1943.

INTERIM REPORT

ON THE STATE OF

THE PUBLIC HEALTH

OF THE

Horsham Rural District

BY THE

Medical Officer of Health,
KENNETH N. MAWSON
M.B., Ch.B., D.P.H.

WEST SUSSEX NORTH-EASTERN COMBINED DISTRICT.

October, 1944.

Health Department,
Comewell House,
North Street,
Horsham,
Sussex.

To the Chairman and Members of the Horsham Rural District
Council.

Mr. Chairman, Ladies and Gentlemen,

I have pleasure in presenting my report on the health of the District for the year 1943. For reasons with which the Council will now be familiar, the report is an abbreviated one. For reasons of national security, certain detailed information has been excluded in accordance with the instructions of the Ministry of Health, but full statistics are available to any member of the Council who may require them.

I would draw your attention to the following points, as set out below:-

(1). Births and Deaths.

- (a) There were 410 live births during the year. The figures for previous years were as follows:-

1938.....	285
1939.....	320
1940.....	309
1941.....	353
1942.....	377
1943.....	410

Owing to fluctuations in the figures for total population, the birth-rates give a more accurate picture.

The birth rates for these years are as follows:-

1938.....	12.76	per thousand.
1939.....	14.29	" "
1940.....	11.84	" "
1941.....	13.99	" "
1942.....	15.15	" "
1943.....	16.83	" "

WEST VIRGINIA HEALTH COMMISSION

Health Department,
Cannell House,
North Street,
Martinsburg,
West Virginia.

October, 1944.

To the Chairman and Members of the House of Delegates,
West Virginia.

Mr. Chairman, Ladies and Gentlemen,

I have the honor to present to you the report of the Health of the District for the year 1943. This report is an attempt to present a summary of the health conditions in the District for the year 1943. It is based on the data furnished by the local health officers and is intended to give you a general idea of the health conditions in the District for the year 1943.

I would like to call your attention to the fact that the health conditions in the District for the year 1943 were generally good. The death rate was low and the birth rate was high.

(1) Births
The number of births in the District for the year 1943 was 1,234. This is a decrease of 10% from the number of births in the year 1942.

1938	1,345
1939	1,280
1940	1,200
1941	1,150
1942	1,370
1943	1,234

Going to the question of the health of the total population, the health conditions in the District for the year 1943 were generally good. The death rate was low and the birth rate was high.

The birth rate for the year 1943 was 20.5 per 1,000 live births. This is a decrease of 1.0% from the birth rate in the year 1942.

1938	21.5
1939	20.5
1940	19.5
1941	18.5
1942	21.5
1943	20.5

The number of illegitimate births has tended to increase as shown:-

1938.....	14
1939.....	15
1940.....	9
1941.....	20
1942.....	25
1943.....	52

(b). The number of deaths during these years are shown below. The figures in brackets indicate the death rate.

1938.....	271	(12.13	per thousand).
1939.....	311	(13.15	" ").
1940.....	302	(11.96	" ").
1941.....	314	(12.44	" ").
1942.....	297	(11.94	" ").
1943.....	299	(12.28	" ").

(2). Notifiable Infectious Diseases.

Reference to the table of notifications received, given in the body of the report, shows that the incidence of infectious disease remains low. It is a reason for satisfaction that these figures compare very favourably with the years immediately preceding the outbreak of war.

It will be noted that 3 cases of Diphtheria occurred. There was a minor outbreak of Measles, and 483 notifications were received in 1943. The disease was of a mild type. It is realised that the notification-rate in respect of both Measles and Whooping-Cough does not represent the true incidence of these diseases. Unfortunately many parents still regard them as trivial complaints and do not seek medical advice.

The incidence of Scarlet Fever during 1943 was rather above the average, 54 notifications being received during the year as against 45 during 1942.

(3). Diphtheria Immunization.

It was estimated that, at the end of 1943,

The number of illegitimate births has tended to increase as follows:-

1938.....	14
1939.....	15
1940.....	16
1941.....	20
1942.....	27
1943.....	32

(b). The number of deaths during the years are shown below. The figures in brackets indicate the deaths.

1938.....	21 (12.1 per cent)
1939.....	21 (12.1 per cent)
1940.....	21 (12.1 per cent)
1941.....	21 (12.1 per cent)
1942.....	27 (12.1 per cent)
1943.....	32 (12.1 per cent)

(2). Scarlet Fever

Referring to the table of illegitimate births, given in the body of the report, it is a reason for belief that these figures compare very favourably with the figures immediately preceding the outbreak of 1942.

It will be noted that 3 cases of Diphtheria occurred. There was a minor outbreak of measles and 483 notifications were received in 1943. The disease was of a mild type. It is realised that the notification rate in respect of both measles and Whooping Cough does not represent the true incidence of these diseases. Unfortunately many parents still regard them as trivial complaints and do not seek medical advice.

The incidence of Scarlet Fever during 1943 was rather above the average, 24 notifications being received during the year as against 45 during 1942.

(3). Diphtheria Immunisation

It was estimated that at the end of 1943

Diphtheria Immunization (Cont).

the percentage of children inoculated were 52% of those under 5 years, and 95% of those between 5 and 15 years.

Although satisfactory, these figures do not show any material improvement on those for the previous year. It is sincerely to be hoped that the immunization percentage can be maintained, and even improved. New methods of propaganda are now being used, in cooperation with the County Council, particular attention being paid to the younger age group. Only by continued effort, including the use of the new "greeting cards" sent on a child's first birthday and regular house-to-house visiting, will it be possible to maintain the high level reached.

(4). Scabies, Tuberculosis & Venereal Diseases.

Notes dealing with these matters will be found in the body of the report.

Although every effort has been made to maintain the routine work of the Department, it will be noted that there was a reduction in the number of visits paid in connection with Dairies and Cowsheds etc. The position of Additional Sanitary Inspector has remained vacant since the suspension of Mr. Colborne in 1940, and serious inroads on the time of the Senior Inspector have been made as a result of his duties as Surveyor.

There can be no doubt that the present staff is inadequate to cope with the work of a Rural District of this size.

I would like to acknowledge the conscientious service of all members of the staff of the Health Department, and the cooperation of the Chief Officers of the Council. I am grateful to the Chairman & Members of the General Purposes Committee, with whom my work is particularly connected, for their support and consideration.

I am, Ladies and Gentlemen,
Your Obedient Servant,

L. Lawson

Medical Officer of Health.

Diphtheria Immunization (Cont.)
The percentage of children inoculated
were 75% of those under 5 years, and 95%
of those between 5 and 15 years.

Although satisfactory, these figures
do not show any material improvement on
those for the previous year. It is
sincerely to be hoped that the
percentage can be maintained, and even
improved. New methods of propaganda are
now being used, in cooperation with the County
Council, particular attention being paid to
the younger age group. Only by continued
effort, including the use of the "traveling
cards" sent on a child's first birthday and
regular home-to-home visiting, will it be
possible to maintain the high level reached.

(4). Scholarships & Vocational Training

(-)
Notes dealing with these matters will be
found in the body of the report.

Although every effort has been made to maintain the
routine work of the Department, it will be noted that
there was a reduction in the number of visits paid in
connection with Dairies and Cowsheds etc. The position
of Additional Sanitary Inspector has remained vacant since
the suspension of Mr. Colborne in 1940, and serious
inroads on the time of the Senior Inspector have been
made as a result of his duties as Surveyor.

There can be no doubt that the present staff is
inadequate to cope with the work of a Rural District of
this size.

I would like to acknowledge the constant help and advice
of all members of the staff of the Health Department, and
the cooperation of the Chief Officer of the Council. I am
grateful to the Chairman & Members of the General Purposes
Committee, with whom my work is particularly connected, for
their support and consideration.

I am, Ladies and Gentlemen,
Yours obedient servant,

Medical Officer of Health.

Public Health Officers of the Rural Authority.

(a). Medical.

Kenneth N. Mawson, M.B., Ch.B., D.P.H.,
Medical Officer of Health, part time with
other districts in the Sanitary Combine, and,
as Assistant County Medical Officer,
School Medical Inspector for the area.

(b). Sanitary Inspectors.

V. Bartrim, A.R.S.I., Senior Sanitary
Inspector and Surveyor under Building
Bye-laws. Housing and Meat Inspector
and Petrol and Carbide Inspector.

L.J.B. Baker, M.S.I.A., Sanitary Inspector.
Housing and Meat Inspector and Petrol and
Carbide Inspector.

(1). STATISTICS & SOCIAL CONDITIONS OF THE AREA, 1943.

Area (Acres).....	79,970
Population at Census, 1931.....	20,710
Number of Inhabited Houses (end of 1943) according to Rate Books....	6,595
Rateable Value.....	£168,850
Sum represented by a Penny Rate.....	£689

(2). SOCIAL CONDITIONS.

The district is largely agricultural in character with a few large country houses, but a certain amount of ribbon development had taken place around Crawley and Horsham in the years prior to the outbreak of war. There are two brickworks and a few small factories.

(3). EXTRACTS FROM VITAL STATISTICS OF THE YEAR.

	<u>Total</u>	<u>M.</u>	<u>F.</u>	
Live Births (Legitimate...)	358	177	181	Birth Rate =
(Illegitimate...)	52	24	28	16.83
Still Births.....	14	8	3	Rate per 1,000
				Total Births =
				34.14
Deaths.....	299	155	144	Death Rate =
				12.28
England & Wales Birth Rate.	16.5			Death Rate = 12.1
West Sussex Rural Districts Birth Rate =				18.51
Death Rate =				13.05
Deaths from Puerperal Causes:-				
	<u>Deaths.</u>	<u>Rate per 1,000</u>	<u>Total Births.</u>	
Puerperal Sepsis.....	0		0.00	
Other Puerperal Causes.	0		0.00	
Death Rate of Infants under one year of age:-				
All Infants per 1,000 Live Births.....				26.83
Legitimate Infants per 1,000 Legitimate Live Births.				25.11
Illegitimate Infants per 1,000 Illegitimate Live Births.				38.46

(1) STATISTICS & SOCIAL CONDITIONS OF THE AREA, 1941

Area (Acres).....	19,970
Population at Census, 1931.....	20,710
Number of Inhabited Houses (end of 1941) according to Rate Books.....	6,795
Rateable Value.....	£108,850
Sex represented by a Family Rate.....	2089

(2) SOCIAL CONDITIONS

The district is largely agricultural in character with a few large country houses, but a certain amount of ribbon development has taken place around Llangyfelach and Hortham in the years prior to the outbreak of war. There are two brickworks and a few small factories.

(3) ESTIMATES FROM VITAL STATISTICS OF THE YEAR

	Total	Male	Female
Live Births (legitimate).....	188	107	181
(illegitimate).....	52	24	28
Still Births.....	14	8	6
Total Births =	254	149	205
Rate per 1,000 =	12.25	12.1	12.4
Deaths.....	299	157	144
Rate per 1,000 =	14.5	14.5	14.5
England & Wales Birth Rate, 1941 = 15.2			
West Sussex Rural Districts Birth Rate = 13.5			
Deaths Rate = 13.05			

Deaths from Puerperal Cause.....	0
Rate per 1,000 Total Births.....	0.00
Other Puerperal Causes.....	0
Rate per 1,000 Total Births.....	0.00

Deaths Rate of Infants under one year of age.....	0
Rate per 1,000 Live Births.....	0.00
Legitimate Infants per 1,000 Legitimate Live Births.....	0.00
Illegitimate Infants per 1,000 Illegitimate Live Births.....	0.00

(There were 9 Legitimate, and 2 Illegitimate, Deaths).

(Infant Mortality Rate for England & Wales..... 49).

Deaths from Cancer (all ages)..... 51

Deaths from Measles (all ages)..... 0

Deaths from Whooping-Cough (all ages)... 0

Deaths from Diarrhoea (under 2 years
of age)..... 1

The chief causes of death were:-

Heart Disease..... 90

Cancer..... 51

Cerebral Haemorrhage..... 39

Pneumonia..... 18

Tuberculosis (all forms)..... 8

(There were 9 legitimate, and 2 illegitimate, Deaths).
 (Infant Mortality Rate for England & Wales..... 42)
 Deaths from Cancer (all ages)..... 51
 Deaths from Measles (all ages)..... 0
 Deaths from Whooping-Cough (all ages)..... 0
 Deaths from Diphtheria (under 5 years of age)..... 1

The chief causes of death were:-

Heart Disease..... 90
 Cancer..... 51
 Cerebral Haemorrhage..... 39
 Pneumonia..... 18
 Tuberculosis (all forms)..... 6

NOTIFIABLE INFECTIOUS DISEASES.

The following cases were notified during 1943.
The figures in brackets indicate the corresponding
number for the previous year.

Diphtheria.....	3	(-)
Scarlet Fever.....	54	(45)
Whooping Cough.....	7	(36)
Measles.....	483	(61)
Erysipelas.....	3	(1)
Pneumonia.....	7	(13)
Puerperal Pyrexia.....	4	(4)
Dysentery.....	1	(3)
C.S.F.....	1	(2)

Of the cases of Diphtheria notified, one was an adult. Both the other patients were children; - one, having contracted the infection outside the area, was diagnosed on arrival in the district, while the other, a local child, had not been inoculated.

No cases of any disease of the Typhoid-Paratyphoid group occurred.

The Council makes an annual grant to the local Nursing Association towards the cost of provision of nursing for Measles and Pneumonia.

T U B E R C U L O S I S

The number of cases added to the Register during the year.. 28

Pulmonary Males... 9	Non-pulmonary Males... 7
Females... 5	Females... 7
<u>14</u>	<u>14</u>

There were 8 deaths from Tuberculosis; 6 Pulmonary (3 Male, 3 Female) and 2 Non-Pulmonary (Female).

The number of cases of Tuberculosis on the Register at the 31st December, 1943 was 194.

NOTIFIABLE INFECTIOUS DISEASES

The following cases were notified during 1953. The figures in brackets indicate the corresponding number for the previous year.

Diphtheria	1	(1)
Scarlet Fever	1	(1)
Whooping Cough	1	(1)
Mumps	1	(1)
Erysipelas	1	(1)
Pneumonia	1	(1)
Paratyphoid	1	(1)
Dysentery	1	(1)
C. & P.	1	(1)

Of the cases of Diphtheria notified, one was an adult. Both children patients were children of one, having contracted the infection outside the area, was diagnosed as diphtheria in the district, while the other, a local child, had not been vaccinated. No cases of any disease of the type notifiable group occurred.

The Council received an annual report from the local Health Authority regarding the control of infectious diseases for 1952 and 1953.

THE HEALTH AREA

The number of cases coded in the Registrar General's tables for 1953 were as follows:

There were 3 cases of diphtheria, 1 case of scarlet fever, 1 case of whooping cough, 1 case of mumps, 1 case of erysipelas, 1 case of pneumonia, 1 case of paratyphoid, 1 case of dysentery, and 1 case of C. & P. The number of cases of these diseases for 1952 was as follows:

DIPHTHERIA IMMUNISATION.

Regular sessions continued as in previous years. Monthly clinics were held at Horsham Health Centre and at Crawley First Aid Post, and in addition immunization was carried out at the village schools.

In addition, however, a certain number of children are inoculated privately, by their family doctors, and it is thus difficult to make an accurate assessment of the percentage protected.

Regular returns are made, each six months, to the Ministry of Health, of the number of children inoculated. On the 31st December, 1943, it was estimated that 52% of children under 5 years, and 95% of those between 5 - 15 yrs. had been immunized. The corresponding figures for the previous year were 48% and 95%. It must be remembered that the optimum figure for the younger group would be 80%, as inoculation is not carried out until a child reaches his first birthday.

TREATMENT OF SCABIES AND VERMINOUS CONDITIONS.

Full particulars were given, in the last Annual Report, of the arrangements made for the treatment of these conditions. Women and children are dealt with at Tan Cottage Sick Bay, and adult males receive treatment at the local Military Hospital. This scheme has worked satisfactorily during the year under review. A few patients, mainly symptomless contacts, have received home treatment.

The total number of patients and contacts treated during the year was :-

- (a). Tan Cottage Sick Bay:- 52 In-Patients.
231 Out-Patients.
- (b). Base Hospital (Males). 11.
- (c). Home Treatment. 67.
- (d). St. Richards Hospital, Chichester. 5 In-Patients.

It will be seen that there has been an increase in the total number of treatments given; i.e. 366 as compared with 276 in 1942.

GITHEKIA LAMINATION

Regular sessions continued as in previous years. Monthly clinics were held at William Health Centre and at Crumley First Aid Post and in addition immunisation was carried out at the village school.

In addition, however, a certain number of children are immunised privately, by their family doctors, and it is thus difficult to make an accurate assessment of the percentage protected.

Regular returns are made, each six months, to the Ministry of Health, of the number of children immunised. On the 1st December, 1951, it was estimated that 52 of children under 5 years, and 107 of those between 5-15 years had been immunised. The corresponding figures for the previous year were 44 and 75. It must be remembered that the vaccination for the younger group would be due, as vaccination is not carried out until a child reaches the first birthday.

TREATMENT OF DERMATITIS AND ALLERGIC REACTIONS

Full reports are given in the last Annual Report of the arrangements made for the treatment of these conditions. During the year the clinic was held at the local Ministry of Health. This scheme has worked satisfactorily during the year under review. A few patients, mainly symptomatic contacts, have received some treatment.

The total number of patients and contacts treated during the year was:-

(a). The Cottage Sick Bay, 32 in-patients.
211 Out-patients.

(b). Base Hospital (Wales), 11.

(c). Home Treatment, 67.

(d). St. Nicholas Hospital, Chester, 7 in-patients.

It will be seen that there has been an increase in the total number of treatments given, 556 as compared with 520 in 1950.

Treatment of Scabies & Verminous Conditions (Cont).

It will thus be seen that there has been a rise, during the year, in the number of cases brought to the notice of the Department. This does not necessarily prove an increase in the local incidence of the disease, as the facilities provided by the Council have become better known to both practitioners and the public.

It will also be noted that there has been a considerable reduction in the number receiving In-Patient treatment. It has been found possible to effect this economy without any loss of efficiency in treatment.

There can be little doubt that if the general population were to practise the elementary precaution of regular ablution, scabies would become a much less serious problem.

LABORATORY FACILITIES.

Routine bacteriological work throughout the year was again referred to the Emergency Public Health Laboratory at Christ's Hospital.

The total number of specimens was 974, made up as follows:-

	Nose & Throat Swabs.	Faeces & Urine.	Blood.	Sputum.
Jan. - March.	199	21	7	8
April - June.	69	17	7	6
July - Sept.	71	19	2	5
Oct. - Dec.	64	13	1	4
	Waters.	Miscellaneous.	TOTAL.	
Jan. - March.	114	15	364	
April - June.	68	3	170	
July - Sept.	171	11	279	
Oct. - Dec.	70	9	161	

TRANSFERRING ALABAMA'S VETERINARY CONDITIONS (Cont.)

It will also be noted that there has been a considerable reduction in the number receiving treatment. It has been found possible to do this without any loss of efficiency in treatment. There can be little doubt that in the general population there is a tendency to over-prescribe of regular medicine, antibiotics would become a major health service problem.

LABORATORY FACILITIES

During the past year, the laboratory work throughout the year was again referred to the Emergency Public Health Laboratory at Chapel Hill, N.C.

The total number of specimens was 572, made up as follows:

Month	Specimens	Specimens	Specimens	Specimens
Jan. - March	100	100	100	100
April - June	100	100	100	100
July - Sept.	100	100	100	100
Oct. - Dec.	100	100	100	100
Total	400	400	400	400
Jan. - March	100	100	100	100
April - June	100	100	100	100
July - Sept.	100	100	100	100
Oct. - Dec.	100	100	100	100
Total	400	400	400	400

GENERAL PROVISION OF HEALTH SERVICES IN THE AREA.

Accommodation for Infectious Disease.

There has been no change in the arrangements whereby patients are admitted to Swandean Isolation Hospital, Worthing. By agreement with the Corporation of the Borough of Worthing, eight beds are reserved for cases from the Horsham Rural District.

The following cases of infectious disease were admitted during the period ending 31st December, 1943:-

<u>Swandean Isolation Hospital.</u>	<u>East Grinstead Is. Hospital.</u>
S. Fever..... 37	Diphtheria..... 1
Diphtheria..... 1	Measles..... 1
<u>Earlswood Isolation Hospital.</u>	<u>Royal Alexandra Hosp. Brighton.</u>
Diphtheria..... 1	C.S.M..... 1
<u>Ganavan Sick-Bay, Cocking.</u>	
Measles..... 5	

HOSPITALS PROVIDED OR SUBSIDISED BY THE COUNTY COUNCIL.

(1). TUBERCULOSIS.

There is no change from the previous year with regard to the treatment of tuberculosis. Cases are admitted either to Aldingbourne House (accommodation 70 persons) or to a ward at Worthing Isolation Hospital, Swandean (accommodation 12 beds), whilst surgical cases are admitted to St. Richards Hospital, Chichester, to the Royal Sea-Bathing Hospital now at Bracknell in Berks., or to the Lord Mayor Treloar's Hospital, Alton, Hants, (for children).

(2). MATERNITY.

The County Council arranged for resident and evacuated expectant mothers to be admitted to:-

- (a). Brighton Hospital for Women.
- (b). Southlands Hospital, Shoreham.
- (c). Worthing Hospital Maternity Home.
- (d). Improvised Maternity Homes at Haslemere, Hindhead and Woking.

GENERAL PROVISIONS OF HEALTH ACT, 1947

Accommodation for Infectious Diseases

There has been no change in the arrangements for the treatment of infectious diseases. Patients are admitted to Swansdon Isolation Hospital, Worthing. By agreement with the Corporation of the Borough of Worthing, eight beds are reserved for cases from the Horsham Rural District.

The following cases of infectious diseases were admitted during the period ending 31st December, 1947:

Swansdon Isolation Hospital

Diphtheria	37
Scarlet fever	1

Earlswood Isolation Hospital

Diphtheria	1
------------	---

General Sick-Bay, Colchester

Measles	5
---------	---

HOSPITALS PROVIDED OR SUBSIDISED BY THE COUNTY COUNCIL

(1) TUBERCULOSIS

There is no change from the previous year with regard to the treatment of tuberculosis. Cases are admitted either to Aldingbourne House (accommodation 70 persons) or to a ward at Worthing Isolation Hospital, Swansdon (accommodation 12 beds), whilst surgical cases are admitted to St. Richard's Hospital, Chichester, to the Royal Sea-Bathing Hospital, now at Boscawen in Boscawen, or to the Lord Mayor Treloar's Hospital, Alton, Hants, (for children).

(2) MATERNITY

The County Council provides for resident and evacuated expectant mothers to be admitted to:

- Alton Hospital for Women.
- Southlands Hospital, Shoreham.
- Worthing Hospital Maternity Home.
- Evacuated Maternity Homes at Haslemere, Guildford and Worthing.

(3). SMALLPOX.

The County Council's reservation of two beds in the Brighton Small-Pox Hospital at Fulking remains unchanged.

(4). VENEREAL DISEASES.

Under the County Scheme, regular Clinics are held at Worthing and Portsmouth.

During the year, additional facilities have been made available locally both to male and female patients. Drs. Morgan and De Lacey now carry out this work, in their normal surgery hours, on behalf of the County Council, under the new "General Practitioner Scheme."

(5). GENERAL.

St. Richard's Hospital, Chichester, administered by the Public Health Committee of the County Council, takes cases from the area not considered suitable for admission to the General Hospital.

HOSPITALS NOT SUBSIDISED BUT AVAILABLE
FOR PATIENTS RESIDENT IN THE DISTRICT.

Horsham General Hospital.

The accommodation at this hospital having been extended, under the Emergency Medical Services, at the outbreak of war, 49 beds are provided. In addition, 34 additional E.M.S. beds are available at the Holbrook Park Annexe.

During the last five years, the Hospital has been fortunate in obtaining the services of a number of eminent consultants (in general medicine and surgery and the various specialities), the majority of whom are on the Honorary Medical Staff of the larger London hospitals. This has, of course, proved of great benefit to the local population, many of whom would have been obliged to travel to London for further advice.

The Hon. Consulting Staff hold regular Out-Patient sessions, and, by agreement with the County Council, the Health Centre adjoining has been placed at the disposal of the Hospital for use as an Out-Patient Department, when not in use for County work.

(3) STAFF

The County Council's reservation of two beds in the Brighton Small-Pox Hospital at Fulking remains unchanged.

(4) VENEREAL DISEASES

Under the County Scheme, regular Clinics are held at Worthing and Portsmouth.

During the year, additional facilities have been made available locally both to male and female patients. Drs. Morgan and De Lacey now carry out this work in their consulting hours, on behalf of the County Council, under the new "General Practitioner Scheme".

(5) GENERAL

At St. Richard's Hospital, Chichester, administered by the Health Committee of the County Council, taken over from the area not considered suitable for admission to the General Hospital.

HOSPITALS NOT SUBSIDISED BUT AVAILABLE

Korsham General Hospital

The accommodation at this hospital having been extended, under the Emergency Medical Services, at the outbreak of war, 42 beds are provided. In addition, 34 additional beds are available at the Haydock Park Annex.

During the last few years, the Hospital has been fortunate in obtaining the services of a number of eminent consultants in general medicine and surgery and the various branches, the majority of whom are on the honorary medical staff of the larger London hospitals. This has, of course, proved of great benefit to the local population, many of whom would have been obliged to travel to London for further advice.

The Hon. Consulting Staff hold regular Out-Patient sessions, and by arrangement with the County Council, the Hon. Consulting Staff are provided with the disposal of the Hospital for use as an Out-Patient Department, when not in use for County work.

The Crawley & District Hospital has accommodation for 28 patients. A modern X'ray plant was installed during the year.

CLINIC & TREATMENT CENTRES.

The Health Centre in Hurst Road, adjoining the Horsham General Hospital, is under the control of the County Education Committee. Special sessions are held for Minor Ailments, Vision Testing, Diphtheria Immunisation, and the treatment of Orthopaedic Defects, and a School Dental Surgeon is in attendance.

In addition Child Welfare and Ante-natal Clinics are held in the building, and there is a weekly Tuberculosis Dispensary. As mentioned previously, the Clinic premises at present serve as an Out-Patient Department of Horsham Hospital.

There is in addition a small Maternity and Child Welfare Centre in Leechpool Lane, Roffey, where Welfare and Ante-natal Clinics are held.

By permission of the Rural District Council, a fortnightly Minor Ailment Clinic for school-children is held at the First-Aid Post in Crawley. In addition, this accommodation is utilised by the School Dental Surgeon when treating children from the Crawley Schools.

AMBULANCE FACILITIES.

- (a). The Morris Ambulance, jointly owned by the Urban and Rural District Councils, and used for the conveyance of patients suffering from infectious diseases, was purchased in 1927. Although maintained in fairly good running order, the vehicle is rather out of date.

The Caretaker of the Urban Council Offices acts as attendant for this ambulance. It is therefore necessary on occasions to arrange for the Swandean Hospital Ambulance, with a nurse in attendance, to collect cases where the patient is a woman, or a child acutely ill.

- (b). For the collection and transfer of cases of non-infectious sickness and accident in the parts of the Rural District around the town of Horsham, the Horsham Division of the St. John Ambulance Brigade maintains a vehicle at their Headquarters in Park Street, a resident driver being employed. The duties of attendant are undertaken by the Nursing Division of the Brigade. No grant is made by the Council in connection with this work.

The town of Crawley and the surrounding district are served by a vehicle provided by the Crawley Division of the St. John Ambulance Brigade. The Crawley Nursing Division of the Brigade provide the necessary attendants.

SANITARY CIRCUMSTANCES OF THE AREA.

WATER.

I am indebted to Mr. S. T. Cox, the Council's Water Engineer, for the following comments:-

"A sufficient supply exists at the Pumping Stations, of good quality water which unfortunately contains an excess of iron. This, however, is being dealt with at the Nutbourne Station, from which about 50% of the supply is obtained, by Candy Iron Removal plants. The results from this station are quite satisfactory. At the Smock Alley and Washington Stations the water is pumped direct to consumers untreated; complaints are received on account of the iron, but work is already in progress at the Smock Alley site on a duplicate plant as that of Nutbourne. For Washington the matter is in the hands of the Consulting Engineers."

In addition to the sources mentioned above, additional supplies were taken for the north-eastern part of the District, including Crawley, from the East Surrey Water Company and the mid-Sussex Joint Water Board.

A number of complaints were received from consumers on the higher levels regarding intermittent failure of supply. The areas affected were the upper part of the village of Rudgwick, Kingsfold, and the area between Roffey Corner and Faygate.

The number of dwelling-houses connected to the Council's mains, at the end of the year, was 4,685. This represents 71% of the houses in the District. Outside standpipes for the supply of properties are not permitted by the Council.

Regular samples of water from the mains, from all sources, are taken by the staff of the Health Department, and satisfactory reports were received throughout the year. In all, 423 water samples were submitted to the Christ's Hospital Laboratory for bacteriological examination during the year, this figure including both main supplies and wells serving dwelling houses and farms.

SAVITARY CIRCUMSTANCES OF THE AREA

WATER

I am indebted to Mr. J. E. Cox, the Council's
Water Engineer, for the following comments:

"Sufficient supply exists at the pumping
station, of good quality water which unfortunately
contains an excess of iron. This, however, is being
dealt with at the Huddersfield Water Treatment
Works of the supply is obtained by gravity from
reservoirs. The reservoirs have been recently
reconstructed. At the Huddersfield and
Barnsley the water is pumped direct to consumers.
Unfiltered water is not used on account of the
iron but is already in progress at the Huddersfield.
Also a new dam is being built at the Huddersfield.
For the purpose of the water supply the Huddersfield
Council is in the hands of the

In addition to the sources mentioned above,
additional supplies were taken for the north-eastern
part of the district from the East
Barnsley Water Company and the Huddersfield Water
Company.

A number of complaints were received from
consumers of the higher levels regarding the
quality of supply. The area affected was the upper
part of the village of Huddersfield, and the area
between Hotten and Huddersfield.

The number of dwelling-houses connected to the Council's
main, at the end of the year, was 4,687. This represents
1/3 of the houses in the district. The area is being
the supply of properties not yet connected to the Council's.

Regular samples of water from the main, from all
sources, are taken by the staff of the Health Department,
and satisfactory reports were received throughout the year.
In all, 423 water samples were submitted to the Council's
Hospital Laboratory for bacteriological examination during
the year, this figure including both main supplies and
wells serving dwelling houses and farms.
