under s.97 as the boilers used by two separate firms discharged into the same chimney stack. The boiler plant used by one firm was modern and fitted with an automatic underfeed smoke abatement plant. During our observations when only this boiler was in operation, it appeared to be efficient.

The Magistrates dismissed the summons against this firm.

Very few of the industrial premises in the district emit any excessive smoke. About 95% of the factory boilers in use in the district have some form of smoke abatement plant fitted to them.

The few premises referred to above are under constant observation and action is in hand to obtain improvement. Unfortunately, these premises are situated in the centre of the town. In another instance, although smoke abatement plant and a grit arrestor have been fixed to the boiler, occasional complaints are received from the occupiers of dwellings which surround the factory premises.

The Report of the Committee on Air Pollution (The Beaver Report) was published towards the end of 1954 and there seems to be prospects of a Clean Air Act being made.

If the recommendations for new legislation which are set out in the Report become law a notable step forward will be made to combat the smoke nuisance from both industrial and domestic premises.

The Report states the estimated annual cost of air pollution to this Country is £250 millions, not including the value of the fuel that goes to the making of smoke.

As stated in my last year's report the atmosphere of the Urban District is remarkably clear and whilst there is no doubt we shall benefit from new legislation envisaged above, the difference will be slight as compared with that which should occur in the centres of heavy industry and large cities.

18. ERADICATION OF VERMIN

122 inspections were made regarding verminous premises.

3 houses were fumigated and sprayed for bed bugs.

The majority of our inspections were to investigate and deal with infestations varying from Bats to Furniture mites.

19. VERMINOUS PERSONS

8 inspections were made under this heading. Two persons were cleansed during the year, the Cleansing Centre being used on three occasions for this purpose.

The Cleansing Centre in Wood Street, Hinckley which was made in a condemned dwelling house as an emergency war time measure is very unsatisfactory. The Health Committee have approved alternative proposals and I hope I shall be able to state in my next report that a Cleansing Centre of a more satisfactory standard is available for use.

20. HOUSING

A. New Houses

Houses, permanent type, completed during the year:-

By local authority	...	119
By private enterprise	...	222

Houses in course of erection at the end of year:-

By local authority	...	106
By private enterprise	...	265

Total number of post-war houses completed:-

By local authority	...	1,316
By private enterprise	...	631

Number of applicants for Council houses at end of year:-

...	731
-----	-----

Number of applications received during year	...	304
---	-----	-----

Number of families rehoused since the termination of hostilities:-

(a) in new houses	...	1,321
(b) in vacancies which have arisen	...	334

18. PRODUCTION OF VIEWS

122 inspections were made regarding verminous premises.

3 houses were flagged and sprayed for bed bugs.

The majority of our inspections were to investigate and deal with infestations varying from rats to furniture stores.

19. VERMINOUS PREMISES

8 inspections were made under this heading. Two persons were observed during the year, the Cleaning Centre being used on three occasions for this purpose.

The Cleaning Centre in Wood Street, Hinchley which was made in a contained dwelling house as an emergency was the measure as very satisfactory. The Health Committee have approved alternative proposals and I hope I shall be able to state in my next report that a Cleaning Centre of a more satisfactory standard is available for use.

The unfit houses dealt with since 1932, are,

- (a) As Individual Unfit houses,
263 Orders made and 766 persons displaced.
- (b) In Clearance Orders or Compulsory Purchase Orders
509 houses and 1540 persons displaced.

TOTAL

772 houses dealt with and 2306 persons displaced.

25. F. HOUSING REPAIRS

During the year 195 unfit or defective houses were repaired as a result of informal action.

It is not possible at present to inspect houses systematically and call for their reconditioning or repair. Our hands are full dealing with the removal of the unfit and worn out houses and performing our other duties, furthermore, I very much doubt whether the labour is available to deal with the building of new houses and other buildings, the existing maintenance work and an additional amount of house repair work.

When the unfit houses have been removed, this aspect of housing will then be attended to.

26. G. HOUSING ACT, 1936, PART IV. - OVERCROWDING

(a) (1)	Number of dwellings overcrowded at end of year		6
(2)	Number of families dwelling therein		10
(3)	Number of persons dwelling therein		48
(b)	Number of new cases of overcrowding reported during year		1
(c) (1)	Number of cases of overcrowding relieved during year		7
(2)	Number of persons concerned in such cases		72

The 7 cases of overcrowding which were relieved were as a result of housing accommodation being provided by the Housing Management Sub-Committee.

Information regarding families who are legally overcrowded is sent to the Housing Superintendent for attaching to their application for housing accommodation.

27. F. HOUSING ACT, 1936, PART IV. - OVERCROWDING

We houses dealt with and 2,706 persons displaced.

TOTAL

(b) In Clearance Orders or Compulsory Purchase Orders
509 houses and 1,510 persons displaced.

(a) As Individual Unit houses,
125 Orders made and 766 persons displaced.

The unit houses dealt with since 1935, are,

27. H. HOUSING SUMMARY

(a) Total number of occupied houses in district, 12430

(b) Total number of Council houses occupied in district, 2798

28. I. HOUSING ACT 1949

The Council decided in November to operate the part of this Act dealing with Improvement Grants for the modernisation of suitable houses. From this period to the end of the year 48 enquiries were made relating to the obtaining of a grant.

29. J. RENT RESTRICTION ACTS

18 cases were dealt with and entered in my register.

5 regarding proposals from landlords to increase rent,

6 regarding proposed rent increases from tenants,

4 " excessive rents from tenants,

1 " rent of sub-tenant, and

2 " sub-tenancy conditions.

The Housing Repairs and Rents Act, 1954 which commenced to operate from 1st August 1954 caused a material increase in the verbal enquiries received regarding rent problems.

Copies of the prescribed Statutory forms as set out in the Rent Restriction Regulations 1954 and The Housing Repairs (Increase of Rent) Regulations, 1954, have been cyclostyled to enable copies to be given to the enquirers. These have helped considerably as there are 28 paragraphs of explanatory notes for use in connection with the forms, far too many to explain satisfactorily or to remember by the enquirers.

One application for a Certificate of Disrepair under s.26 of the 1954 Act was received and granted.

INSPECTION AND SUPERVISION
OF FOOD

30. MILK SUPPLY
DAIRIES

46 inspections were made at 11 registered dairies. 25 contraventions were found, 18 being abated at the end of the year plus two abated from action taken in 1953.

27. F. HOUSING SURVEY

- (a) Total number of occupied houses in district, 12,730
- (b) Total number of Council houses occupied in district, 2,738

28. I. HOUSING ACT 1954

The Council decided in November to operate the part of this Act dealing with Improvement Grants for the modernisation of suitable houses. From this period to the end of the year 48 enquiries were made relating to the obtaining of a grant.

29. I. RENT RESTRICTION ACTS

- 18 cases were dealt with and entered in my register.
- 2 regarding proposals from landlords to increase rent
- 6 regarding proposed rent increases from tenants
- 4 excessive rents from tenants
- 1 rent of sub-tenant, and
- 2 sub-tenancy conditions.

The Housing Repairs and Rent Act, 1954 which commenced to operate from 1st August 1954 caused a material increase in the number enquiries received regarding rent problems.

Copies of the prescribed Statutory forms are set out in the Rent Restriction Regulations 1954 and The Housing Repairs (Increase of Rent) Regulations, 1954, have been circulated to enable copies to be given to the landlords. These have helped considerably as there are 28 paragraphs of explanatory notes for use in connection with the forms, far too many to explain adequately or to remember by the landlords.

One application for a Certificate of Increase under s.25 of the 1954 Act was received and granted.

30. RENT RESTRICTION ACTS

30. RENT RESTRICTION ACTS

25 applications were made at 11 registered districts. 25 applications were found to be valid at the end of the year plus two dated from before taken in 1955.

The contraventions found were:-

- 10 relating to cleansing items,
- 6 " " structural deficiencies,
- 3 " " utensils,
- 2 " " inadequate supply of hot water,
- 3 " " unsatisfactory clothing, and
- 1 " " washing facilities.

Of the eleven dairies in the district,

- 4 deal in raw milk,
- 4 " " bottled milk,
- 2 were vacated during the year and are no longer used, and
- 1 dairy is temporarily out of use.

Distributors

- 49 inspections were made in connection with 16 of the persons on the register.
- 7 contraventions were found,
- 2 of these being abated plus
- 6 contraventions following action commenced in 1953.

The contraventions which were outstanding at the end of the year were 2 regarding the need for cleansing of the walls and ceilings, 2 regarding unsatisfactory fittings and 1 regarding the absence of suitable screening.

There are two dairies where milk is pasteurised. One has a "Holder" type plant and conditions are good. A new bottle washing machine was installed during the year.

The second dairy has changed from a "Holder" type plant to a "High Temperature Short Time" plant. This business has outgrown the premises and larger accommodation is required to ensure a better standard being maintained.

Milk (Special Designation) Regulations, 1949.

(a) Pasteurised and Sterilised Milk

14 Dealers licences and 1 Supplementary licence have been granted to use the designation "Pasteurised". This is an increase of 5 over last year. No licences to use the designation "Sterilised" were applied for. The wholesale dairy who formerly sold Sterilised milk was absorbed by a Coventry company who ceased to continue their business in this district.

10	relating to cleaning items,
6	" structural deficiencies,
3	" electrical,
2	" inadequate supply of hot water,
1	" unsatisfactory clothing, and
1	" washing facilities.

Of the eleven defects in the district,

- 1 deal in raw milk,
- 1 " bottled milk,
- 2 were wasted during the year and are no longer used, and
- 1 dairy is temporarily out of use.

Inspection

- 12 inspections were made in connection with 16 of the persons on the register.
- 7 conventions were found,
- 2 of these being shared plus
- 6 conventions following action commenced in 1935.

The conventions which were outstanding at the end of the year were 2 regarding the need for cleaning of the walls and ceilings, 2 regarding unsatisfactory fittings and 1 regarding the absence of suitable covering.

There are two dairies where milk is pasteurised. One has a "Hobart" type plant and conditions are good. A new bottle washing machine was installed during the year.

The second dairy has changed from a "Hobart" type plant to a "High Temperature Short Time" plant. This business has continued the purchase and larger accommodation is required to ensure a better standard being maintained.

Milk (Special Convention) Convention, 1935.

(a) Pasteurised and Sterilised Milk

14 Dairies licensed and 1 supplementary license have been granted to use the designation "Pasteurised". This is an increase of 5 over 1934 year. No license to use the designation "Sterilised" was applied for. The wholesale dairy who formerly sold Sterilised milk was absorbed by a Coventry company who ceased to continue their business in this district.

The increase in the sale of Pasteurised milk is connected with the requirements of the Regulations plus the likelihood of the district being included in a "specified" area where only heat treated milk or milk from Tuberculin Tested herds can be sold.

(b) Raw Milk

17 Dealers licences have been granted for the sale of Tuberculin Tested milk, an increase of 4 over last year.

Milk Samples

(a) Bacteriological

	Tuber- culin Tested (farm bott'd)	Tuber- culin Tested	Accred- ited	Non- Desig- nated	Past- eurised	Tuber- culin Tested Past.	TOTAL

Percentage Un- satisfactory	-	12.2%	16.6%	14.2%	-	14.2%	8.1%

Phosphatase Test

The whole of the Pasteurised samples passed this test which is an indication that the milk had been satisfactorily heat treated.

By an informal arrangement between the County Sanitary Officer and myself I set out the results of the bacteriological examination of samples from our two pasteurising plants and of the Phosphatase tests made on the milk samples.

The increase in the sale of Pasteurized milk is connected with the requirements of the Regulations plus the likelihood of the district being included in a "specified" area where only past treated milk or milk from Tuberculin Tested herds can be sold.

(b) Raw Milk

My Dealer's license have been granted for the sale of Tuberculin Tested milk, an increase of 4 over last year.

Positive Samples(a) Tuberculosis

One was obtained from a herd producing non-designated milk which was sold in its raw state direct to the consumers. After the herd had been examined by the Divisional Veterinary Officer one cow was removed and slaughtered and one was isolated.

A Stoppage notice was served on the farmer requiring the milk from his herd to be heat-treated on the 6th May. The isolated cow was certified as being non-infective and the herd as being free from infection on 16th June 1955 and the notice was withdrawn. A claim was received and met for £6/18/7d. the additional expenses incurred in submitting the milk for pasteurisation.

This farmer has now voluntarily ceased to sell raw milk and all milk from his herd is pasteurised.

TABLE III.

ACIDIFIED	2	10
T.T.	12	43
T.T. (RAW MILK)	2	12
PASTEURIZED	2	3
T.T. PASTEURIZED	1	1
TOTAL	23	80

Positive Results

(a) *Tuberculosis*

One was obtained from a hard packaging non-sterilized milk which was sold in its raw state direct to the consumer. After the hard had been examined by the National Veterinary Officer and cow was traced and slaughtered and one was isolated.

A Baggins notice was served on the farmer regarding the milk from his herd to be heat-treated or the 60/100. The isolated cow was certified as being non-infective and the herd as being free from infection on 15th June 1934. A claim was received and paid for £2/10/0. The additional expenses incurred in submitting the milk for pasteurization.

The farmer has now voluntarily agreed to sell raw milk and all milk from his herd is pasteurized.

The second positive sample was one taken from a herd of 42 cows, the milk being mainly sold in its raw state. The Divisional Veterinary Officer examined the herd, 3 cows were slaughtered under the Tuberculosis Order of 1938, one following clinical examination of the herd and two following the biological examination of group samples. The Veterinary Officer stated no "Stoppage Notice" should be served.

The milk from the herd is now pasteurised.

(b) Brucella abortus

Five dairy herds were infected, Stoppage notices were served upon the owners of two of them. One cow was removed for slaughter and the milk from the five herds is now pasteurised.

Two of the farmers requested individual cow samples should be taken to enable the infected cows to be found and suitably dealt with. 43 samples were taken for this purpose, 7 of them being positive on the Ring Test, 4 on the Whey Agglutination Test and one on the Direct Culture Test.

One case of Undulant Fever was drawn to our attention and this appeared to be connected with the farm referred to in last year's report where steps were taken to deal with the infection.

The likelihood of our district becoming part of a "Specified" area where only Heat treated or Tuberculin Tested milk can be sold will help considerably to prevent disease from infected herds. It will however, still be possible to sell Tuberculin Tested milk in its raw state.

ICE CREAM

31. Registered Premises

(1) Manufacture and Retail	- 5
(2) Manufacture only	- Nil
(3) Retail only	- 102

77 inspections were made at 73 premises. No ice-cream is manufactured for sale in the district. That on sale being almost wholly produced by the large national companies and sold in prepacked containers or wrappers.

No samples were taken during the year.

32. MEAT AND FOOD INSPECTION

(a) Until July 3rd there was one regional slaughterhouse, after July 4th, there were 7 private slaughterhouses.

Ante-mortem inspection is made on every possible occasion and one hundred per cent post-mortem inspection takes place.

The second positive sample was one taken from a herd of 12 cows, the milk being mainly sold in the raw state. The Divisional Veterinary Officer examined the herd, 3 cows were slaughtered under the Tuberculosis Order of 1928, one following clinical examination of the herd and two following the laboratory examination of group samples. The Veterinary Officer stated no "stoppage notices" should be served.

The milk from the herd is now pasteurized.

(b) Brucella abortus

Five dairy herds were infected, stoppage notices were served upon the owners of two of them. One cow was removed for slaughter and the milk from the five herds is now pasteurized.

Two of the farmers requested individual cow samples should be taken to enable the infected cows to be found and suitably dealt with. 45 samples were taken for this purpose, 7 of them being positive on the Ring Test, 4 on the Ring Agglutination Test and one on the Direct Culture Test.

One case of Undulant Fever was drawn to our attention and this appeared to be connected with the farm referred to in last year's report where steps were taken to deal with the infection.

The likelihood of our district becoming part of a "specialized" area where only fresh treated or tuberculin tested milk can be sold will help considerably to prevent disease from infected herds. It will however, still be possible to sell tuberculin tested milk in the raw state.

1928 SUMMARY

31. Notifiable Diseases

- (1) Tuberculosis and Brucella
- (2) Anthrax only
- (3) Botulism only

2
211
102

77 inspections were made of 75 premises. No foot-and-mouth was reported for sale in the district. That on sale being chiefly supplied by the large national companies and sold in prepacked containers or wrapped.

No deaths were taken during the year.

32. MEAT AND POULTRY INSPECTION

- (a) Until July 1928 there was one regional slaughterhouse, after July 1928 there were 7 private slaughterhouses.

Laboratory inspection is made on every possible occasion and one hundred per cent post-mortem inspection takes place.

(b) Carcases Inspected and Condemned

Milk	251	251 lbs. equivalent, 17 1/2	-	-	
Green	25	25 lbs. 14 oz.	70	-	
Chase	28	1 1/2	-	-	
Traded Fruit	144	2	-	-	
Coconut Ice	102	-	-	-	
Hot Powder	312	-	-	-	7 bottles

Total Amount of Other Foods Condemned

2516 tins, 68 Jars, 2 bottles, 4 pkts, and 7 Barrels containing 6756 lbs. $7\frac{1}{4}$ oz. weight of foodstuff and $251\frac{5}{8}$ pints equivalent of tinned milk, also 164 faggots.

Examination of Food

(a) Bacteriological

60 tins of tinned cream were surrendered following a sample of the same brand of cream in another town being found to contain B. typhosus. 45 of the 60 tins were examined at the Public Health Laboratory and declared to be sterile.

2 tins of Corned Beef from a batch which had been the cause of many complaints regarding their unsound and unsatisfactory condition were submitted to the Public Health Laboratory and reported upon as sterile.

Food Sampling

The Urban Council is not a Food and Drugs authority, the County Council through their Public Control Dept. administer these provisions of the Act. I am indebted to Mr. G. G. Powell, Chief Inspector of this Department for the following information of the number of samples taken for chemical analysis from traders in our district.

Milk

<u>Total Samples</u>		45.	
Analysis:-	<u>Retail</u>	16.	All Genuine.
	<u>Wholesale</u>	20.	7 Satisfactory 13 Below standard Solids Not Fat, in connection with
	<u>Appeal to Cow</u>		9 all found below standard in Solids Not Fat. (2 suspected Added Water not confirmed).

All unsatisfactory samples were from churns of one producer, and the Appeal to Cow Samples from the same producer confirmed low standard milk. This case was therefore referred to the Veterinary Inspector of the Ministry of Agriculture and Fisheries.

Total Amount of Other Foods Consumed

2516 lbs., 68 jars, 2 bottles, 4 pails, and 7 barrels containing
6756 lbs. 7 oz. weight of foodstuff and 2516 pails equivalent of
tinmed milk, also 165 eggs.

Examination of Food

(a) Bacteriological

60 tins of tinned cream were examined following a sample of the
same brand of cream in another town being found to contain *E. typhimurium*.
40 of the 60 tins were examined at the Public Health Laboratory and declared
to be sterile.

2 tins of Corned Beef from a batch which had been the cause of many
complaints regarding their amount and unsatisfactory condition were submitted
to the Public Health Laboratory and reported upon as sterile.

Food Sampling

The Urban Council is not a Food and Drugs authority, the County Council
through their Public Control Dept. administer these provisions of the Act.
I am indebted to Mr. G. B. Powell, Chief Inspector of this Department for the
following information of the number of samples taken for chemical analysis
from tins in our district.

Milk

<u>Total Samples</u>	45.
<u>Analysis:-</u>	46.
<u>Butter</u>	All Genuine.
<u>Wholesale</u>	20.
<u>Appeal to Cow</u>	7 Satisfactory 13 Below standard solids not fat, in connection with 9 all found below standard in solids not fat. (2 suspected Added Water not confirmed).

All unsatisfactory samples were from churns of one producer, and the
Appeal to Cow Samples from the same producer contained low standard milk.
This case was therefore referred to the Veterinary Inspector of the Ministry
of Agriculture and Fisheries.

Other Foodstuffs, including Ice Cream, Medicines, Oranges, Sausages, etc.

33. SLAUGHTERHOUSES

On the 1st March, the Vice Chairman of the Health Committee, the Clerk of the Council and the Chief Sanitary Inspector representing the Health Committee met the local butchers and meat traders Associations to discuss future slaughtering facilities. 27 butchers attended. They were asked to express their opinion upon the position and on the following questions:-

- (1) The Council to erect an abattoir,
- (2) All slaughtering to continue at the Central Slaughterhouse as at present,
- (3) Use the existing Central Slaughterhouse to its full capacity and augment the facilities available by the use of the nine licensed slaughterhouses.

Upon a show of hands being made,
16 voted in favour of question 1 and none against., there was no support for question 2 and 15 voted in favour of question 3 and none against.

A further meeting was held with the Associations and afterwards the Health Committee decided that notice under s.57(3) of the Food and Drugs Act 1938 be served upon the occupiers of slaughterhouses which were licensed in 1939, setting out a schedule of works to make the premises suitable for use and stating that if these were satisfactorily completed they would be given a licence for the maximum period possible, expiring in July 1959.

7 occupiers of slaughterhouses undertook to do the required works and these slaughterhouses were used from 4th July onwards.

The schedule of works required was modified in accordance with the Ministry's Memorandum which stressed this action was to meet slaughtering requirements during an interim period only. The provision of a separate cooling room was not therefore pursued.

At the end of the year the scheduled works had been completed at three of the slaughterhouses and work was in hand at three others.

The Government Committee has not yet reported upon the siting of central slaughterhouses under their modified centralisation scheme.

34. KNACKER YARD

There is one Knacker Yard which is situate in Barwell Ward. The premises are kept in a satisfactory condition, 11 inspections were made during the year. Attention was drawn to the need for colouring the meat with the prescribed green dye immediately after slaughter and dressing.

Other Foodstuffs, including Ice Cream, Medicines, Ointments, etc.

Not Satisfactory

Not Satisfactory

22. RECOMMENDATIONS

On the 1st March, the Vice Chairman of the Health Committee, the Clerk of the Council and the Chief Sanitary Inspector representing the Health Committee met the local butchers and meat traders Association to discuss the proposed regulations. 27 butchers attended. They were asked to express their opinion upon the position and on the following questions:-

- (1) The Council to create an abattoir.
- (2) If abattoir to continue as the Central Slaughterhouse as at present.
- (3) Use the existing Central Slaughterhouse to its full capacity and expand the facilities available by the use of the same licensed abattoirs.

Upon a show of hands being made, 16 voted in favour of question 1 and none against, 13 voted in favour of question 2 and none against.

A further meeting was held with the Association and afterwards the Health Committee decided that notice under s. 25(2) of the Food and Drugs Act 1938 be served upon the owners of slaughterhouses which were licensed in 1932, setting out a schedule of works to make the premises suitable for use and stating that if these were satisfactorily completed they would be given a license for the next period possible, expiring in July 1939.

7 owners of slaughterhouses undertook to do the required works and these slaughterhouses were used from 1st July onwards.

The schedule of works required was modified in accordance with the Ministry's Memorandum which stated that this action was to meet slaughtering requirements during an interim period only. The provision of a separate cooling room was not therefore pursued.

At the end of the year the scheduled works had been completed at three of the slaughterhouses and work was in hand at three others.

The Government Committee has not yet reported upon the sitting of central slaughterhouses under their modified certification scheme.

23. SUMMARY

There is one licensed yard which is situated in Newell Ward. The premises are kept in a satisfactory condition. It is proposed to close the premises during the year. Attention was drawn to the need for cleaning the meat with the prescribed given the immediately after slaughter and dressing.

A supply of town water has not yet been made available.

The Health Committee after considering Circular M.F.16/54 which was issued with the Model Byelaws, series II. on the Sanitary Conditions, Management, and Keeping of Records for Knacker's Yards decided the Byelaws should be adopted for use in the district subject to action being adjourned for one year to enable the licensed Knacker to make his premises conform with the provisions of the Byelaws.

35. FOOD AND DRUGS ACT, 1938

Constant attention has been given to food premises and the handling of food.

932 inspections were made at 618 premises. 272 contraventions were found, 129 being abated at the end of the year. 69 contraventions were abated from action commenced in 1953 and 1 from action commenced in 1952.

The type of premises visited and action taken, apart from Ice Cream premises and dairies referred to earlier, was as follows:-

PREMISES	VISITED	INSPECTIONS	CONTRAVENTIONS	ABATED
Meat Shops	88	102	62	21
Meat Rooms	21	35	14	6
Fried Fish & Chipped Potatoes	54	52	30	15
Canteens	21	44	7	3
Bakehouses	36	45	22	10
Others	281	303	106	51
TOTAL	501	581	241	106

36. LICENSED & CLUB PREMISES

In connection with the Clean Food Campaign it was decided to investigate the sanitary conditions existing in the Public Houses and Clubs in the district. In October 1953 a report was prepared on the proposed method of inspection and standard to be adopted in Licensed Premises, and this was submitted to, and accepted by, the Health Committee.

A supply of town water has not been made available.

The Health Committee after considering Circular M.T. 10/34 which was issued with the Model Bylaws, series II, on the Sanitary Conditions, Management, and Keeping of Poultry for Poultry's Birds decided the Bylaws should be adapted for use in the District subject to action being obtained for one year to enable the licensed butcher to raise his premises conform with the provisions of the Bylaws.

15. FOOD AND FEED ACT, 1924

Constant attention has been given to food premises and the handling of food.

232 inspections were made at 518 premises. 272 contraventions were found, 129 being noted at the end of the year. 69 contraventions were noted from action commenced in 1925 and 1 from action commenced in 1926.

The type of premises visited and action taken, apart from food premises and dairies referred to earlier, was as follows:-

PREMISES	VISITED	INSPECTIONS	CONTRAVENTIONS	AWARDED
Meat Shops	88	103	68	21
Meat Bona	21	32	12	6
Butch Shops	14	25	30	15
Other				
Chilled				
Poultry				
Confection	21	44	7	3
Ice Cream	16	15	22	10
Others	234	303	106	21
TOTAL	304	304	304	100

16. LITTER & CLUTTER ACT, 1924

In connection with the Clean Road Campaign it was decided to investigate the sanitary conditions existing in the Public Houses and Clubs in the District. In October 1925 a report was prepared on the proposed method of inspection and standard to be applied in licensed premises, and this was submitted to, and accepted by, the Health Committee.

It was then decided to fully explain the intentions of this investigation to the persons concerned and to discuss with them our proposals. This was achieved by circulating the above report to Brewery Company Representatives, Club Representatives and Licensees, and then holding two meetings early this year between the Chairman and Vice Chairman of the Health Committee, the Medical Officer of Health and Chief Sanitary Inspector and (a) representatives of the Brewery Companies, the Licensed Victuallers' Association and the Clubs, and afterwards (b) with the licensees of Public Houses, and the secretaries and stewards of licensed Clubs. At both meetings a full discussion took place and many questions and observations were dealt with. The trade representatives, at the first meeting, expressed their approval of the method we had adopted in meeting, and discussing the hygienic conditions of their premises etc., and they unanimously agreed to co-operate with the Health Committee and their officers in this work. A similar expression of co-operation was also received from the persons attending the second meeting.

A total of 81 premises were subsequently inspected, comprising 55 public houses (including hotels) and 26 licensed clubs. The main points of investigation were (a) ventilation (b) glass washing and sterilising (c) overspill beer (d) sanitary conveniences and (e) other hygienic aspects.

The inspections revealed the existence of many unsatisfactory conditions and a report upon these was submitted to the Health Committee, and recommendations were formulated and approved to alleviate these conditions. It was surprising to note that 8 premises still had lead beer lines: 6 premises had no glass washing sink in a suitable position: 6 premises had glass washing sinks with the waste discharging into a bucket below the sink and 31 washing up sinks had no hot water over the sink.

Before the end of the year a further inspection of the premises had been commenced and it was discovered that certain works had already been carried out at several premises to improve conditions. Following this inspection, schedules of required works are sent to the owner and occupier of each public house and the secretary in the case of a club.

I hope I shall be able to report that before the end of next year a considerable improvement in the hygienic standard in licensed premises will have been effected.

37. BYELAWS SECTION 15, FOOD & DRUGS ACT, 1938.

The provisions of the byelaws are constantly borne in mind when inspecting food premises.

The position in the open weekly market is about the same. No progress appears to have been made with the provision of adequate washing and sanitary facilities for the traders.

The protective display cases for the fish traders in the market are still in regular use although the traders still have a tendency to favour placing fish on the open stall.

It was then decided to fully explain the intention of this investigation to the persons concerned and to discuss with them our proposals. This was achieved by circulating the above report to Brewery Company Representatives, Club Representatives and Licensees, and then holding two meetings early this year between the Chairman and Vice Chairman of the Health Committee, the Medical Officer of Health and Chief Sanitary Inspector and (c) representatives of the Brewery Companies, the Licensed Victuallers Association and the Clubs, and afterwards (d) with the Licensees of Public Houses, and the representatives and stewards of Licensed Clubs. At both meetings a full discussion took place and many questions and observations were dealt with. The trade representatives at the first meeting, expressed their approval of the method we had adopted in meeting, and demanding the hygienic conditions of their premises etc., and they unanimously agreed to co-operate with the Health Committee and their officers in this work. A similar expression of co-operation was also received from the persons attending the second meeting.

A total of 87 premises were subsequently inspected, comprising 35 public houses (including hotels) and 52 licensed clubs. The main points of investigation were (a) ventilation (b) glass washing and sterilizing (c) overcrowding (d) sanitary arrangements and (e) other hygienic aspects.

The inspection revealed the existence of very unsatisfactory conditions and a report upon these was submitted to the Health Committee, and recommendations were formulated and approved to alleviate these conditions. It was surprising to note that 5 premises still had lead beer lines; 6 premises had no glass washing sink in a suitable position; 5 premises had glass washing sinks with the water discharging into a bucket below the sink and 34 washing up sinks had no hot water over the sink.

Before the end of the year a further inspection of the premises had been completed and it was discovered that certain works had already been carried out at several premises to improve conditions. Following this inspection, notices of required works are sent to the owner and completion of each public house and the secretary in the case of a club.

I hope I shall be able to report that before the end of next year a considerable improvement in the hygiene standard in licensed premises will have been effected.

IX. HYGIENE, SECTION 15, FOOD & DRUGS ACT, 1938

The provisions of the Act are constantly borne in mind when inspecting food premises.

The position in the open weekly market is about the same. No progress appears to have been made with the provision of adequate washing and sanitizing facilities for the traders.

The protective display cases for the fish traders in the market are still in regular use although the traders still have a tendency to favour placing fish on the open stall.

The open market was inspected 57 times, 149 omissions, mainly of inadequate protection of food were found. 61 being abated at the end of the year.

The protection of perishable food against contamination in the market becomes more important and at the same time more difficult. Congestion of motor vehicles and people increases weekly and how to protect food against carbon monoxide, the carbon dioxide from diesel engines, dust etc. is a problem. Fortunately the sale of the more susceptible type of perishable foods in the open market is a small proportion of the food sold.

38. FOOD POISONING

One case of food poisoning was notified by a doctor from one of the Leicester hospitals. The contacts were declared to be free from infection and specimens taken from the patient, a boy of 5, were negative upon his return from hospital.

The infective agent was *Salmonella typhi-murium*. No food was traced as the likely cause of the illness.

During the year 44 investigations were made regarding food poisoning and 110 specimens were collected and taken to the laboratory. 154 investigations were made regarding dysentery and 111 specimens collected and taken to the laboratory.

Close co-operation is maintained with the Director of the Public Health Laboratory at the Groby Road Hospital in the investigation of any suspected cases of food poisoning and I am grateful to Dr. N. S. Mair and his staff for assistance in this respect.

39. FACTORIES ACT, 1937

(a) There are 266 factories on the register. The trades carried on in these factories being as follows:-

Hosiery Manufacturers	106	Brought forward	225
Underwear Manufacturers	9	Manufacturing Chemist	2
Boot & Shoe "	29	Furniture & Upholstery	3
Engineering	26	Repairs	
Display Studios	4	Automobile Engineers	29
Elastic Braid Manufacturer	1	Knitted Goods	2
Public Transport Depots	4	Hosiery Machine Repairs	1
Printers	7	Mineral Water Manf.	1
Cardboard Box Manf.	5	Wheelwright	1
Builders & Timber Merchants	27	Rayon Winding	1
Dyers & Cleaners	5	Emulsions	1
Clothing Manufacturers	2		
	<u>225</u>		<u>266</u>
Cd. fwd.		Total	

110 inspections were made in connection with 20 premises and 38 contraventions or defects were found regarding the sanitary accommodation. 22 of the contraventions were abated at the end of the year.

(b) Outworkers

The returns of outworkers employed by factories in the Urban District were as follows:-

	<u>February</u>		<u>August</u>	
Returns received from	12	firms	125	firms
Outworkers employed	139		643	
Outworkers living in other districts	30		117	
Outworkers in our district employed by firms outside the Urban District	-		4	

Information sent to other local authorities of outworkers residing in their district and employed by firms in the Urban District:-

Atherstone R.D.C.	3	Brought forward	84
Market Bosworth R.D.C.	10	Blaby R.D.C	23
Meriden R.D.C.	3	Lutterworth R.D.C.	2
Coventry C.B.	3	Leicester C.B.	1
Nuneaton B.	58	Rugby R.D.C.	7
Bedworth U.D.C	7		
Carried fwd.	<u>84</u>	Total	<u>117</u>

The number of outworkers following our August return of 643 shows a decrease from last year's return of 715.

No instances occurred of outwork being performed in unwholesome premises.

40. PREVENTION OF DAMAGE BY PESTS ACT, 1949

1399 inspections were made in connection with the destruction of rats, mice or pests. The Rodent Operator's services are in constant demand which is an indication of the good job that is being done in this work. The testing of drains or sewers where infestations are found has continued, the percentage found to be defective is rather less than last year.

The following return was sent to the Ministry of Agriculture and Fisheries Infestation Division upon the work done for one year ending 31st March 1955.

110 inspections were made in connection with 20 premises and 30 contraventions or defects were found regarding the sanitary accommodation. 22 of the contraventions were abated at the end of the year.

(b) Outworkers

The return of outworkers employed by factories in the Urban District was as follows:-

Amount	Factory	Return received from
125	15	Outworkers employed
67	130	Outworkers living in other districts
117	30	Outworkers in our district employed
4	-	by firms outside the Urban District

Information sent to other local authorities of outworkers residing in their district and employed by firms in the Urban District:-

34	Brought forward	3	Whitstone R.D.C.
23	Wally R.D.C.	10	Harriet Bowyer R.D.C.
2	Latton R.D.C.	3	Merton R.D.C.
1	Latton C.D.	3	Goverly R.D.
7	Rugby R.D.C.	58	Merton R.D.C.
117	Total	76	Corried Rd.

The number of outworkers following our August return of 647 shows a decrease from last year's return of 715.

No instances occurred of outwork being performed in unsuitable premises.

10. PREVENTION OF POLLUTION BY FACTS ACT, 1962

1992 inspections were made in connection with the prevention of water or gas. The Inspectors' services are in constant demand which is an indication of the good job that is being done in this work. The finding of defects on sewers where inspections are found has declined, the percentage found to be defective is rather less than last year.

The following return was sent to the Ministry of Agriculture and Fisheries Inspection Division upon the work done for one year ending 31st March 1955.

PREVENTION OF DAMAGE BY PESTS ACT, 1949

Block control schemes	-	-	-	-	-

There was no major infestation during the year, the number of minor infestations found and dealt with, 204 was slightly more than last year's figure of 172.

Contract Premises

33 business premises were on contract with the department for the disinfection of their premises from rats or mice, and in three cases for crickets or beetles also.

Sewer Baiting

The twelfth treatment of the sewers was done between the 17th May and 23rd September, 851 manholes were pre-baited, 55 showed a partial take of prebait and 85 a complete take. These manholes were then poison baited with 2½% Zinc Phosphide and Sausage Rusk.

The number of manholes treated was 68 more than last year and the number showing takes of pre-bait was 100 less. This would appear to indicate that the results from our previous baiting plus the continuing progress being made with the repair of defective drainage systems is producing a good result.

The sewer baiting work was done on the first, second and fourth days in the week. This arrangement enables the Rodent Operator and General Assistant to then deal with other urgent work without too much delay.

41. STAFF

The establishment is the same as last year, 4 sanitary inspectors, one unqualified general assistant, two female clerks and one rodent operator. The only difference in the whole staff from 1939 being one additional junior female clerk and the rodent operator who was appointed in 1944 when the Urban Council became the authority for the administration of the Rats and Mice Destruction Act.

Since 1946 when the establishment was last reviewed many additional duties have been placed upon the department. The return of private slaughtering has increased our meat inspection duties and the intensification of our efforts to rid the district of its unfit houses has also required additional time. The position has now been reached that if any additional duties are placed upon the department, additional staff will be needed to perform them.

There was no report information during the year, the number of minor infestations found and dealt with, 204 was slightly more than last year's figure of 172.

Control Measures

55 treatment measures were in contact with the department for the infestation of their premises from 1st to 15th, and in three cases for control in pest.

Surveying

The twelfth treatment of the houses was done between the 15th May and 31st September, 51 houses were pre-treated, 25 showed a partial take of pre-treat and 25 a complete take. These houses were then pre-treated with 25 2nd phosphide and fumigant dust.

The number of houses treated was 55 more than last year and the number showing signs of pre-treat was 100 less. This would appear to indicate that the results from our previous pre-treat plus the continuing progress being made with the repair of defective drainage systems is producing a good result.

The surveying work was done on the 1st, 2nd and 4th days in the week. This arrangement enables the District Operator and General Assistant to then deal with other urgent work without too much delay.

4. STAFF

The establishment in the year last year, 4 sanitary inspectors, one unqualified general assistant, two female clerks and one rodent operator. The only difference in the whole staff from 1933 being one additional female clerk and the rodent operator who was appointed in 1934 when the Urban Council became the authority for the administration of the Rats and Lice Department.

Since 1935 when the establishment was last reviewed very additional duties have been placed upon the department. The return of private slaughter has increased our pest inspection duties and the intensification of our efforts to rid the district of its unfit houses has also required additional staff. The position has now been reached that if any additional duties are placed upon the department, additional staff will be needed to perform them.

TABLE OF VITAL STATISTICS FOR THE URBAN COUNCIL

Year		Population	Births	Birth Rate	Deaths	Death Rate	Infant Mortality Rate
1899	...	11,019	361	30.08	193	16.08	160.6
