To the Chairman and Members of the District Council of Brentwood

Mr. Chairman, Ladies and Gentlemen,

Dr. James Gorman, Medical Officer of Health to the Brentwood Urban District Council, retired on the 31st May, 1973, and was not replaced because of the pending reorganisation of Local Government.

With the kind assistance of Dr. T.D. Blott, the following statistical report for 1973 in respect of the Brentwood Urban District Council has been prepared by the staff of the new Environmental Health Department of the Brentwood District Council, to whom thanks are due, and is respectfully submitted.

OTHER ORGANISATIONS and SERVICES

Brentwood Tuberculosis and Chest Care Association:

(oror)

The following report has been received from the Hon: Secretary of this Association - Mrs. Theresa Clark - for which my thanks are due :-

"The Brentwood Tuberculosis and Chest Care Association continued to give benefit during 1973 to those people living in the Brentwood area who were suffering from various illnesses of the chest and who were in need of help. Generally, the assistance took the form of extra nourishment and in some cases, fuel.

Although it is stated that Social Services Departments are aiming to take over all forms of assistance, it is clear that they are still lacking in both expediency and sufficiency. In fact, the Association had received an official request from the Social Services Department for money to help pay a fuel bill incurred by a person under their care.

The Association had been able to meet its bills during the year with the help of Brentwood Urban District Council, who had very kindly made a generous donation to the funds. The rest of the money had been raised by the efforts of the Committee and friends.

It is recognised that the Association now faces additional problems brought about by inflation coupled with a considerably larger area to cover after changes in the boundaries following the recent Local Government Re-organisation. However, it is hoped that the Association will be able to continue to quietly "fill in the gaps" left by the Social Services in the care of people (often elderly) suffering from various chest illnesses."

BRENTWOOD HOME SAFETY COMMITTEE

Hon: Secretary's Report for 1973

First I would mention the changes which have taken place during the year in the membership of this Committee. Due to illness and other commitments there were a few resignations, but these places have been filled by new members as follows:-

Brentwood Evening Townswomen's Guild Business & Professional Womens' Club County Health Visitors Head Teachers' Association W.V.S. and W.I. Youth Organisations - Cubs Resigned: New Member:

Mrs. Hack Mrs. R. Evans
Mrs.Hayward Mrs. B. Horner
Miss Bennett Mrs. D. Cambage
Mrs.L.P.Smith Mr. C. Steynor
Mrs. P.Cross Mrs. M. Russell
Mrs. P.Cross Mrs. J. Reed

We were also very pleased to welcome Mrs. E. Voisey and Mrs. J. Welsh from the County Social Services Department.

Our existing members represent the Electricity and Gas Boards, County Ambulance Service, County Fire Brigade H.Q., Hospital Services and Thermos. Miss E.M.Clark, Senior Nursing Officer, now represents the Soroptimist Club of Brentwood, Basildon and Billericay and I represent the Environmental Health Department of the District Council of Brentwood.

The Annual Home Safety Week was held from the 21st to 26th May, 1973. This was in conjunction with other Home Safety Committees in Essex. We had special features in the Brentwood Gazette and The Argus newspapers at a cost of £50.00, and several local Schools took part in the Poster/Painting Competition. The Judges of the Competition were :-

Alderman Mrs. J.M. Roulston - The Worshipful Mayor of Chelmsford; Miss Barbara Naish - Head of the Home Safety Division at RoSPA; Mr. Peter Jowett - Mid-Essex Technical College and School of Art.

Prizes were awarded to two children attending Pilgrims Hatch Infants' School, two children attending St. Thomas' Infants' School and one child attending Hutton Village County Primary School. This was very good considering there had been a great number of entries from schools throughout Essex. At the prize giving ceremony held at the Civic Theatre in Chelmsford over 100 parents attended, together with their children.

We continued to display posters on the UP and DOWN platforms at Shenfield and Brentwood Stations, a different poster for each month of the year. Posters were also purchased for distribution amongst schools and clinics. During the Home Safety Week special posters were given to the Brentwood Rotary Club and the Brentwood Chamber of Trade to encourage tradesmen to display them in their shop windows.

10,000 Home Safety serviettes were purchased for children attending the local Infant/Primary schools and for the old folk to be used at their Christmas parties. For many years we have distributed these serviettes and they are often requested long before Christmas and much appreciated. For the older children and others 8,000 Home Safety pocket calendars are purchased each year.

A Home Safety Conference was held at the Council Offices on March 1st. A large number of representatives from local organisations attended this meeting by special invitation. There was a varied programme with an Exhibition organised by the Essex County Fire Brigade H.Q.

Our very grateful thanks are due to the Brentwood Council for their continued financial support and to the Essex County Council for their grant towards the work of this Committee.

Evelyn P. Turff. Hon: Secretary

WATER SUPPLY

I have received the following report from the Chief Engineer of the Essex Water Company :-

- (a) 1. The water supply of the whole of the area has been satisfactory in quality and quantity.
 - 2. No action has been necessary in respect of any form of contamination.
 - 3. The number of dwelling houses supplied as at 31st December, 1973, was 19,413, and the population as at 30th June, 1973, as obtained from the Registrar General, was 58,690. We are unable to state the number of houses supplied by standpipe, but the total is quite insignificant.
 - 4. We do not make frequent fluorine determinations but on the basis of past results, the fluorine content of the supplies is put at 0.25p.p.m.
- (b) 1. Bacteriological and Chemical examinations are made of the raw water, of the water in its various stages of treatment and the water going into supply. A total exceeding 10,000 chemical, bacteriological and biological examinations have been made and all water going into supply was wholesome. In addition, samples were examined for radioactivity. Analyses have also been made of samples obtained from consumers taps in the various parts of the Company's district, including that of your Council, and all proved to be satisfactory.
 - 2. The water is not plumbo-solvent.

LAUNDRY SERVICE FOR THE INCONTINENT

Under the provisions of the Public Health Act, 1936, Section 84, this free service is provided for those patients who are incontinent, and whose linen is unsuitable for sending to a commercial laundry.

The service is carried out twice weekly on Monday and Thursday mornings. Each patient is given a number and all articles sent must be marked with that number. A nylon bag is also provided together with a book for the patient to enter all articles sent. The book is in triplicate so that the top copy is given to the hospital receiving the bag, the second copy is retained in this department and the book is kept by the patient.

During the year nine new patients were added to the list. There were two deaths and six patients were admitted to either Hospital or a Home in the area. 5,500 articles of clothing were put through the washing machines at one of our local hospitals.

SEWERAGE and SEWAGE DISPOSAL

I have received the following report from Mr. P.C. Emes, Engineer, Surveyor and Planning Officer, giving list of drainage schemes and their progress during 1973:-

"The major scheme carried out during 1973 was the re-drainage scheme of West Horndon. The works proceeded for the first half of the year on schedule but then due to industrial dispute at the pump manufacturers and then the implimentation of the three day week, the works programme was unfortunately seriously disrupted. However, it is anticipated that in 1974 the works will be completed within the Contract period and therefore by the latter half of 1974, East Horndon Sewage Disposal Works will feel the benefits as will the village.

The design and completion of Contract Documents for the Shenfield Surface Water Drainage Scheme was completed in 1973, together with the D.O.E. approval to the engineering content of the scheme. At this point the cut back in public expenditure occurred and the whole scheme has had to be shelved pending financial approval from the new Anglian Water Authority. This has also been the case for the Wash Road scheme where after urgent investigation and detailed design, no money was found to be available for its implementation and the decision now rests with the Water Authority.

Other design works proceeded on schedule for Western Area Trunk Intercepter, Nags Head Lane Works and Brentwood Central Surface Water Drainage.

All of the sewage disposal works showed a continuing increase of flow during 1973, which was especially marked at the Shenfield and Hutton works.

(from 1st April, 1974, the responsibility for sewerage and sewage disposal amongst other things pass to the new Regional Water Authorities. Brentwood is unfortunately split, the western part being within the area of the Thames Water Authority and the remainder being in the area of the Anglian Water Authority. Programming of work and administration is thus made especially difficult.)

Operation, improvement and extensions of Sewage Disposal Works are now carried out by the respective Water Authorities who employ the staff and manual employees directly.

The Brentwood District Council will act as agents for the Water Authorities in respect of sewerage. The capital programme is controlled by the Regional Water Authorities. The immediate consequence of this is that the Capital Programme agreed by the Brentwood Urban District Council has been seriously disrupted and at the time of writing this report only two schemes have been approved for a start in 1974, Brentwood Central Surface Water Drainage Scheme (Thames Water Authority) and Mountnessing Drainage Scheme (Anglian Water Authroity) One can only hope that more approvals will be forthcoming in the near future. "

CLINICAL SESSIONS

The following is a list of the Clinical Sessions provided by the Essex Area Health Authority, Chelmsford, and held at the new Clinic, Coptfold House, Coptfold Road, Brentwood. (previously held at the Combined Treatment Centre, 39, Queens Road, Brentwood) Telephone: Brentwood 221313.

Number	Satisfactory	-	45
Number	Unsatisfactory	-	3

ICE-CREAM SAMPLES

Bacteriological Sampling

Number of Samples taken - 44

Number of Samples satisfactory - 44

OTHER FOOD

Bacteriological Sampling

1,041 Samples were taken from Fords Frozen Depot at Warley, only one of which was unsatisfactory - a remarkably good record.

POULTRY INSPECTION

There are no poultry processing premises in the area of the Urban District Council.

FOOD & DRUGS ACT, 1955 - FOOD SAMPLING

A total of 181 formal and informal samples were taken. All but nine of these were satisfactory. Proceedings were taken in two cases where the samples were unsatisfactory, and fines and costs amounting to a total of £148.00 were imposed.

SWIMMING BATH SAMPLES

Results of samples taken during 1973 were as follows:-

Bath	Samples taken:	Satisfactory:	Unsatisfacto:
Brentwood U.D.C. Bath	10	10	-
Brentwood Grammar School	1	1	-
Brentwood County High School	2	1	1
Shenfield Technical School	11	11	-
Ursuline Convent School	12	12	-
Pilgrims Hatch Junior School	7	7	-
St. Peter's Primary, Sth. Weald.	8	8	-
Brentwood Preparatory School	3	3	-
Hutton Poplars	11	10	1
West Horndon Primary School	4	4	-
Hogarth County Junior School	5	5	-
St. Charles Youth Treatment Cent	re 7	7	- 11

CLEAN AIR ACTS, 1956/1968

During the year a total of 346 visits were made and 331 smoke observations were made. No further Smoke Control Orders were made during 1973. It was not found necessary to take any legal proceedings. Five applications for the approval of chimney heights were received and all were granted.

NOISE ARATEMENT

A total of 29 complaints were made in respect of alleged noise nuisances and over 400 visits were made. Complaints included radio noise, barking dogs, noise from Clubs and noise from industry. Progress in this field is, in my view, slow and unsatisfactory and firmer measures to combat noise need to be taken, particularly noise from motor bikes.

REFUSE DISPOSAL

Arrangements for the disposal of refuse remained the same for the year 1973. With the enlargement of the district as from 1st April, 1974, therewill, no doubt, be problems which will have to be assessed and dealt with in the light of further experience.

OVERCROWDING

48 visits were made in connection with cases of overcrowding or alleged overcrowding. No formal action was taken in respect of any case.

COMMON LODGING HOUSES

There are no common lodging houses in the Urban District of Brentwood.

VISITS BY DISINFESTATION AND RODENT OPERATOR	
	Visits:
Laundry Service for the Incontinent (number of calls to patients)	1,043
Rat destruction	1,377
Disinfestation	122
Pond Treatment (Mosquito Control)	59
Drain Testing etc.	20
Assisting Public Health Inspectors	61
Rat destruction at Refuse Tip	24
Rat destruction at Sewage Works	20
Total:	2,726

MEAT INSPECTION

These figures are in respect of the Slaughterhouse at "Orchard Farm", Hall Lane, Little Warley, which is the only slaughterhouse in the area of the old Urban District.

Details of Inspection are as under - January to December, 1973.

	Cattle excluding Cows:	Cows:	Calves.	Sheep and Lambs:	Pigs:	Goats:
Number killed	2,257	609	99	4,095	48,992	3

The following is a copy of the Annual Report made to the Department of Employment :-

(a) Inspection Arrangements:

There has been no change in the District's Inspection arrangements. The six Public Health Inspectors each carry out work in respect of the Act.

(b) <u>Inspections</u>:

The number of general inspections has remained much the same as in 1972, but the total number of inspections, including general inspections, has almost doubled.

(c) Registration of Premises:

There has been a slight decrease in the number of premises registered with this Authority during this year. A number of premises closed owing to prospective Town Centre re-development, mainly offices and shops; and rationalisation and centralization in the solid fuel industry has caused the closure of the one remaining fuel storage depot.

There has been a slight increase in the number of persons employed in offices, but the number of male shop employees has fallen during the year, and as these figures were obtained before the present national emergency, the reason cannot be attributed to this cause.

(d) Accidents:

Seventeen non-fatal accidents were reported to us during the year, all of which were investigated. Eleven occurred in shops, three in offices and three in catering establishments. Falls, the use of hand tools, and accidents occurring whilst handling goods, again topped the list. Over the years, these three categories have consistently proved to be the worst offenders - the butchery trade being one of the most dangerous.

Offices, Shops and Railway Premises Act, 1963

(d) Accidents - continued -

This year's worst accident occurred in the Butchery Department of a Supermarket; a young man stabbed himself in the abdomen, narrowly missing his intestines and an artery whilst boning out a side of beef. Ironically, he was wearing a protective under-apron (which is the standard issue of his firm) unlike many members of the butchery trade who have an apparent aversion to protecting themselves. However, these aprons have the unfortunate habit of riding up and consequently, his knife passed beneath it. Efforts to persuade the firm and its employees to provide and wear a protective apron secured at the bottom were rejected on the grounds of discomfort and inflexibility.

Machinery was involved in one instance only, where a maintenance fitter overhauling an ice making machine in a restaurant cut his hand severly whilst trying to free some rusty bolts. Subsequent examination of the machine, however showed no sharp metal edges. In fact, most of the edges had been dressed over to prevent this type of accident.

(e) Lift and Hoists Regulations:

Several contraventions were reported to this authority by the examining engineers. All were remedied within the stipulated time.

(f) Exemptions:

The only outstanding exemption, in respect of overcrowding in an office, expired during the year. The overcrowding had been abated when the firm in question moved to new and larger premises.

(g) Prosecutions:

No proceedings for offences against the Act were instituted during the year.

(h) Contraventions:

The number of contraventions discovered upon inspection dropped radically to 54 - well down on the previous year's figure. In the main, however, these offences occurred in offices. Offences in food shops and catering establishments in particular, tend to be dealt with by using the Food Hygiene (General) Regulations. No particular type of contravention stands out from the rest, except perhaps the lack of cleanliness of sanitary accommodation and washing facilities.

(i) The last 10 years:

You ask for a brief note relating to the successes and failures of the Act over the past ten years - a difficult task! However, I do consider the Act has been successful, nowhere more than in the field of accident prevention and particularly where mechanical equipment is concerned. There are obviously grounds for improvement, but then, there always is. Nevertheless, in my opinion, machinery is far less dangerous than it was and there is an awareness, particularly amongst the designers of machinery in this country, of safety standards and requirements. Many of the National Chain Store groups are employing advisers in Safety and Hygiene, and I believe this is reflected in the type of accidents now reported to us.

In general, the type of contravention has changed. Where once facilities were asked for, now we ask for those already provided to be cleaned. Contraventions in newly opened buildings seem to be less as Architects are more aware of the Act's requirements.

(i) The last 10 years - continued -

In this District, as in many others, the opportunity is taken to examine the plans of proposed developments and advice is given on the Act's requirements at this stage. Thus forestalling trouble at a later date.

There has not been time, with the department's other commitments, to carry out any special enquiries so that if my comments appear to be no more than generalisations, you must forgive me.

Trends in Modern Buildings:

(1) Heating, Ventilation & Air Conditioning:

Few of the registered buildings in the area are so large that extensive plant is required. The largest building's air conditioning plant did cause problems, not in the building, but externally. The water cooling plant's fans created a noise nuisance affecting a resident living near to the plant. Heating generally is adequate, but the tendency is to rely on electric night storage heaters, rather more than any other form of heating. Obvious problems occur, particularly during times of national emergency with fuel cuts causing havoc.

(2) Standards of Natural and Artificial Lighting:

In most instances these are high and both types of lighting complement the other. Ironically, complaints have been received from time to time relating to glare, particularly in the late afternoons of Spring and Autumn, when the sun is low in the sky. Requests are made to employers to provide blinds and in most cases they do, but I query the enforcability of the request.

(3) Structural Gauses of Solar Gain:

Little in the way of complaint has been reported to us.

(4) Allocation of Space in Working and Storage Areas:

Little overcrowding has been encountered in modern offices; the trouble has been found more in older premises, often adapted from their original purpose to serve in another capacity - odd shaped rooms being a common feature of such buildings.

(5) Provision for the Disposal of Waste and Refuse:

(a) Soil & Sewage:

In some instances, serious nuisance has arisen because of the installation of sink waste disposal units. The largest office in the district, for instance, employing over two-thousand persons was a major offender. Placed in a pleasant rural setting and connected to an existing sewer, it was not long before the burden placed on the sewer and sewage treatment plant, caused blockages and failure of the biological filters at the small sewage works. It was found that the waste disposal's maceration units chopped food particles into a fine colliodal suspension, each particle being coated with grease. The grease trap which was installed failed to work adequately and then the nuisance arose. Following this experience, waste disposal units have been discouraged.

Provision for the Disposal of Waste and Refuse - continued -

(a) Soil & Sewage - continued -

Not enough thought had been given to the consequence of building such a large establishment, in what was essentially a very rural area.

(b) Refuse and Waste Paper:

Experience shows that where common facilities are provided for shopping parades, areades etc., there will be a perennial nuisance unless the occupiers concerned are exceptional characters, or join together to employ someone to look after the yard or refuse storage area - in itself, unlikely.

Rarely do the provision of common storage facilities work; if they are not abused by the occupiers of the premises served, outsiders cause trouble instead. In my opinion, it is far better if each premises is provided with its own individual storage facilities for both refuse and cardboard and paper waste. The problems may not be so acute where daily refuse collections can be arranged, but this is not the situation in this authority's area, or, presumably in many others. Consequently, these shopping parades are a constant source of trouble.

This is one field where recent discussions on a proposed shopping redevelopment appear to have failed at the planning stage.

(6) Design of Staircases, Floors and Passages:

No trouble has arisen in modern buildings in regard to the above, except in a large Builders' Merchants establishment, who was found to be storing items on the stairs. He ceased to do so when requested.

(7) Sanitary Accommodation, Washing Facilities etc.

As most Architects are now aware of the standard required, little trouble has been found regarding this matter.

(8) Lift, Hoists and other Mechanical Handling Arrangements:

Few buildings in the area have lifts, so it is rarely that trouble arises. When it has, remedial action has been taken well within the time stipulated by the examining engineers.

Some difficulty has arisen from time to time over the handling of palletised goods in supermarkets. Nylon wheels have to be checked occasionally and other trouble has arisen because of ill-defined edges of loading bays.

Of necessity, the foregoing comments have been kept as brief as possible.

HOUSING

In this necessarily abbreviated Annual Report I wish to make no particular comment except to acknowledge the very valuable work done by the Deputy Chief Public Health Inspector in connection with Improvement Grants, 81 applications have been dealt with by the department during the course of the year. Statistics are given below:-

HOUSING STATISTICS

Slum Clearance and Repair -

Houses in clearance areas and unfit houses elsewhere :-	
(a) Houses demolished during the year	Nil
(b) Unfit houses closed during the year	3
(c) Unfit houses made fit and houses in which defects were remedied :-	
(i) after informal action by Local Authority	26
(ii) after formal notice under Section 9 (1) and 16 (1) Housing Act, 1957 :- (a) by owner	3
(b) by Local Authority	-
after formal notice under Public Health Acts	12
after determination of Closing Orders	2
(iii) Other houses in which defects were remedied	4
