ANNUAL REPORT OF THE MEDICAL OFFICER OF HEALTH FOR THE YEAR 1967

To the Chairman and Members of the Health and Housing Committee.
Mr. Chairman, ladies and Gentlemen,

In the field of medicine at least, 1967 will be remembered as the year of the first human Heart Transplant.

A step into the unknown which held the rapt attention of the whole world for a time.

Any assault upon new frontiers has always attracted the attention of mankind with almost a macabre fascination reaching far back into history to the time when it was firmly believed that if man travelled far enough along the surface of the earth he would fall off the edge of the world.

None the less, then, as now there were those who wanted to try and those, the majority who wanted only, as if it were, ringside seats at the event ready to applaud success, and condemn failure, but basically gripped by the drama of the occasion and the possibility of the wierd but novel spectacle of some adventurer hurtling over the edge into space to disappear into the infinity of the universe leaving the colookers awe stricken.

Whilst we are aware that it is not possible to fall off the earth, metaphorically at least, and at fairly frequent intervals, man has been going over the edge ever since, to find that the edge is in fact only another step on the way to increasing his total knowledge.

Over the edge and into the air, over the atomic edge, over the edge into space and ultimately perhaps over the edge into immortality.

Whether this is achievable or even acceptable may be debatable, but we seem firmly committed already to further exploration along this pathway and Heart Transplants are but milestones on the way.

Spare part surgery as it is called, now embraces such a wide range of various tissues including blood, skin, corneal grafts, kidney, liver and heart and even heart and lung transplants, a list much more suggestive of green fingers than of surgical gloves.

It is no secret that such procedures are far from being perfect for the human body has a marked reluctance to take unto itself any tissue which it considers foreign. This so called immune response is as yet not clearly understood, but it is actively and successfully used in vaccination procedures to protect individuals against such diseases as Smallpox, Tuberculosis, Tetanus, Diphtheria, Poliomyelitis, Cholera, Typhoid and others.

(4)

ANSWAL BERURT OF THE MEDICAL OFFICER OF HEALTH

To the Chairman and Members of the Health and Housing Committee.

In the first burst Meart Transplant.

A step into the unknown which held the rapt attention of the whole world

Any assault upon now frontlers has always attracted the attention of manida with about a macabire fescination reaching far back into history to the time when it was firmly believed that if man travelled far enough along the surface of the earth he would fall off the edge of the world.

None the less, then, as now there were those who wanted to try and those, the anjerity who manted only, as if it were, ringelds seats at the event ready to applaud success, and condemn failure, but basically gripped by the drama of the occasion and the possibility of the wherd but novel spectacle of some adventurer nurtiling over the edge into space to disappear into the infinity of the universe leaving the colockers awe atticken.

milet we are seen that it is not possible to fell off the earth, metaphorically at least, and at fairly frequent intervals, can has been pring over the edge ever since, to find that the edge is in fact only another step on the way to increasing his total knowledge.

Over the edge and into the sir, over the stomic edge, over the edge into space and citimately perhaps over the edge into importality.

Whother this is achievable or own acceptable may be debatable, but we seem firstly committed already to further exploration along this pathway and Heart Transplants are but milestones on the way.

Spare part surgery as it is called, now embraces such a wide range of verious tissues including blood, skin, octowell grafts, kidney, liver and beart and even heart and lung transplants, a list much more nuggestive of groon fingers than of surgical gloves.

It is no secret that much procedures are far from boing period for the human body has a marked rejuctance to take unto itself any tissue which it consistersing. This so called inmune response is as yet not clearly understood, but it is actively and successfully used in vaccination procedures to protect individual against such discases as Smallpox, Tumerculosis, Tetanus, Diphtharis, Policyclit

So the possibility exists that in endeavours to overcome the additional risks which the immune response brings to spare part surgery patients an answer will be forthcoming which could well bring simple healing to the whole range of complex immunological programmes which are undertaken largely by Local Health Authorities throughout the country.

A synthetic "vaccine" made in the laboratory which at one stroke can bring about immunity not only against the list of diseases mentioned above, but against the other main killer diseases, such as Heart and Arterial disease that bring about many of the situations in which spare part surgery offers a chance of prolonging life.

The wide publicity which is given to spare part surgery, and Heart

Transplants in particular, tends to obscure the fact that prevention is better
than cure.

This is the doctrine which is all too often forgotten and neglected not only by the community as a whole but also by too many doctors.

It is well for the National Health Service and its hospital service in particular that a record of achievement has been made and maintained in the control and conquest of disease far in advance of its time by the activities of the preventive branch of medicine, operating mainly through the outlets of Local Health Authorities such as this.

For indeed if the present National Health Service had to meet the impact of epidemics of the many diseases which were prevalent in the not too distant past in addition to the ever increasing present day demands upon it, there can be little doubt it would long ago have faced a crisis, besides which its present day tribulations would have paled into insignificance.

In such terms alone the relatively small sums spent in prevention have repaid themselves over and over again, saved the tax payer untold millions and continue to prop up a creaking health service to a degree which is seldom if ever acknowledged or indeed ever recognized.

What we have in fact is a sickness service which devours money in colossal gulps, much of it in an endeavour to satisfy appetite, in a disease orientated society for pills and potions the therapeutic value of which in a large proportion of cases is doubtful if not indeed suspect.

So the possibility exists that in endeavours to overcome the additional risks which the immune response brings to spare part surgery patients an answer will be forthcoming which could well bring simple healing to the whole range of complex immunological programmes which are undertaken largely by local Health Authorities throughout the country.

A synthetic "vaccine" made in the laboratory which at one stroke can bring about immunity not only against the list of diseases mentioned above, but against the other main killer diseases, such as Heart and Arterial disease that bring about many of the situations in which spare part surgery offers a chance of projonging life.

The wide publicity which is given to spare part surgery, and Heart
Transplants in particular, tends to obscure the fact that prevention is better
than cure.

This is the doctrine which is all too often forgotten and neglected not only by the community as a whole but also by too many doctors.

It is well for the National Health Service and its hospital service in particular that a record of schievenent has been made and maintained in the control and conquest of disease for in advance of its time by the activities of the preventive branch of medicine, operating mainly through the outlets of local Health Authorities such as this.

For indeed if the present National Health Service and to meet the impact
of epidemics of the many diseases which were prevalent in the net too distant
past in addition to the ever increasing present day demands upon it, there can
be little doubt it would long ago have faced a crisis, besides which its present
day tribulations would have paled into insignificance.

In such terms alone the relatively small sums spant in provention have report themselves over and over again, saved the tex payer untold militons and continue to prop up a creeking health service to a degree which is selden if ever acknowledged or indeed ever recognized.

What we have in fact is a sickness sarvice which devours money in colossal guips, much of it is an endeavour to exting appartite, in a disease orientated society for pills and potions the thorapoutic value of which in a large apportion of cases is doubtful if not indeed suspect.

A populace which is becoming increasing conditioned into believing and accepting, that it can't be in peak condition unless dosing itself with a multiplicity of concoctions of expensive sophisticated chemicals seems to indicate that the present structure of the National Health Service, including its very name encourages people to equate health with the consumption of costly potions.

There would appear to be a case for launching a massive and sustained Health Education programme, through the medium of television and along the lines adopted by the commercial advertisers. Clearly such an approach pays dividends to the commercial interests engaged in bringing their products to the notice of the public in this way. Similar dividends to the National Health Service and the community might result if the positive benefits of Health were exploited and even dramatised, in a like manner to the treatment which is given, the highly specialized and emotionally charged episodes in medicine or surgery which are concerned with the management of disease or pathology.

In the statistical tables which are to be found in this report, I would draw particular attention to the notifications of Measles in 1967 - a total of 187. It is to be confidently hoped, that after the introduction of Measles vaccine into the immunisation programme, 1967 will be the last year in which the figures for this disease will stand at so high a level. In future years the figure should show a steady decrease to vanishing point to join diphtheria eventually as somewhat of a medical curiosity.

I would also take this opportunity to thank the Chief Public Health
Inspector, Mr. Brogan, and his staff Mr. Plummer and Mr. Haskey, for their
active support and enthusiasm at all times. To Miss Forbes a special tribute
is due for taking on the complex work of the department and keeping the wheels
running smoothly from the beginning of her appointment.

To my deputy Dr. Haynes and the other Chief Officers of the Council and their respective staffs. I would express my thanks for their professional guidance willingly given through the year.

The valuable contribution of the Nursing Staff and Administrative Staff at the Child Welfare Clinic also deserves special acknowledgement.

To the Chairman and Members of the Health Committee and to all Members of the Council, I would express my appreciation for their interest and the sympathetic consideration given to all matters aimed at improving the general health standards and well being of the whole community.

A populace which is becoming increasing conditioned into bollowing and accepting, that it can't be in peak condition unless dosing itself with a multiplicity of conceptions of expensive sophisticated chemicals seems to indicate that the present structure of the Mational Health Service, including its very made ancourages people to equate health with the concumption of costly polions.

There would appear to be a case for issueding a massive and sustained the distributed by the programs, through the medium of television and along the lines adopted by the concercial advertisers. Clearly such an approach pays dividents to the consercial interests engaged in bringing their products to the notice of the public in this way. Similar dividends to the Matienal Health Service and the community might result if the positive benefits of Health ware exploited and even dramatised, in a like manner to the treatment which is given, the highly specialized and emotionally charged episodes in medicine or surgery which are concerned with the management of disease or pathology.

In the statistical tables which are to be found in this report, I would draw particular attention to the notifications of Massles in 1971. It is to be confidently hoped, that after the introduction of Massles vecting into the inventation programme, 1967 will be the last year in which the figures for this disease will stand at so high a level. In future years the stand show alsteady decrease to ventiching point to join diphthalis eventually as secondar of a radical curiosity.

I would also take this opportunity to thank the Chief Public Health
Inspector, Mr. Brogen, and his staff Mr. Pluraor and Mr. Heakey, for their
active support and enthusiase at all times. To Miss Forces a special tribute
is due for taking on the complex work of the department and keeping the whoels
running sacctaly from the beginning of her appointment.

To my deputy Dr. Thyras and the other Officers of the Council and their respective staffs. I would express my thanks for their professional guidance williamly given through the years

The valuable contribution of the Muraing Staff and Administrative Staff at the Child Walfare Clinic also describe special acknowledgements

To the Council, I would express my approxistion for their interest and the approximation for their interest and the approximation given to all matters sined at improving the general health standards and well being of the whole community.

HEALTH SERVICES PROVIDED BY THE COUNTY COUNCIL

Details of these services are provided for information by courtesy of the County Council.

Watnall Road Clinic

The County Health Clinic, Watnall Road, is utilised for Maternity and Child Welfare, School Clinic, Cervical Cytology, Dental Clinic, Relaxation Sessions, Speech training, Vaccination and Immunisation, Audiometry, Eye Testing, Distribution of Welfare Foods and District Home Help Service.

Ante-Natal and Post-Natal Sessions

Friday 1.30 p.m. until 4.00 p.m.

Medical Officer in attendance.

Child Welfare Sessions

Monday 2.00 p.m. until 4.30 p.m. Medical Officer in attendance - alternate sessions.

Thursday 2.00 p.m. until 4.30 p.m. Medical Officer in attendance - alternate sessions.

Health Visitors are in attendance at each Ante-Natal, Post Natal and Child Welfare Session.

Cervical Cytology Sessions

Alternate Tuesdays at 7.00 p.m.

School Clinic Sessions

Tuesday 9.30 a.m. until 12 noon.

Friday 9.30 a.m. until 12 noon. Medical Officer in attendance.

Dental Clinic Sessions .

Treatment is given by appointment only.

Vaccination and Immunisation

A vaccination and Immunisation session is held on alternate Monday mornings at 9.30 a.m. by appointment.

Distribution of Welfare Foods

Monday to Friday - 2.00 p.m. until 5.00 p.m.

The Fire Station, Watnall Road, Hucknall

A Child Welfare Session is held at the Fire Station, Watnall Road, Hucknall each Wednesday afternoon and a Medical Officer is in attendance on alternate sessions, between 2.00 p.m. to 4.30 p.m.

Midwifery Service

The services of the following County Midwives and District Nurse-Midwives are available in the Urban District.

Maternity Outfits

Sterilised maternity outfits containing all dressings necessary for the conduct of a domociliary confinement are supplied free of charge on the certification of the Midwife engaged or the Health Visitor.

Care of Premature Births

The provision of draught-proof cots with hot water bottles, blankets, etc., and an ambulance is made for all premature infants requiring transportation to hospital. The midwife accompanies the infant on the journey to hospital.

Similarly equipped cots are provided for such infants nursed at home.

The services of a Consultant Paediatrician are available when required.

Home Help Service

Home Helps are available where domestic help is required owing to the presence of any person who is ill, lying-in, an expectant mother, mentally ill, aged or a child not over compulsory school age. The charge for this service is 5s. 3d., per hour, but where the recipient is unable to afford this standard charge, the County Council's Scale of Assistance is applied.

At the end of the year, there was a total of seventy-two Home Helps employed on the joint district of Hucknall and Eastwood, forty-two of whom are available for service in Hucknall Urban District.

Cases in need of help should be reported to the District Office, County Health Clinic, Watnall Road, Hucknall (Telephone Hucknall 3596). It is particularly important that expectant mothers wishing to book a Home Help for their confinements should do so at an early date in order that adequate arrangements may be made.

REPORT OF THE

CHIEF PUBLIC HEALTH INSPECTOR AND CLEANSING SUPERINTENDENT FOR THE YEAR 1967

To the Chairman and Members of Hucknall Urban District Council, Mr. Chairman, ladies and gentlemen,

I have pleasure in presenting my report for 1967, a year in which Slum Clearance work was less than in previous years. This was due to the fact that fewer new houses were built to accommodate the tenants from our remaining Clearance areas. Individual houses at Claremont Avenue, Hayden Lane and Top Common were dealt with and there was a small amount of re-housing from areas declared the previous year in George Street and Quarry Street.

The survey of our first Smoke Control Area was completed early in the year. Conversions of all fireplaces were carried out during Summer and Autumn and the official order came into effect at the end of the year. The area comprised some 265 houses in the Salterford Road area of the Ruffs Estate, four County schools and Caretakers dwellings and seven private dwellings in the Misk area. A survey of the whole of the remainder of the Ruffs Estate was commenced at the end of the year.

Applications for improvement grants were received in respect of 74 premises and 71 of these were found to rank for grant. The owners of two houses in Florence Street were unable to carry out the necessary improvements and the Council purchased the dwellings and undertook the modernisation. More publicity is to be given in the future regarding the standard grant scheme and it is hoped that every home in the town will have modern bathroom facilities as soon as possible.

Controlled tipping continued on the Wigwam Lane site. This is the most economic means of disposal of refuse but with the increase in the pre-packaging of goods resulting in an ever increasing quantity of combustible rejects the question of incineration of refuse has always to be considered. The time may not be too distant when the milk bottle is replaced by a carton or plastic container which would certainly give rise to an enormous disposal problem for all Local Authorities. The Ministry of Housing and Local Government are desirous of a number of Local Authorities grouping where incineration is essential

SEPORT OF THE

CHIEF PUBLIC HEALTH DESCRICTOR AND CLEANED SUFFERINTENDED CHIEF PUBLIC CHIEF PUBLIC

To the Culture and Markers of Mackers I be the District Council,

I have planeurs in presenting my report for 1967, a year in which Size Clearance work was less than in previous years. This was due to the fact that feest new houses were well to accommodate the tenants from our remaining Clearance areas. Individual houses at Claremont Avenue, Hayden from and Top Cornec were dealt with and there was a small amount of re-housing from areas decisied the previous year in Guerge Street and Courty Street.

The survey of our first Smoke Control Area was completed early in the year. Convertions of all firsplaces were carried out during Surmer and Autumn and the official order came into effect at the end of the year. The area comprised some 265 houses in the Salteriers Road area of the Ruffs Hatate, four County schools and Caretakers dwellings and seven private dwellings in the Mask area. A survey of the whole of the remainder of the Ruffs Estate was commenced at the end of the year.

Applications for improvement grants were received in respect of 74 provises and 71 of these were found to rank for grant. The centre of two houses in Florence Street were unable to carry out the necessary improvements and the Council purchased the centry out the necessary improvements and the publicity is to be given in the future regarding the standard grant scheme and it is hoped that every hore in the team will have notern bathroom facilities as seen as possible.

Controlled tipping continued on the Migram Lane site. This has need economic means of disposal of raises but with the increase in the pre-packaging of goods resulting in an ever increasing quantity of conductible rejects the question of incineration of raises has always to be considered. The time may not be too distant when the milk bottle is replaced by a cutton or plantic container which would cartelinly give rise to an energous disposal problem for all local Authorities. The Ministry of Housing and Local Government are destrowed in local Authorities grouping where incineration is essential

and to this end discussions have taken place with various neighbouring Authorities.

Difficulties of storage of refuse at large shops and Supermarkets were eased by the introduction of bulk containers to replace the standard dustbins. A new vehicle delivered during the year was fitted with special bulk loading equipment to deal with the new containers. It is anticipated that the cinema, schools and other large establishments will gradually change to this new method of storage.

Considerable nuisance was caused for a week during Autumn when a local poultry farmer carried out manuring of his fields with hen manure which had been stocked during the Summer. The noxious smell pervading throughout the town gave rise to hundreds of complaints from residents. Discussions have taken place between the farmer and the local manufacturing chemists and experiments with the use of Potassium Permanganate which we hope will solve the problem, are to be carried out when manure stocking commences next year.

In conclusion, I would like to thank the staff for their loyal support throughout the year and the members of the Council for their continued interest in the work of the Department.

G. BROGAN

Chief Public Health Inspector.

and to this and discussions have taken place with various neighbouring

Difficulties of storage of refuse at large shape and Supermarkets were easied by the introduction of bulk containers to replace the standard ducthins. A new vehicle delivered during the year was fifted with special bulk loading equipment to deal with the new containers. It is enticipated that the cinema, schools and other large establishments will producily change to this new method of storage.

Considerable mideance was caused for a week during Autumn when a local poultry former carried out manufag of his fields with hen manufa which had been elected during the Surmer. The nowices small perveding throughout the team gave rise to hundreds of complaints from residents. Discussions have taken place between the former and the local manufacturing charlets and the specific with the use of Potassium is manufacturing charlets and the problem, are to be carried out when manufacturing consences next year.

throughout the year and the members of the Council for their continued interest in the work of the Department.
