County Borough

of Huddersfield

ANNUAL REPORT
OF THE
MEDICAL OFFICER OF HEALTH

JOHN M. GIBSON, B.A., M.D., D.P.H.

FOR THE YEAR 1948

MEDICAL OFFICER OF HEALTH.

December 1949.

Telephone Number: HUDDERSFIELD 3641-3.

TO THE CHAIRMAN AND MEMBERS OF THE HEALTH COMMITTEE:

LADIES AND GENTLEMEN:

I have the honour to present to you the Annual Report on the Health Services for the Borough for the Year 1940.

Judged from all the information available, it would appear that the general health of the citizens as a whole was comparatively good throughout the Year, and there were certainly no outbreaks of infectious disease worthy of comment.

A study of the vital statistics shows that four new records were established:-

(i) The death-rate from violence and accidents at 0.29 was the lowest ever recorded. The Public Health Staff can have played only a very minor part, if any, in this achievement, but the fall must be a source of great encouragement to those who in recent years have promoted so vigorously the "Safety First Campaign".

(ii) The death-rate from respiratory diseases was also the lowest ever recorded. Whilst Public Health measures played their part, the introduction and extended use of the sulphonamide drugs, and of penicillin, was undoubtedly an important factor concerned in this reduction.

(iii) From all the records available, it would appear that last year was the first in the history of the town when there were no deaths from diphtheria.

The highest death-rate in recent years was in 1933. Immunisation was introduced in 1933, and there has been an almost uninterrupted fall in the incidence of the disease and in its death-rate since that year.

(iv) The infantile mortality rate dropped to the very low figure of 33, which is the lowest ever recorded.

At the beginning of the present century, Huddersfield took a leading part in introducing measures to reduce the very high death-rate which then prevailed amongst young children, but not even the most optimistic of the Council's advisers at that time would have had the courage to suggest that in less than fifty years the mortality rate could be reduced to one quarter, or less, of the rate then obtaining.

Another gratifying feature of the Report is the fall recorded in the number of cases of venereal disease treated at the Clinic. Although this is not an absolute proof that the incidence of the disease has fallen, it can be regarded as such for all practical purposes, because the dangers associated with the disease, if untreated, are now so generally appreciated that practically all who become infected make use of the facilities available for treatment without delay. War has such a disturbing effect upon family life, particularly one of long duration, and conditions inevitably associated with it are so demoralising, that an increase in venereal disease as an aftermath of the recent War was anticipated. Fortunately, the increase was not excessively great locally, and last year's statistics suggest that the steady decline in the prevalence of the disease which was in evidence in pre-war days has now been resumed.

The War produced many other difficulties and problems which have not yet been surmounted, but without doubt the most urgent of these awaiting a solution is the housing shortage. 280 additional houses were erected during the year, but this is only a fraction of the number required. At the present time there are 4,591 names in the waiting list for Corporation houses, and this can be regarded as a "live" list, for it was revised comparatively recently. Nevertheless, a figure like this gives little idea of the urgency of the problem, for it conveys no conception of the misery and hardship suffered by many families. Moreover, owing to lack of suitable homes, there is much overcrowding, which lowers vitality and favours the spread of infection. Young married couples, many of them ex-service men and women, are the worst sufferers, and their marriages are often endangered, if not actually broken, through the lack of satisfactory housing accommodation. The use of a room at the home of the parents of either partner is never a satisfactory solution.

In view of this housing shortage, the Day Nurseries have been a boon to many families. The number in use remains at 5, representing 185 places, and the demand for these places is much greater than can be met by the accommodation available. Amongst the children who have to be refused acceptance there are, unfortunately, some who should be admitted in their own interests to safeguard their health, and, at the same time, enable their mothers to augment meagre family incomes. The provision of additional accommodation has now been approved. Details regarding this are given in the Report. The majority of Day Nurseries were opened as a War measure to enable women who were able and willing to give their services to help in the production drive. To a certain extent, that is still their function, for export is so vital to our economic recovery that production must be maintained at the highest level possible. One wonders, however, if it is quite fair to those mothers who have young children to ask them, or even to permit them, to undertake additional work at a period of their lives when their home duties are often so onerous and so important, whilst, at the same time, men are asking for their working days in the week to be reduced from six to five. It can be argued that the additional earnings of the mothers who undertake outside work are most beneficial to the family as a whole: also, in many cases where there is poverty young children are very much better cared for in Day Nurseries than they could be in their own homes. Nevertheless it must be realised that the up-keep of Nurseries is costly, both financially and economically - the actual cost is now approximately 40/- per place per week, and the total number of staff employed approximates 1 to every 3 children. Might it not be a better proposition, if powers existed to do so, to supplement the family

income in cases of poverty beyond the limits reached by the National Assistance Board, so as to enable mothers with young children to look after them and care for them adequately in their own homes? For the time being Nurseries are with us, and the demand for them is likely to remain for a considerable time. One very important thing can be said in their favour - the children who are admitted and who attend regularly are given a marvellous chance to develop into sturdy, well developed boys and girls.

The outstanding event of the year, affecting not only the Public Health Service, but also the whole system of medical practice throughout the country, was the introduction of the National Health Service Act, which came into operation on July 5th 1948. Broadly speaking, the purpose of the Act was to provide a complete scheme of medical treatment for all who require it, wherever and whenever treatment is needed, and to arrange that the cost of this should not fall upon the patient when ill or in need of such treatment, but should be paid for by the whole community, somewhat on the basis of an Insurance Policy. From the Public Health point of view, and, indeed, from the patient's point of view, such an arrangement is eminently desirable, and the scheme introduced is most comprehensive. It covers both medical and nursing treatment given in the patient's home, in the surgery, in hospital, or in a convalescent home; it deals with all the officially recognised types of treatment; it supplies all drugs and surgical appliances required; it makes provision for "after-care" in the form of home help, and assistance of various kinds, to be given not only to the convalescent but also to invalids, and to the handicapped of all classes. Such an enormous provision, embodying many radical changes, is bound to have its initial troubles, and, although the duties of Medical Officers of Health have been completely revolutionised, and, indeed, the responsibilities of Local Authorities drastically altered, it would be unfair to criticize unduly at such an early stage the difficulties that have arisen. Most of these difficulties have arisen from the changed setting of the medical services, rather than from the administration of individual services. For example, the division brought about by the Act between preventive medicine on the one hand, and clinical medicine on the other, is for the time being, obscuring the importance of the former, and giving the latter an unfair share of publicity. Clinicians have been given complete control of the medical policy advocated by Regional Boards, and they are fostering their own specialities, thinking mostly in terms of disease, and paying little attention to its prevention. Moreover, the new administrative machinery has quickly shown its weaknesses. Regional administration may sound wonderful in theory, but it is too unwieldy to be effective, too slow in action, too impersonal to take into account the feelings and wishes of patient and their relatives, too standardised in its methods to appreciate the value of local enterprise and experiment. Most of the specialist medical services which were in operation locally when the Act was passed are continuing for the present on exactly the same lines, and, generally speaking, the work is being performed by the same personnel. Clinics held in Local Authority premises continue as before, though payment for the services given by consultants at these Clinics has, in most cases, been accepted by the Regional Board. Methods relating to the admission of patients to local hospitals have had to be revised, for the doors of those institutions built by the Local Authority for Huddersfield residents only are now open to all in the locality who require hospital treatment, and there was already a scarcity of hospital beds in the area. It is unfortunate for many sufferers, whose names are now on the waiting lists, that the erection of the new hospital, for which plans had been approved, had not been completed, or even commenced, when the onset of War put an end to all building proposals. The additional accommodation it would have provided is now greatly needed, and, whatever alterations are carried out to existing buildings, this need will still remain. At the Princess Royal Maternity Home, although an extension of 25 beds, bringing the total to 57, was made in 1939, the demand for admission, even before July 5th, was exceeding the accommodation available. Now that non-borough residents and ratepayers of the Borough have an equal right to this accommodation, the medical and social needs of applicants for admission have to be considered, whilst the tendency to regard the institution as a Hospital, rather than as a Home, is likely to increase.

When dealing with tuberculosis, the pre-existing set up had much in its favour, for the area administered was such a size that the Clinical Tuberculosis Officer was able to take charge of the patients in the Sanatorium where he resided. He could examine all who attended, including contacts, at the Tuberculosis Clinic; he could carry out the necessary x-ray examinations, and he could follow up cases to their own homes. Although arrangements are proposed whereby an Officer of the Regional Board will devote a portion of his time (possibly 2/11ths) to the services of the Local Authority, in the provision of after-care, one fears now that the area has been widened, that it will not be possible for any one Medical Officer to keep in such close touch with patients and their contacts at all stages. It was this close contact in the past which helped to bring about such good results - both the incidence of tuberculosis and its mortality-rate have fallen very considerably in recent years. Included in the Report there is a Table of vital statistics which was collected by the Medical Officer of Health of Stockport, giving a comparison between the various County Boroughs of Lancashire and including the nearest County Boroughs of Yorkshire. This Table shows that the death-rate from tuberculosis in Huddersfield during the year was the lowest amongst those recorded.

Another change now proposed is the setting up of an Admission Bureau to deal with admissions throughout the extended area. Such a change, though perhaps inevitable, is viewed with misgiving locally, for it may mean that certain Borough patients will have to be treated in distant Sanatoria, thus increasing their feelings of isolation from home and relatives. In the same way, a suggestion made to use a portion of the Isolation Hospital for other purposes, and, if need be, to treat infectious cases arising in the Borough and surrounding districts in any accommodation available in other parts, may seem an administratively sound policy, but, if carried out, it will certainly increase the anxiety of parents at a time when they are already considerably worried at losing sight of their little ones.

As the Act makes provision for medical treatment for all, the need for District Medical Officers to attend those unable to pay for treatment disappeared on July 5th, and agreements with District Medical Officers were terminated accordingly: also, the need for Public Vaccinators disappeared, for compulsory powers relating to vaccination have now been abolished. Few, even of the strongest advocates of vaccination, were concerned about this change, for the "conscientious objection clause" in the Vaccination Acts had become so widely exercised that only about one-third of the children were being vaccinated in infancy. Unfortunately, the dropping of compulsory powers has given to the public the false impression that vaccination cannot now be regarded so essential, or so effective, as used to be the case. Our records for last year show that vaccinations dropped from 484 in the first six months of the year to 157 in the second six months - that is, to less than one-third of what was already a poor response.

A vigorous attempt is being made by the Maternity and Child Welfare staff to raise this percentage, but, owing to the absence of smallpox from the area for more than twenty years, it is difficult to make parents realise that in these days of air transport infection may quite easily be introduced at any time, and, the lower the mass immunity to the disease, the more likely is it to gain a wide distribution before drastic measures can be put into operation to limit its spread.

The response to diphtheria immunisation, on the other hand, although this has been a voluntary measure throughout, has been remarkably good, and at present approximately 74% of the children of the Borough have had this protection. In this case persuasion is easier, for parents have seen, or known, of severe cases of diphtheria, and they are anxious to protect their children from the ravages of the disease.

The most noticeable weakness of the Act would seem to be the division of responsibility for the sick and needy between three different Bodies - Executive Councils, Regional Boards, and Local Authorities - for this division creates barriers that no amount of goodwill can surmount completely. In the early stages the Minister of Health suggested that the Medical Officer of Health, in his official capacity, would act as the "bridge" between these three bodies, but experience has shown that the Medical Officer of Health's task in this direction, however conscientiously he may try, is beset with difficulties, and his help is not always welcomed. The word "bridge", according to the Dictionary, has two meanings:-

- (1) "a communicating link between two areas which would otherwise be completely isolated one from the other", and
- (2) "a structure fixed over an intervening space so that persons may make use of it to pass over from one side to the other".

No doubt the Minister had the first definition in mind when he used the word, but others, connected with Regional Boards, who seem to be accepting the latter definition, should remember that a "bridge" of any kind, unless it be made of steel or stone, is liable to break down when trodden upon too heavily.

In submitting the Report, I apologise for its late appearance, but this has been unavoidable owing to the many claims that have been made upon the time, not only of the Medical Officer of Health, but upon most of the staff of the Health Department. The transfer of the responsibilities of administering the hospitals to other officials has, for the time being, increased these claims, rather than diminished them. New Services have had to be organised, or extended, whilst the time spent upon Committee work has increased enormously. In addition, progress has been delayed owing to changes occurring in the staff through Officers of the Department being attracted to the recently Nationalised Services. I welcome this opportunity of expressing my indebtedness to those members of the staff who have remained at their posts, and shouldered greater loads of responsibilities.

To the members of those Committees intimately associated with the Public Health Services, and more particularly to their Chairmen, I wish, also, to express my thanks for their constant support and encouragement.

Yours faithfully,

John M. Gibson

COUNTY BOROUGH OF HUDDERSFIELD.

TUBERCULOSIS.

Clinical Tuberculosis Officer:	Thomas P. Twomey, M.B., Ch.D., D.P.H.
Tuberculosis Nurse:	Miss Catherine Vickers, S.R.N., T.A., (Member of the Royal College of Nursing).

VENEREAL DISEASES.

Venereal Diseases Officer:	Denton Guest, M.D.
Orderlies:	Frederick Reed. Clifford Speight.

GENERAL AND VITAL STATISTICS FOR THE YEAR 1948.
(Rates calculated on Registrar-General's Figures).

Situation of the Borough: Latitude varies from 53°36'28"N. to 53°41'40"N.
 Longitude varies from 1°43'26"W. to 1°53'36"W.

Elevation: Varies from 150 feet to 1,246 feet above sea level.

Area of the Borough: 14,149 acres.

Population: 1931 Census - 113,479.
 Estimated by the Registrar-General at the middle of 1948 - 127,400.

Density of Population: 1948 - 9.00 persons per acre.

Number of Inhabited Houses: 1931 - 31,650.

Number of Inhabited Houses (According to Rate Books): March 31st 1949 - 41,401.

Number of families or Separate Occupiers: 1931 Census - 32,109.

Rateable value of the Borough: 1st April 1948 - £992,003.

Sum represented by 1d. rate: £4,050.

	<u>Total.</u>	207

(Note: The details of water, milk and ice cream examinations referred to in Items 8, 9 and 10 are given in the "Sanitary Inspection of the Area" Section of this Report).

The Ambulance Station continues to be housed in the temporary premises at Leeds Road which were formerly used as a Sub-Fire Station during the last war period.

The Staff employed at the end of the year 1949, was 1 Ambulance Officer, 1 Deputy Ambulance Officer, 1 Mechanic, 1 Apprentice, 25 Drivers, 5 Porter Attendants and 1 Garage Hand.

3 new Ambulances, 1 second hand Ambulance and 1 second hand Sitting Case Car have been added to the Fleet during the year, whilst 2 old Ambulances have been disposed of, leaving the Fleet to consist of 3 Sitting Case Cars, 11 Ambulances, 2 Vans and 4 District Midwifery Cars.

The major repairs to vehicles continue to be dealt with at the Corporation Haulage Department, and the minor repairs and maintenance of both Ambulances and Midwifery Cars at the Ambulance Station.

The calls on the Service continue to grow. The number of cases removed and the total mileage for the Ambulance Service were more than twice those of the previous year.

Naturally the cost of the Service increased considerably and if this continues steps will have to be taken to curtail in some way the calls on the Service. There is undoubtedly abuse in its use by members of the public, but abuse is difficult to discover and check. In all cases a medical certificate of need is asked for and where abuse is suspected further investigation is carried out.

Consultation with the Hospital Management Committee has taken place in an attempt to insure all the economy possible in the demands made upon the Service, and to reduce waiting periods to a minimum.

HOME HELP SCHEME.

Home Help Organiser - Mrs. A.M. Webster - appointed 4th October 1948.

A Home Help Scheme to assist expectant and nursing mothers was first inaugurated in 1919 and in 1945 a Domestic Help Scheme was put into operation as a separate Scheme to give assistance in the home in cases of illness.

On the 5th July 1948, in accordance with the terms of Section 29 of the National Health Service Act, 1946, the 2 Schemes were combined into a single Home Help Service.

STAFF EMPLOYED.

At the beginning of July 1948 the following staff were employed:-

<u>(1) Home Helps.</u>		<u>(2) Daily Assistants.</u>	
(a) Full-time.	1	(a) Full-time.	
(b) Part-time.	5	(b) Part-time.	5

At the end of 1948 the number of Domestic Helps employed was:-

(a) Full-time.	5
(b) Part-time.	16

ASSISTANCE GIVEN.

Under the Maternity and Child welfare Scheme, inaugurated in 1919, the following assistance was given during the period from the end of December 1947 to the 3rd July 1948:-

<u>(1) Cases attended.</u>		<u>(2) Visits Paid.</u>	
(a) Home Helps.	69	(a) Home Helps.	537
(b) Daily Assistants.	105	(b) Daily Assistants.	511

During the same period under the Domestic Help Scheme the following work was carried out:-

(a) Cases attended.	36
(b) Visits paid.	1140

From the 5th July 1948 to the end of the year 1948 the following is the number of new cases attended. (in addition to those already being attended prior to the 5th July 1948).

Maternity and Child Welfare.	48
General Sickness.	42
Old Age.	12

TOTAL: 102

At the end of the year 1948 the following cases were receiving help.

Maternity and Child Welfare.	10
General Sickness.	22
Old Age.	18

50

MENTAL HEALTH. From the 5th July 1948 to the end of the Year 1948.

1. ADMINISTRATION.

(a) Constitution of Health (Mental Health) Sub-Committee. The Committee concerned with Mental Health is a Sub-Committee of the Health Committee. It is composed of 3 Aldermen and Councilors, with 2 co-opted members - 1 of the latter being the Medical Superintendent of the nearest Mental Hospital and the other a general medical practitioner nominated by the Huddersfield Executive Council.

Meetings are called by the Chairman when it is considered that there is sufficient business to transact.

(b) Number and Qualifications of Staff employed in the Mental Health Service. 1 Duty Authorised Officer is employed, full-time, for the Mental Health Service. He was formerly employed as a Welfare Officer on the staff of the Education Authority. He holds no special qualifications, but attended a special course of instruction in mental health work prior to taking over the duties of Duty Authorised Officer.

A Psychiatric Social Worker has been appointed to visit female patients and assist in the work generally, but she cannot take up duty until November 1st 1949. She has been doing similar work as a part visitor on the staff of a mental hospital in another locality.

So far, the opening of an "Occupation Centre" has not been possible, but a suitable building has been obtained for this purpose and the plans dealing with alterations have been approved.

The Child Guidance Clinic under the auspices of the Education Authority is functioning satisfactorily. It is staffed by a Psychiatrist, who gives 3 sessions per week, and a Psychologist, giving full-time service.

(c) Co-ordination with Regional Hospital Boards and Hospital Management Committees. The Medical Officer of Health is a member of the Local Hospital Management Committee, and of the Liaison Committee of Medical Officers of Health in the area of the Leeds Regional Hospital Board. The supervision of patients on trial or on licence from mental hospitals or institutions for mental defectives is carried out partly by an Alderman from the nearest Mental Hospital and partly by the local Authority staff. The arrangements in operation at present is that an Alderman from the Mental Hospital supervises patients for the first month after discharge.

Appointments are also made for patients to be seen at the Huddersfield Royal Infirmary, where a Medical Officer from the Mental Hospital in the area has a weekly session.

(d) Arrangements have not been initiated for the training of Mental Health workers, but as stated above, the Duty Authorised Officer attended a special course of instruction in Mental Health work prior to taking up his duties.

(e) Arrangements have not been initiated for the training of Mental Health workers, but as stated above, the Duty Authorised Officer attended a special course of instruction in Mental Health work prior to taking up his duties.

MATERNITY AND CHILD WELFARE.

Marjorie Haynes, M.D., B.Sc.,
Senior Assistant Medical Officer of Health.

Birth Rate.

The Birth Rate for 1948 was 16.92. This shows a marked decrease from the previous year, which was 20.68.

Infant Mortality Rate.

The Infant Mortality Rate was 53. This is the lowest figure ever recorded in the Borough. The decrease coincides with a similar fall throughout the country as a whole.

The total number of infant deaths was 72. In the age group from 1 to 4 weeks the total number of deaths was 48 - a large proportion of these children died from prematurity (23) and a further 14 infants died from congenital defects and atelectasis. There was a welcome decrease in the deaths from infectious diseases. One death from diarrhoea and three from respiratory infections are recorded.

In the age group 1 month to 4 years, 24 deaths occurred. There were 6 deaths from diarrhoea and 8 from respiratory infections.

Four deaths from asphyxia are reported. Three of these were caused by inhalation of vomit and one from overlying. A distressing feature is that one of these deaths might have been prevented if more care had been taken in the preparation and giving of the feeds.

Maternal Mortality.

The Maternal Mortality Rate rose slightly from 1.14 in 1947 to 1.34 in 1948.

Three deaths occurred. Two of the cases were due to septicaemia following abortion - one of these patients received medical care and the second had concealed her pregnancy. The third case died as the result of severe haemorrhage previous to and during labour. She received skilled medical care and died in hospital.

Diphtheria Immunisation.

The total number of children under 5 immunised during the year was 1661. 606 were immunised by the Public Health Department staff.

72% of children under the age of 5 are now immunised

There were no deaths from diphtheria. One non-immunised child suffered from the disease.

Vaccination.

From July 5th 1946 vaccination, when desired, was undertaken by the Public Health Department staff. From this date until the end of the year 60 vaccinations were carried out by the staff out of a total of 128 infants vaccinated during that period.

The response to the vaccination campaign has, so far, been very disappointing. The public fail to realise that if vaccination is carried out under the age of 6 months, the reaction is negligible.

Home Visiting.

There were many changes of staff during 1948 but the routine domiciliary visiting was kept up by the medical staff, with the assistance of nurses.

The overcrowding problem remains and the majority of young couples live with their families after marriage. In many cases this leads to inharmonious relationships which react upon the children.

Many more mothers appear to be going out to work, in order to supplement the family income and many take in work to do at home. Consequently a large number of children are looked after by relations and friends as the accommodation in the Nurseries is full to capacity.

RODERSFIELD DISTRICT MIDWIFERY SERVICE.

Sister in Charge: Miss A. Carroll, S.R.N., S.C.M.

STAFF: (a) Resident: 1 Sister in Charge.

1 Sister.
9 Pupil Midwives.

(b) Non-Resident: 1 District Midwife.
(c) Domestic Staff: 1 Cook,
1 Domestic Worker.

This Department is recognised as a Part II Training School by the Central Midwives Board. During the year 13 pupils commenced their Part II Training. 3 of these passed their examination in 1948 and 7 of them in 1949.

The number of cases dealt with showed a marked decrease, being only 396 compared with 515 during 1947. There was a decrease in the number of stillbirths, there being 7 during 1948 compared with 10 during 1947. Among the 396 cases attended by the Midwives there were no cases of Puerperal Pyrexia, and no Maternal Deaths. 4 infant deaths occurred.

The following is a tabular statement of the work carried out throughout the year:-

DAY NURSERIES.

The building of a new Nursery at Hilsbridge foreshadowed in last year's Annual Report was commenced during the year and completed in February 1949. This Nursery provides "baby", "tweenie" and toddler" accommodation for a total of 40 children.

The Health Committee have during the year reviewed the position in regard to Day Nurseries and have decided on building two new Nurseries, one at Leeds Road (to replace the hired premises in Canker Lane) and one at Carr Pit, Holdgreen. They have also provisionally reserved sites at Longroyd Bridge and Lindley should further development be necessary. Southgate and Greenhead Nurseries are to be extended at a later date in order to provide accommodation for an increased number of children. Both at the new Nurseries and at Greenhead and Southgate extensions advantage will be taken of the opportunity to incorporate such improvements as experience has suggested advisable, i.e. drying rooms, toy stores, bed stores, better heating arrangements, etc.

The accommodation to be provided at Carr Pit and Leeds Road will be for a total of 60 children at each Nursery, whilst at Greenhead and Southgate the total in each case will be eventually 50 children.

TUBERCULOSIS.

T.P. Twomey, M.D., Ch.D., D.P.H., D.M.R.E.,
Clinical Tuberculosis Officer.

NOTIFICATIONS.

The total notifications during the year were 100 and of these 69 were pulmonary and 31 non-pulmonary. It is gratifying to be able to report that again during the past year there was no case of bone and joint tuberculosis notified among children.

DEATHS.

The number of deaths from all forms of tuberculosis was 40 as compared with 46 of the previous year; a decrease of 6. Of this total 22 occurred in one or other of our institutions and 1 case died at Rinderfields Hospital, Wakefield.

PUBLIC HEALTH (PREVENTION OF TUBERCULOSIS) REGULATIONS, 1925.

No occasion arose during the year when it was considered necessary to enforce these regulations.

PUBLIC HEALTH (TUBERCULOSIS) REGULATIONS, 1940.

Information was sent to the Minister of Labour and National Service respecting 8 patients who are on the Tuberculosis Register on Form T.147. This was in compliance with the Public Health (Tuberculosis) Regulations, 1940, which state that Form T.147 must be sent to the Minister of Labour and National Service when a patient of military age is suffering from Tuberculosis.

TUBERCULOSIS CLINIC.

Two afternoon and one evening sessions per week were held as in the previous year, with attendance by appointment so far as possible for both old and new cases. The attendances throughout the year were very satisfactory, the total attendances numbering 1712. Two patients received a course of tuberculin injections at the Clinic. Out-Patients receiving artificial pneumothorax treatment attend for their refills at the Bradley Wood Sanatorium and the total attendances by out-patients at the Sanatorium for examination or treatment were 1355.

NEW PATIENTS.

391 new cases were examined and of these 90 were considered to be tuberculous and 301 non-tuberculous. Diagnosis was again based on medical history, together with clinical, radiological and bacteriological findings, and 23 Tuberculin Tests were carried out in children.

CONTACTS.

The total number of contacts to cases of pulmonary tuberculosis examined during the year was 110 and 73 contacts were X-rayed. As in former years children and adolescents who have been exposed to much infection have been kept under continued supervision over a period of a year or more. Of these contacts one was found to be tuberculous.

LABORATORY EXAMINATIONS.

These totalled 518 examinations of specimens of sputum from the Tuberculosis Clinic, Bradley Wood Sanatorium and Mill Hill Hospital. A small number of specimens of urine and blood were also examined.

DOMICILIARY VISITS.

The Clinical Tuberculosis Officer paid 61 home visits to patients during the year, mostly to suspected new cases unable to attend the Clinic. The Tuberculosis Nurse paid 1646 visits during the year. As previously her duties have included instructions to the relatives regarding precautionary measures which should be taken while there is a case of Tuberculosis in the house, advising how best to use the available sleeping accommodation, encouraging relatives to present themselves for examination as contacts and rounding up absentees. She also made 96 attendances at the Ultra-Violet Light Clinic.

CLINIC REGISTER.

At the year end the number of cases on the Register was 493, an increase of 24 as compared with last year. Of this number 334 were pulmonary cases and of these 150 or 47% had a positive sputum.

BRADLEY WOOD SANATORIUM (BEDS AVAILABLE 75).

The cases admitted to the Sanatorium have been, where possible, those offering reasonable hope of improvement. Advanced and chronic cases requiring institutional treatment have been admitted to the Tuberculosis Wards at Mill Hill Hospital. These Wards have, however, had to be

used also for the temporary care of a number of patients who have been awaiting a vacancy in the Sanatorium. The position in respect of beds in the Sanatorium has not improved and throughout the year there has been an ever-increasing waiting list of patients requiring Sanatorium treatment. The average waiting period has now extended to about 4 months. As was explained in last year's report, this demand for beds does not indicate an increase in the disease, but is due rather to the reduced turnover rate resulting from the extension of the average length of stay in the Sanatorium, which has followed the advance in modern methods of treatment. A much higher percentage of cases are "quiescent" at discharge as against being merely "improved" and the number of cases relapsing following discharge and requiring re-admission has fallen considerably. Admissions to the Sanatorium numbered 68, an increase of 6 compared with last year. No major alterations have been carried out during the year.

X-RAY EXAMINATIONS.

During the year 1023 X-ray examinations and 1950 screen examinations were made. This number included the follow-up of 17 cases referred to the Department after X-ray by the Mass Radiography Unit. A new fluorescent screen was fitted to the screening stand, but no other alterations were made to the existing plant. In addition to the above, 8 patients were referred to Killingbeck Sanatorium, Leeds, for Tomograph examinations.

ARTIFICIAL PNEUMOTHORAX.

In selected cases, treatment by artificial pneumothorax continues to prove highly beneficial and during the year 11 cases were considered suitable. Of these 10 were successfully induced, but in one case the treatment had quickly to be abandoned owing to a rapidly spreading flare up in the contralateral lung, and in another case abandonment was advised following thoracoscopy when it was found that apical adhesions were too dense for division. Altogether 36 cases received treatment during the year, including 2 bilateral cases, the refills for the year totalling 914. Of these cases 31 were still under treatment at the year end. In addition, 1 patient received 29 refills for her pneumo-peritoneum. This patient - a rather advanced case with bilateral disease and cavitation, which terminated fatally - did not respond to treatment and the pneumo-peritoneum was abandoned.

THORACIC SURGERY.

The Consulting Thoracic Surgeon, Mr. P.K. Allison, F.R.C.S., has continued to visit the Sanatorium at intervals for consultation with the Clinical Tuberculosis Officer, and selected cases, requiring collapse therapy other than artificial pneumothorax, have been transferred to Pinderfields Hospital for operation. In addition, a number of patients receiving pneumothorax treatment have been transferred for thoracoscopy and division of adhesions in order to improve lung relaxation. Operations performed during the year were as follows:-

- 3 Thoracoplasties.
- 4 Phrenic Crushes.
- 7 Adhesiotomies.

STREPTOMYCIN.

One patient, an old thoracic case with a persisting positive sputum due to bronchial ulceration, received a course of Streptomycin. Although a prolonged course of this drug was given, the bronchial ulceration persisted and the sputum remained positive for Tuberculosis.

ORTHOPAEDIC CASES.

Conservative methods of treatment by immobilisation have continued to be employed and these cases have been under the direction of Mr. Barclay, F.R.C.S., the Consultant Orthopaedic Surgeon. The decline in bone and joint tuberculosis in children has been most satisfactory in recent years and no case of this type of disease was admitted to the Sanatorium during the year. The following plasters were made:-

- Spinal shells - 6
- Hip Spicas - 3

MINISTRY OF HEALTH - MEMORANDUM 266/T, APRIL 1943.
(Tuberculosis Maintenance Allowances).

The following is a report on the working of the Tuberculosis Maintenance Allowance Scheme for the period 1st January to the 4th July 1948, when, owing to the introduction of the National Health Service Act, 1946, the Tuberculosis Maintenance Allowance Scheme ceased.

The necessary investigations of applications for allowances were made by the Tuberculosis Visitor and submitted to the Chief Tuberculosis Officer for authorisation of payment.

Payment was made by means of a weekly cheque, posted to the person authorised to receive the allowance, to be cashed at the Borough Treasurer's Rents Department.

Maintenance Allowances commenced during the period under review: 16 - { 12 males.
4 females.

Of the 12 males -

9 were men with dependants.
3 were men with no dependants.

Of the 4 females -

All were without dependants.

The number of the patients referred to above who ceased working and accepted Sanatorium treatment was - 14

The number who ceased working and remained under supervision at the Tuberculosis Clinic was - 2

16

The position of these cases at the 4th July 1940 was as follows:

Still in the Bradley Wood Sanatorium.	6
Still in the Mill Hill Hospital.	-
On the waiting list for the Bradley Wood Sanatorium.	2
Attending the Tuberculosis Clinic.	2
Attending the Bradley Wood Sanatorium as out-patients.	2
Left the district.	1
Number who died during the year.	3

VENEREAL DISEASES TREATMENT SCHEME.

Denton Guest, M.D.,
Medical Officer in charge of the Venereal Diseases Treatment Centre.

The year under review shows once more a progressive fall in the incidence of all types of Venereal Disease.

During the year 71 new cases of Syphilis were seen, compared with 81 cases in 1947; there was one case of Soft Sore, 97 cases of Gonorrhoea and 150 cases of Non-venereal disease, comparing with figures of 2 cases of Soft Sore, 129 cases of Gonorrhoea and 172 cases of Non-venereal disease in 1947.

The result has been a further fall in total attendances at the clinic to 6646, compared with 8189 in 1947. Of the total attendances 5102 received the individual attention of the Medical Officer and 1544 received Intermediate Treatments from the Nurses and Orderlies.

The number of cases treated by Penicillin shows a fall to 205 cases, and I am glad to report that a new preparation, Procaine Penicillin, brought into use during the year, has now replaced Oil and Beeswax penicillin and is giving equally good results with much less pain and discomfort to the patient.

The new cases seen for the first time during the year are as follows:-

Syphilis (recently acquired).	45
" (congenital cases).	4
" (old standing cases).	22
Gonorrhoea (recent).	95
" (Old standing).	2

I am glad to be able to report that once more not one single case of Syphilis of recent origin failed to attend until at least one full course of treatment had been given, and so the defaulter problem appears to be reasonably satisfactory.

In all, 6 cases of Primary Syphilis, 4 cases of secondary Syphilis, 2 cases of Syphilis latent in the 1st year of infection, and 1 congenital case ceased to attend before the completion of treatment.

Pathological examinations made during the year by the Medical Officer were as follows:-

Dark Ground Illumination.	27
Smears for Gonorrhoea.	518

There were also large numbers of specimens examined for Trichomonas in the female.

Complications to treatment have been almost conspicuous by their absence which is no doubt due to the lower dosage of Arsenical Compounds used and their replacement by Penicillin.

I again wish to record my thanks to the Sister, Orderlies and Nurses for their work during the year, also my thanks to the staff of the Huddersfield Royal Infirmary for their co-operation and help, and finally to the Medical Officer of Health, who has always been eager to help in all ways possible.

In conclusion, may I add that as it seems likely that my services in this department may soon prove redundant under the New Health Service, I would like to place on record my thanks to all who have served on the staff and my good wishes to my successor.

VENEREAL DISEASES SERVICES RENDERED AT THE HUDDERSFIELD TREATMENT CENTRE,

AND IN HOSPITAL DURING THE YEAR 1948.

The following Table shows the services rendered at the Treatment Centre and in Hospital during the period under review, classified according to the area in which the patients resided:-

<u>Name of County Borough or County to which patients in treated ordinarily reside.</u>	<u>HUDDERSFIELD</u>	<u>West Riding.</u>	<u>Army.</u>	<u>Navy.</u>	<u>Bradford.</u>	<u>Dewsbury.</u>	<u>Halifax.</u>	<u>Manchester.</u>	<u>Oldham.</u>	<u>TOTAL.</u>
<u>Number of cases dealt with at Treatment Centre for the first time.</u>	196	114	4	-	-	1	2	1	1	319
<u>TOTAL ATTENDANCES.</u>	4447	2135	20	1	4	13	13	14	1	6648

SANITARY CIRCUMSTANCES OF THE AREA.WATER SUPPLY:J.P. Deveridge, M.Inst.C.E., M.Inst.W.E., Waterworks Engineer and Manager.

The consumption of water during the year is shown in the following figures:-

For Domestic Purposes	28.06 gallons per head per day.
For Trade Purposes	17.32 gallons per head per day.
Total	<u>45.38</u> gallons per head per day.

The figures show a decrease of .71 gallons per head per day in Domestic supply, and a decrease of .37 gallons per head per day in Trade supply on the consumption returns for 1947.

During the year 683 yards of 3" mains were renewed, and 13,586 yards have been reconditioned by the "Eric" process. This reconditioning process has dealt effectively with coloured water complaints, and at the same time has increased the carrying capacity of the mains.

During the year 1,063 yards of new 4" mains were laid to Corporation Estates within the Borough, and 4,424 yards of new mains were laid to other houses within the area of supply.

Chemical examination of all waters are carried out every quarter and the following table shows the results obtained.

RESULTS EXPRESSED IN PARTS PER 100,000.

Date.	Free Chlorine.	Reaction pH.	Chlorine in Chlorides.	Nitrogen in Nitrates.	Free Ammonia.	Albuminoid Ammonia.	Oxygen absorbed in 4 hours.	Permanent Hardness.	Temporary Hardness.	Total Hardness.
1948.										
January 26.	-	8.3	1.30	0.028	0.042	0.008	.092	3.25	1.25	4.50
April 5.	0.10	8.6	1.4	-	0.0010	0.0010	0.0400	2.2	1.6	3.8
July 19.	0.2	8.6	1.3	-	0.0040	0.0032	0.0020	2.6	1.0	3.6

All supplies are controlled by bacteriological examination and samples were taken from consumers' taps weekly.

Bacteriological samples	314
Pres: B. Coli absent in 100 ml.	306
Pres: B. Coli 1 per 100 ml.	4
Pres: B. Coli 2 per 100 ml.	3
Pres: B. Coli 3 per 100 ml.	1

All samples were highly satisfactory.

97.5% contained no B. Coli and complied with the Ministry of Health Classification No. 1

No. 2. 1.2% contained 1 B. Coli per 100 ml. and complied with the Ministry of Health Classification

No. 2. 1.0% contained 2 B. Coli per 100 ml. and complied with the Ministry of Health Classification

No. 2. 0.3% contained 3 B. Coli per 100 ml. and complied with the Ministry of Health Classification

43 of the above samples were taken in conjunction with the Health Department.

A short interruption in sampling was caused by a fire at the Blackmoorfoot Laboratory. Sampling was speedily recommenced with the assistance of the Medical Officer of Health who provided temporary supplies of media.

SEWERAGE:T.F. Cliffe, A.R.I.C.S., M.I.Struct.E., Borough Engineer and Surveyor.

Relief of Flooding: 15" and 12" dia. Sewer, Ings Road, Almondbury.
Storm Overflow, Leeds Road, at Cinderfield Dyke.

Sewer Enlargement: for housing site development.

Storm overflow and 30" dia. to 21" dia. sewer, Penistone Road to Thorpe Lane (in progress).
Armitage Road, Milnsbridge.
12" dia. Sewer from Market Street to point at Longwood Brook.

STREET SCAVENGING:

This has received constant attention and there is nothing exceptional to report.

SEWAGE DISPOSAL:H.H. Goldthorpe, Des.Sc., A.R.I.C., M.I.S.P., Sewage Works Manager.Sewage Treatment.

Plans for a comprehensive scheme of sewage treatment to be carried out in stages were placed before the Ministry of Health in March 1948, together with application for loan sanction for Stage I amounting to £465,000.

Stage I of the Comprehensive Scheme consists mainly of plans for the enlargement of the chemical sedimentation tanks and for the construction of a sludge treatment plant on a new site at Bradley. Three types of sludge, namely, textile and domestic, chemical, and biological, are to be dealt with after conditioning with varying reagents in a large common press house.

The inquiry for loan sanction of Stage I was held on October 7th 1948 and was approved in principle and recommendations were made to advance sections of subsequent stages dealing with biological purification in order to give the earliest possible improvement to the final effluent. Agreement as to the method of carrying out the modified programme is pending.

The new and enlarged pipeline from Messrs. L.D. Holliday & Co., Ltd., works was completed in August 1948, and discharges into the works through a flume recorder in corrosion resisting tiles.

The formation of four acres of underdrained sludge lagoons begun in July 1948 on the island site at Colnebridge is nearing completion. These lagoons are to receive the biological sludges until the new sludge treatment plant is completed.

Consequent upon the wartime demands on the local chemical industry and the present increase in volume of chemical sewage every effort is being made by co-operation with the chemical traders to reduce the present difficulties of treatment. The overwhelming amount of trade waste compared to the volume of domestic sewage does restrict biological activity and slows down the rate of purification, making the time required to achieve a satisfactory effluent extremely long.

The shortage of fats for soap making has been favourable for the introduction of soap substitute (synthetic detergents) both in the home and in industry. As cleansing agents these substitutes do their job very well indeed, but the dispersed and emulsified matters arriving at the sewage works are not as easily coagulated. A greater load is being carried through the sedimentation tanks to the biological processes. The effect of synthetic detergents on purification processes is of great concern to those in charge of sewage works and their apprehensions have been expressed to makers and users. Lacking long term practical experience with such new compounds the effect of synthetic detergents is still controversial.

PUBLIC CLEANSING:W. Pitchforth, Cleansing and Haulage Superintendent.

The scheme for the conversion of tub closets and slop-water closets to the water carriage system, commenced in the year 1925, still operates. Under it, a grant of £10 is paid for the conversion of such closets. Five conversions (one tub-closet and four slop-water closets) have been done during the year.

The following table shows the progress made during the last five years and the number of closets, etc. of various types in use at the close of each year:-

	1944.	1945.	1946.	1947.	1948.
Number of clean water closets, (including trough closets).	45,415	45,505	45,977	46,449	47,446
Number of waste water (slop) closets.	106	106	105	104	100
Number of tub closets.	493	409	459	449	442
Number of tubs in use.	507*	503*	473*	461*	455*
Number of ashpits in use.	12	12	12	9	9
Number of ashbins in use.	45,417	45,448	45,613	45,871	46,253
Number of existing privy middens.	140	141	137	134	123

*This figure includes 76 which have been issued in place of privy middens where water or sewers are not available, and also 217 which were issued to new areas.

Salvage activities in respect of paper, scrap metal, textiles, kitchen waste and bottles were carried on throughout the year.

From the 1,089 receptacles in use, 1,686 tons of waste food was sold for processing for feeding to pigs and poultry.

Paper sales amounted to 867 tons. Special trailers are being constructed and it is hoped that by using these in conjunction with the new Karrier C.K.3 refuse collecting vehicles a larger amount of waste paper will be collected separately.

The department is still very short of staff for refuse collection, and E.V.W. labour is being employed to alleviate the deficiency and improve the collection frequency.

Particulars of the work performed during the year are as follows:-

Weight of refuse collected.	29,104 tons.
Number of cesspools emptied.	10
Refuse incinerated.	9,739 tons.
Number of dustbins in use.	46,253
Dustbins collected.	1,072,332
Privy middens emptied.	

The steam supply from the Destructor Works to the Electricity Department ceased on 25th March. As a result the destructor throughput of refuse was very considerably reduced and a much larger amount was tipped under control at Fieldhouse Tip. It is intended to provide additional playing fields by this method of refuse disposal.

The results obtained at the Destructor are as follows:-

Actual steam raised.	6,427,000 lbs.
Average superheat.	595°F.
Total weight of clinker.	2,994 tons.
Total weight of dust.	1,597 tons.
Total weight of metal.	200 tons.

The amount of refuse tipped at Fieldhouse was 16,895 tons.

Cleansing of Cesspools.

There are 21 cesspools in the Borough; of these 9 are emptied by the staff of the Cleansing Department, 6 are emptied by the owners, and at the remaining 6 the contents are allowed to overflow over the adjacent fields. For emptying the cesspools use is made of the gully emptier.

PUBLIC BATHS IN THE BOROUGH.

A.M. Toalster, M.N.A.B.S., Superintendent of Baths.

Cambridge Road Baths.

A modern building; the equipment includes two swimming pools, twenty-three slipper baths, with a medical baths department containing foam baths, etc. and artificial sunlight apparatus. The water used in the swimming pools is constantly pumped through a filtration plant and its chlorine content is maintained at the generally accepted standard.

Ramsden Street Baths.

One swimming pool, which is used during school hours by the Education Committee for the teaching of swimming to schoolchildren. After school hours the bath is open to the public. Here also there is an up-to-date filtration and chlorination plant in use.

New Street, Milnsbridge.

This bath is used by schoolchildren and Youth Organisations. It has no filtration plant, but is kept at a fairly satisfactory standard of cleanliness by frequent refilling with clean water.

SANITARY INSPECTION OF THE AREA.

Dennis Drake, H.R.San.I., M.S.I.A., F.R.C.O., Chief Sanitary Inspector.

Details of the work carried out by the Chief Sanitary Inspector and his staff are contained in the following tabular statements:-

General Summary.

Number of cases of Infectious Diseases notified.	1362
do. removed to Hospital.	285
do. premises disinfected.	379
do. flushed.	48
do. visited searching for infection.	395
do. revisits where cases are isolated at home.	97
do. houses visited for Zymotic or other particulars.	359
Total number of visits to infected houses.	1230
Number of articles disinfected.	1140
Number of visits by Removal Officer for all purposes.	930
Number of premises flushed by request of owners (paid for).	564
Other premises, yards or courts flushed.	467
Drains found choked by Flushers.	1050
Drains made clear.	933
Inspections for Housing Defects.	912
do. revisits.	1783
Nuisances reported to Public Health Department.	752
do. inspected.	752
Inspection of premises where nuisances are found.	948
do. where no nuisances are found.	3047
do. premises where offensive trades are conducted.	36
do. of Restaurant Kitchens.	53
do. of premises under Food and Drugs Act, 1936.	371
do. Houses let in lodgings.	199
do. Common Lodging Houses.	33
do. Factories (Mechanical).	353
do. Factories (Non-Mechanical).	111
do. Work Places.	198
do. Bakehouses.	370
do. Schools.	159
do. Slaughter Houses.	768
do. Canal Boats.	45
do. Dairies and Milkshops.	246
do. Cowsheds.	1088
do. Markets and Shops.	675
do. Under Merchandise Marks Acts.	173
do. of Van Dwellings.	279
do. under Rats and Mice (Destruction) Act, 1919.	4051
Re-visits to work in progress.	1173
Visits to property under notice.	6454
Total number of Inspections of Premises.	20830
No. of Entries in Report Book.	875
Preliminary Notices to Owners.	443
Number of Legal Notices issued for abatement or abolition of Nuisances.	255
Owners seen personally.	689
Summonses taken out.	1
Sections of new drains tested.	55
Old drains tested.	317
do. and found sound.	149
do. and found defective.	168
Smoke observations taken.	959
Number of visits under Food and Drugs Acts.	708
Food and Drugs - samples purchased.	469
do. samples adulterated.	19
Water samples taken for analysis.	3
Number of visits under Fertilizers and Feeding Stuffs Acts.	52
do. samples procured.	81
do. samples found adulterated.	6
do. under Rag Flock Act.	13
do. samples taken.	3
Milk samples for Bacteriological Examination.	630
Water samples do. do.	68
Ice Cream do. do.	207

Summary of Defects:

Drains requiring re-construction.	24
Drains connecting with main sewer.	3
Drains not efficiently trapped.	1
Drains requiring ventilation shafts.	11
Defective sink pipes and drains.	209
Defective ventilation shafts.	13
Defective yard drains.	149
Defective sewers.	13
Defective cellar drains.	29
Defective sinks.	2
Defective eave and fall pipes.	126

Summary of Defects (Continued).

Defective roofing.	122
do. windows, including sash cords.	11
do. urinals.	8
do. tub closets.	1
do. water closets.	272
do. pipes.	1
do. doors or door frames or thresholds.	10
do. woodwork or plaster round sinks.	6
do. floors.	30
do. plaster.	111
do. wall pointing or rendering.	8
do. balustrade.	1
Waste pipes requiring disconnecting.	3
Fall pipes requiring disconnecting.	15
To provide Eave and Fall Pipes.	2
do. sinks in houses.	14
do. sinks in shops.	1
Nuisances from want of drains.	2
do. choked sewers.	7
do. water in cellar.	13
do. water in washkitchen.	1
do. cess pools.	2
do. street gullies.	13
do. defective surface of yard.	14
do. smoke.	25
do. poultry, pigeons and animals.	3
Shops requiring means of heating.	1
do. washing accommodation.	9
Offensive accumulations.	14
Factories Closet accommodation insufficient.	2
do. do. unsuitable or defective.	8
Factories (Non-Mechanical) requiring cleansing.	4
Closets requiring linewashing.	16
Old privies requiring alteration to tub or w.c. system.	4
Old tiplars requiring alteration to tub or w.c. system.	4
Tub closets requiring conversion to w.c. system.	1
Insufficient closet accommodation.	13
Houses requiring cleansing.	19
do. verminous.	2
do. requiring ventilation.	48
do. damp.	95
do. requiring water supply.	3
do. insufficient water supply.	8
Cowsheds requiring reconstruction.	4
do. lighting.	2
do. ventilation.	2
New cowsheds.	2
Dairies requiring cleansing.	1
New dairies.	1
Food Premises requiring linewashing or cleansing.	11
do. ventilation.	2
do. do. defective floor or walls.	2
Polluted wells closed.	2
TOTAL:	1564

Premises and Occupations which can be controlled by By-Laws and Regulations.1. Houses Let in Lodgings:

This class of house is subject to inspection and registration under regulations contained in the Huddersfield Improvement Act, 1871.

The short tabular statement given below shows the number of houses let in lodgings on the register:-

Houses let in lodgings on register January 1st 1940.	55
Houses removed from register during the year 1940.	5
Houses added to register during the year 1940.	26
Net increase to register during the year.	21
Houses remaining on register on December 31st 1940.	76
Number of visits made during the year.	199

Summary of defects found and remedied.

Defective rainwater pipes.	5
do. ventilation shaft to drain.	1
do. wash basin.	1
do. sink waste pipes.	4
do. roof.	2
do. W.C.	1
do. drain.	1
do. wall plaster.	5

Summary of defects found and remedied. (Continued).

Defective ceiling plaster.	3
do. windows.	5
Choked drains.	3
do. waste pipes.	4
Rooms cleaned.	9
Cellars cleaned.	1
Stairs and landing cleaned.	5
Additional ventilation.	2
Houses disinfested.	4

TOTAL: 56

2. Offensive Trades.

The number of premises on the register of Offensive Trades is 0, in which the following trades are carried on:-

Soap boiling.	1
Tripe boiling.	5
Fat melting.	6
Bone boiling.	1
Gut scraping.	2
Number of inspections during the year.	36

The whole of the premises are kept in compliance with the Dye-Laws and no contravention was discovered during the year.

THE FACTORIES ACT, 1937.1. Inspections: (including inspections made by Sanitary Inspectors).

Premises.	Number of		
	Inspections.	Written Notices.	Prosecutions.
Factories with mechanical power.	353	24	-
Factories without mechanical power.	401	4	-

4. Registered Non-Mechanical Factories.

On the Register (S.8) at the end of the year:-

Clothing and similar trades.	41
Leather.	16
Iron and Tin.	21
Wood.	20
Lead and Paint.	23
Jewellery.	4
Bakehouses.	130
Miscellaneous Trades and Manufactures.	32
Total number of Non-Mechanical Factories on the Register.	<u>287</u>

5. Other Matters.

Matters notified to H.M. Inspector of Factories:-

Failure to affix Abstract of the Factory Act, 1937 (S. 44). -

Action taken in matters referred by H.M. Inspector.

Notified by Inspector.	12
Reports (of action taken) sent to H.M. Inspector.	12

Underground Bakehouses (S.54).

Certificates granted during the year.	-
In use at the end of the year.	1

PUBLIC HEALTH ACT, 1936. SECTIONS 249-250.CANAL BOATS.HUDDESFIELD REGISTRATION DISTRICT.

1. The number of boats inspected during 1940 was 10, and of inspections 44. The 10 boats were made up of fly boats, being all broad fly boats. The places of registry in 9 cases was Goolle, and in 1 case Wakefield. All the boats inspected were found in good condition and conforming to the Act and Regulations, and the occupants of all the boats were in good health.

2. Infringement of the Act and Regulations with respect to the following matters:-

(a) Registration.	None.
(b) Notification of change of master.	None.
(c) Masters without Certificates.	None.
(d) Marking.	None.
(e) Overcrowding.	None.
(f) Separation of sexes.	None required.
(g) Cleanliness.	None.
(h) Ventilation.	Nothing to complain about.
(i) Painting.	None.
(j) Provision of Water Casks.	All boats provided.
(k) Removal of bilge water.	This work received regular attention.
(l) Notification of Infectious Diseases.	None.
(m) Admittance of Inspectors.	No difficulty experienced.

(3) Legal proceedings taken.	None.
(4) Any other steps taken to secure compliance with the Act and Regulations.	None.
(5) Infectious Diseases.	None.
(6) Detention of Boats.	None.
(7) (a) Number of boats on the Register.	Ten.
(b) Number of boats in use or available.	Ten.
(c) Number propelled by motor.	One.
(d) Number of boats that cannot be traced.	None.
(8) Number registered during 1948.	None.

Summary appendix to the Annual Report of the Canal Boats Inspector for the year 1948.

ERADICATION OF BED BUGS.

Number of Council houses found to be infested.	23
Number of Council houses disinfested.	32
Number of other houses found to be infested.	20
Number of houses treated by a Contractor with liquid H.C.N. Gas (a) Privately owned.	9*
(b) Council houses.	20*

* This figure includes the houses adjoining the bug infested houses.

9 Council houses have been treated with liquid insecticide and D.D.T. and/or Gammaxane, and all is now reported to be free from bugs. 20 privately owned houses have been similarly treated, 17 are reported to be free from bugs, and the remaining houses are still under observation.

1026 inspections for general cleanliness and vermin have been made of Council houses. Of these, 152 were revisits to houses previously found to be unsatisfactory.

1084 inspections have been made of private houses, the occupants of which had applied for Council houses. 20 of these were found to be bug infested. Of these 20, 5 were granted Council houses, and on removal, the furniture was fumigated by liquid H.C.N. Gas in the Council's removal van and the beddings passed through the steam disinfectant.

All the privately owned houses found on inspection to be bug infested have been dealt with under the Public Health Act, 1936.

As an additional precaution 124 visits have been paid to dealers in second-hand furniture and clothing, and to furniture removers in an effort to prevent the distribution by these channels. No evidence of vermin was found during these visits.

HOUSING.Houses erected by the Corporation since 1914.

1914 to 1944.	5349
1945.	8 (prefabricated Arcon type).
1946.	242 (permanent).
1947.	59 (including 12 "Esiform permanent prefabricated).
1948.	282 (including 148 "Esiform" permanent prefabricated).

Houses in course of erection.	267 (including 144 "Esiform" permanent prefabricated).
-------------------------------	--

Housing Conditions - Statistics - Year ended 31st December 1948.

1. Estimated Population.	127400
2. General Death Rate.	13.23
3. Death Rate from Tuberculosis.	0.31
4. Infantile Mortality.	33
5. Number of dwelling houses of all classes.	42406
6. Number of working class dwelling houses.	35954
7. Number of new working class houses erected.	288

Number of New Houses erected during the year.

1. By the Local Authority.	282
2. By other bodies and persons.	6

1. Inspection of dwelling houses during the year.

(a) (i) Total number of dwelling houses inspected for housing defects (under Public Health or Housing Acts).	912
(ii) Number of inspections made for the purpose.	912
(iii) Number of revisits.	1783
(b) (i) Number of dwelling houses (included under sub-head (a) above), which were inspected and recorded under the Housing Consolidated Regulations 1925 and 1932.	2
(ii) Number of inspections made for the purpose.	2
(c) Number of dwelling houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation.	2
(d) Number of dwelling houses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation.	399

2. Remedy of defects during the year without service of formal notices.

Number of dwelling houses rendered fit in consequence of informal action by the Local Authority or their Officers:-	
Number of dwelling houses in respect of which defects were remedied.	210

3. Action under Statutory Powers during the year.

A. Proceedings under Sections 9, 10 and 16 of the Housing Act, 1936.

(i) Number of dwelling houses in respect of which notices were served requiring repairs.	Nil.
(ii) Number of dwelling houses in which defects were remedied after service of formal notices.	
(a) by owners.	Nil.
(b) by Local Authority in default of owners.	Nil.

B. Proceedings under Public Health Acts.

(i) Number of dwelling houses in respect of which notices were served requiring defects to be remedied.	181
(ii) Number of dwelling houses in respect of which defects were remedied after service of formal notices.	
(a) by owners.	170
(b) by Local Authority in default of owners.	1

C. Proceedings under Sections 11 and 13 of the Housing Act, 1936.

(i) Number of dwelling houses in respect of which demolition orders were made.	Nil.
(ii) Number of dwelling houses demolished in pursuance of Demolition Orders.	3

D. Proceedings under Section 12 of the Housing Act, 1936.

(i) Number of separate tenements or underground rooms in respect of which Closing Orders were made.	2
(ii) Number of separate tenements or underground rooms in respect of which Closing Orders were determined, the tenement or room having been rendered fit.	Nil.

4. Housing Act, 1936, Part IV - Overcrowding.

(a) (i) Number of dwelling houses known to be overcrowded at the end of the year.	165
(ii) Number of families dwelling therein.	223
(iii) Number of persons dwelling therein.	943
(b) Number of new cases of overcrowding reported or discovered during the year.	37
(c) (i) Number of cases of overcrowding relieved during the year.	82
(ii) Number of persons concerned in such cases.	494

Progress of Slum Clearance Programme - Clearance Areas.

No further action has been taken during the year.

Legal Proceedings.

Under the Public Health Act, 1936.

<u>Date.</u>	<u>Offence charged.</u>	<u>Name of Defendant.</u>	<u>Result.</u>
25th August 1948.	Failing to comply with notice under Section 93, Public Health Act, 1936.	A.M.L.	Order made for work to be put in hand within 6 weeks. Work done.

Emergency Housing for persons inadequately housed.Dwelling Units in Camps.

The three Army Camps at Altonbury, Bradloy Road and Salondine Nook gunsites have been taken over by the Corporation and the huts have been reconstructed and fitted out as dwellings. 29 dwelling units are completed and 6 are still under reconstruction.

Properties subject to Clearance or Demolition Orders.

69 dwelling houses, which had been condemned, have been requisitioned and emergency repairs carried out. These houses are still below the present day standard of fitness, but they provide shelter and a home as a temporary measure for families who had been living under most unsatisfactory conditions until better accommodation becomes available.

Fertilisers and Feeding Stuffs Act, 1926.

70 samples of Fertilisers and 11 samples of Feeding Stuffs were taken informally during 1948.

The following is a detailed list of the commodities sampled:-

Fertilisers.

Sulphate of Ammonia.	10
Superphosphate of Lime.	8
Nitrate of Soda.	3
Muriate of Potash.	2
Sangral.	5
Bone Meal.	9
General Fertiliser.	3
Martin's Prize Fertiliser.	5
Tomato Fertiliser.	5
Dried Blood.	5
National Growmore.	1
Tomorite.	1
Basic Slag.	1
One Week Fertiliser.	1
Blood and Fish Meal.	1
Hop Manure.	2
Limax.	1
Sulphate of Potash.	1
I.T.P. Tomcrop.	2
Liquinure.	1
Fish Grain.	1
Solutone.	1
I.T.P. Velvitone.	1

TOTAL: 70

Feeding Stuffs.

Barley Meal.	1
Miller's Offal.	1
Indian Meal.	2
Palm Kernel Cake.	2
National Poultry Food.	1
National Pig Meal.	2
National Cattle Cubes.	1
Sussex Ground Oats.	1

TOTAL: 11

The following is a statement of deficiencies and irregularities found in the samples taken:-

No.	Nature of sample.	Declared contents.	Result of analysis.	Remarks.
2.	Superphosphate of Lime.	Phosphoric Acid Soluble in water. 18.5%	Phosphoric Acid Soluble in Water. 17.6%	Proportion of Soluble Phosphoric Acid below the declared amount. Stock withdrawn.
18.	Tomato Fertiliser.	Nitrogen. 5.0% Phosphoric Acid Soluble in water. 10.0% Potash. 10.0%	Nitrogen. 5.5% Phosphoric Acid Soluble in water. 6.4% Potash. 10.5%	Proportion of Soluble Phosphoric Acid below the declared amount. Stock withdrawn.
32.	Tomorite.	Nitrogen. 4.5% Phosphoric Acid Soluble in water. 5.0% Insoluble in water. 1.25% Total. 6.25% Potash. 8.0%	Nitrogen. 3.9% Phosphoric Acid Soluble in water. 5.9% Insoluble in water. 0.7% Total. 6.6% Potash. 8.0%	Nitrogen result below the declared value by more than permitted variation. Stock withdrawn.
60.	I.T.P. Tomcrop Base.	Nitrogen. 5.25% Phosphoric Acid Soluble in water. 2.25% Insoluble in water. 6.50% Potash. 9.0%	Nitrogen. 5.1% Phosphoric Acid Soluble in water. 1.2% Insoluble in water. 7.3% Total. 8.5% Potash. 8.6%	Deficiency of Soluble Phosphoric Acid outside the limit of variation. Stock withdrawn.
60A.	Tomcrop Top Dressing.	Nitrogen. 6.0% Phosphoric Acid Soluble in water. 5.0% Insoluble in water. 5.0% Potash. 7.0%	Nitrogen. 6.1% Phosphoric Acid Soluble in Water. 3.1% Insoluble in water. 7.1% Total. 10.2% Potash. 7.5%	Deficiency of Soluble Phosphoric Acid outside the limit of variation. Stock withdrawn.
71.	Bees Tomato Fertiliser.	Nitrogen. 4.5% Phosphoric Acid Soluble in water. 5.0% Total. 6.25% Potash. 8.0%	Nitrogen. 3.7% Phosphoric Acid Soluble in water. 5.9% Total. 7.7% Potash. 9.3%	Nitrogen content below declared value by more than permitted variation - Manufacturers warned. Stock withdrawn.

SCHOOLS.

During the year the Chief Sanitary Inspector and his staff carried out a complete survey of the Sanitary and Washing Accommodation in all schools. A report was submitted to the Education Committee, showing how the accommodation compared with the standards set out in S.R. & O., 1945, No. 345.

RAG FLOCK ACTS, 1911 AND 1926.

2 premises were found to be dealing with Rag Flocks. 13 visits were made in ascertaining this. 3 samples were taken, which proved to be satisfactory.

RATS AND MICE DESTRUCTION.

The problem of surface infestation is being assiduously dealt with by three full-time Rodent Operatives proceeding in accordance with the technique specified by the Ministry of Agriculture and Fisheries, to whom the duties were transferred in September 1947 from the Ministry of Food. A system of servicing is available and this is applied as required by Circular N.S.19 (Ministry of Agriculture and Fisheries). In cases where drains are suspected of being the cause of rodent infestation, tests are applied and all cases of defective drains are dealt with under the Public Health Act.

The following is a summary of action taken during the year:-

Rats.

Complaints Received.		No. with evidence of Infestation.	No. with no evidence.
Business Premises.	Private Dwellings.		
81	104	151	54

Visits made.	Estimated No. of Rats destroyed.	No. of Premises treated.	No. of Premises cleared.
3040	2394	318	27

No. of Drains Tested.	No. of Drains found Defective.
120	67

Mice.

Complaints Received.		No. with evidence.	Treatments carried out.	No. of visits made.	No. of Premises cleared.
Business Premises.	Private Dwellings.				
16	70	86	140	1011	40

The treatment of sewers is carried out by the Borough Engineer's Department.

INSPECTION OF BEER CELLARS.

Periodical inspections have been made during the year. All the defects found on the previous inspections have been remedied and there is nothing untoward to report.

MILK SUPPLY.

On the 31st December 1946, there were 105 registered farms in the Borough, comprising 210 sheds in which were housed approximately 1800 dairy cows.

During the year frequent visits have been made to the farms, during which sheds have been inspected on 1080 occasions. Of these visits 84 visits were made in investigating the cause of unsatisfactory milk samples.

Number of Registered Farms.	105
do. Cowkeepers.	98
do. Wholesale Producers.	28
do. Retail Producers.	62
do. Producers producing both wholesale and retail.	8

<u>Vendors of Milk.</u>	<u>In Borough.</u>	<u>Coming into Borough.</u>	<u>TOTAL.</u>
Retail Producers.	69	31	100
Retailers only.	33	10	43
Milkshops (including 134 shops where bottled milk only is sold).	146	-	146

Licences issued under the Milk (Special Designations) Regulations, 1936 to 1946.

Description of Licence.	Number in force 31st December, 1946.
<u>To use the designation "Tuberculin Tested".</u>	
To produce, bottle and sell.	9
To sell by retail, including supplementary licences.	40
Bottling establishments.	2
<u>To use the designation "Accredited".</u>	
To produce, bottle and sell.	7
To produce, but not bottle.	20
To sell by retail, including supplementary licences.	1
<u>To use the designation "Pasteurised".</u>	
Pasteuriser's Licences.	2
To sell by retail, including supplementary licences.	20

There are two licences in force authorising the use of the special designation "Pasteurised". In both these dairies milk is processed by the "High Temperature, Short Time" method. There is a well equipped laboratory at each dairy in which samples of both untreated and treated milk are frequently examined.

Approximately 6,000 gallons of milk are pasteurised daily. This figure includes approximately 200 gallons of "Tuberculin Tested" milk. In addition, approximately 520 gallons of milk already processed are delivered daily to one of the dairies for distribution to milk retailers. Of the above quantity some 4,200 gallons are sold in bottles as "Pasteurised" Milk.

The sale and consumption both of "Tuberculin Tested" milk and of "Pasteurised" milk has again increased during the year.

The public demand for "Tuberculin Tested" milk is increasing steadily and there is no doubt its consumption would be even greater if larger supplies were available.

Milk supplied to Schools.

All the schools in the Borough, under the jurisdiction of the Education Committee, with the exception of one, are supplied with "Pasteurised" milk from out of the Borough. Twenty-four samples of this milk have been examined and all the samples satisfied the prescribed tests. Six samples of the raw milk supplied to the one school have been examined and three of those samples were found to be below the standard prescribed by the Medical Officer of Health.

BACTERIOLOGICAL EXAMINATION OF MILK.

130	4	3.08

THE MANUFACTURE AND SALE OF ICE CREAM.

Number of premises registered for the manufacture and for the sale of Ice Cream.

29

Number of premises registered for the sale of Ice Cream.

104

Although there is no legal standard relating to the purity of Ice Cream, it is felt that it should at least reach the standard required for good quality of milk and where on examination it is found that the sample falls below the standard fixed originally for Grade A milk, the position is explained to the purveyor concerned and the sample classified as unsatisfactory. When a result of this kind is reported the methods employed are investigated and the co-operation of the trader is invariably obtained.

DACTERIOLOGICAL EXAMINATION OF ICE CREAM.(Produced in the Borough).

No. of samples.	No. satisfactory.	Percent-age.	UNSATISFACTORY.

The percentage of satisfactory samples is lower than in 1947 for Ice Cream produced in the Borough, but higher for Ice Cream produced outside the Borough. Most of the latter were produced by firms of national dimension.

FOOD INSPECTION:(a) MEAT INSPECTION.

The Public Abattoir continues to be used as a centre for slaughter under the Meat and Livestock Control Order, 1940. Ten private slaughterhouses still remain unused. The only private slaughterhouse now licensed is used for the slaughter of horses.

The carcasses of all animals slaughtered for human consumption are inspected (during the hours of slaughter) at the slaughter house prior to removal.

The following table shows the number of animals slaughtered, the number and percentages found diseased or unsound:-

	Cattle (ex Cows).	Cows.	Calves.	Sheep.	Pigs.
Number killed.	5556	1557	5793	22521	3067
Number inspected.	5556	1557	5793	22521	3067
<u>ALL DISEASES EXCEPT TUBERCULOSIS</u>					
Whole carcasses condemned.	5	31	31	64	10
Carcasses of which some part or organ was condemned.	2276	824	6	2689	12
Percentage of the number killed affected with disease other than Tuberculosis.	39.28	54.05	0.638	12.22	0.566
<u>TUBERCULOSIS ONLY.</u>					
Whole carcasses condemned.	19	101	5	-	21
Percentage whole carcasses.	0.34	6.41	0.08	-	0.54
Carcasses of which some part or organ was condemned.	544	606	-	-	136
Percentage of the number killed affected with Tuberculosis.	10.13	44.76	0.086	-	4.05

TUBERCULOSIS ORDER, 1930.

Number of cows slaughtered.	11
Number wholly condemned.	8
Number partly condemned.	-
Number where offals only condemned.	3
Slaughter of carcasses condemned.	3255 lbs.
The total weights of condemned meat and offals are as follows:-	
Beef.	74904 lbs.
Mutton.	2455 lbs.
Pork.	6250 lbs.
Veal.	1156 lbs.
Offals.	82330 lbs.
	<u>167191 lbs.</u>

Slaughter of Horses for Human Consumption.

507 horses were slaughtered during the year for human consumption and all were examined by the Meat Inspectors. 3 carcasses and organs were found unfit for human consumption and were dealt with accordingly.

Tuberculosis in Calves.

5 Calves were found to be affected with Tuberculosis during the year. Each case was notified to the Ministry of Agriculture and Fisheries. In 1 case the mother of the calf was located and slaughtered under the Tuberculosis Order, 1930, and was found to be affected with advanced Tuberculosis.

Other foods found unsound or unwholesome:-

Tinned goods.	4637	Cakes.	102
Fish.	3095 lbs.	Beans.	20 lbs.
Shrimps.	104 lbs.	Drawn.	40 lbs.
Butter.	25 lbs.	Black Pudding.	11½ lbs.
Pickles.	140 jars.	Han.	4 lbs.
Sausage.	32 lbs.	Mussels.	440 lbs.
Flour.	502 lbs.	Sweets.	32 lbs.
Pies.	97	Gravy Salt.	20 pkts.
Fish Cakes.	235	Soup.	244 pkts.
Cheese.	19 lbs.	Pudding Mixture.	250 pkts.
Eggs.	703	Cooking Compound.	3 lbs.
Dried Fruit.	320 lbs.	Dried Peas.	70 lbs.
Plums.	533 lbs.	Cereals.	208 lbs.
Chickens.	264 lbs.	Bread.	200 lbs.
Fruit.	70 jars.	Cauliflowers.	2½ tons.
Blackberries.	54 lbs.		

Food found to be unwholesome in its present state and salvaged by the Ministry of Food Salvage Officer:-

Evaporated Milk.	108 tins.
Butter.	25 lbs.

(b) FOOD AND DRUGS ACT, 1938.

Report on action taken under the above named Act in
the County Borough of Huddersfield during the year 1940.

Food Examination.

The chemical examination of food is carried out in the Laboratory of the Public Analyst and the Bacteriological examination in the Public Health Department or at the Bacteriological Department of the Royal Infirmary, depending on the nature of the examination required.

2. DETAILS OF SAMPLES REPORTED BY THE PUBLIC ANALYST TO BE ADULTERATED.

No.	Article.	Result of Analysis.	Proceedings.
5	New Milk.	Adulterated by abstraction of at least 3% fatty solids.	Vendor warned by Town Clerk.
37	New Milk.	Adulterated by abstraction of 4.6% fatty solids.	Vendor warned by Town Clerk.
49	New Milk.	Adulterated by abstraction of 33.00% fatty solids.	Case heard 22nd April 1940. Fined £5.0.0. and £1.11.6. costs.
50	New Milk.	Adulterated by 4.2% of extraneous water, and further abstraction of 4.1% fatty solids.	Vendor warned by Town Clerk.
60	New Milk.	Adulterated by at least 7.8% of extraneous water.	Case heard 26th April 1940. Case dismissed because of irregularity in connection with the service of the summons.
73	New Milk.	Adulterated by abstraction of 7% fatty solids.	Vendor warned by Town Clerk.
78	New Milk.	Adulterated by abstraction of 4% fatty solids.	Vendor warned by Town Clerk.
86	New Milk.	Adulterated by at least 1.1% of extraneous water.	Vendor warned by Town Clerk.
30	Black Currant Puree. (Informal).	Proportion of Ascorbic Acid is less than the declared value.	Referred to Ministry of Food by Town Clerk.
130	New Milk.	Adulterated by abstraction of 10.6% fatty solids.	Vendor warned by Town Clerk.
150	New Milk.	Adulterated by abstraction of 10% fatty solids.	Vendor warned by Town Clerk.
155	New Milk.	Adulterated by abstraction of 4% fatty solids.	Vendor warned by Town Clerk.
183	New Milk.	Adulterated by abstraction of 10.6% fatty solids.	Vendor warned by Town Clerk.
193	Sterilised Milk.	Adulterated by abstraction of 28.3% fatty solids.	Case heard 4th October 1940. Producer fined £5. Vendor ordered to pay costs.
214	New Milk.	Adulterated by abstraction of 9.3% fatty solids.	Vendor warned by Town Clerk.
78	Gelatine. (Informal).	Unsatisfactory on account of excessive Zinc.	Suppliers warned by Town Clerk.
121	Beef Sausage. (Informal).	Deficient in Meat.	Reported by Town Clerk to Ministry of Food for action.
148	Potted Meat. (Informal).	Sample contained cereal and should be sold as potted meat paste.	In hands of Town Clerk for consideration.
149	Potted Meat. (Informal).	Sample contained cereal filler and should be sold as potted meat paste.	In hands of Town Clerk for consideration.

3. OFFENCES OTHER THAN ADULTERATION.

None.

4. LEGAL PROCEEDINGS.

Date.	No. of Sample..	Offence Charged.	Name of Defendant.	Result.
<u>1948.</u>				
22nd April.	49	Selling New Milk from which 33.0% fatty solids had been abstracted.	A.D.	Fined £5.0.0. and £1.11.6. costs.
26th April.	60	Selling New Milk to which had been added 7.8% of water.	E.S.	Case dismissed because of irregularity in connection with the service of the summons.
4th October.	193	Selling Sterilised Milk from which 20.3% fatty solids had been abstracted.	S.V.D. Co.Ltd. C.H.C.S.	Fined £5.0.0. Ordered to pay costs.
