HEALTH DEPARTMENT, SPRINGFIELD, MAIDSTONE.

To the Chairman and Members of the Kent County Council

I present my Annual Reports as County Medical Officer and Principal School Medical Officer for 1970.

A. ELLIOTT M.D., D.P.H.

#### ANNUAL REPORT

#### Vital Statistics

POPULATION - The Registrar-General's estimate of the population of the Administrative County at the middle of 1970 was 1, 361, 190 and this population is the basis of the rates quoted in this Report. Table 1 at the end of the Report shows the population in each area in the County: and from that Table it will be seen that 914, 380 persons were resident in the urban areas, and 446, 810 in the rural districts.

BIRTHS - The births of living children, registered during 1970, totalled 21, 864. Male births numbered 11, 236, female births 10, 628.

The crude\* birth-rates for the year were 16.1 (comparable rate  $\neq$  17.55) in the urban districts, 16.2 (comparable rate 17.01) in the rural districts and 15.9 (comparable rate 17.01) in the County as a whole. The figure for England & Wales was 16.0.

The number of births, and the birth rates, in each sanitary district of the County, are set out in Table 1 at the end of this report.

The excess of births over deaths was 4, 969-2, 834 males and 2, 135 females.

The sex-ratio of the births, on the figures shown above, represents a proportion of slightly less than 106 males to 100 females.

STILL-BIRTHS - The number of still-births recorded during the year was 270. This number represents a proportion of 12 per thousand of all births in the County. This proportion may be compared with the rate for England and Wales of 13.

The rate of still-births (per thousand total live and still births) was 12 in urban and 13 in rural districts, and 12.00 in the County as a whole.

The number of still-births in each sanitary district of the County is shown in Table 1 at the end of this report.

INFANTILE MORTALITY - There were 348 deaths of infants under one year of age in Kent during the year, which represents an infantile mortality rate (number of deaths among children under one year of age per thousand live births) of 16. The infantile mortality rate per 1,000 legitimate births is 15 and per 1,000 illegitimate births is 26.

These deaths of infants formed 2.0 per cent. of the total deaths at all ages.

NEO-NATAL MORTALITY - There were 243 deaths of infants under four weeks of age during the year, which represents a neo-natal mortality rate (number of deaths among children under four weeks of age per thousand related live births) of 11.

EARLY NEO-NATAL MORTALITY - There were 211 deaths of infants under one week during the year, which represents an early neo-natal mortality rate (deaths under one week per 1,000 total live births) of 10.

PERINATAL MORTALITY - There were 481 stillbirths and deaths under one week combined during the year, which represents a perinatal mortality rate (deaths under one week and stillbirths combined per 1,000 total live and stillbirths) of 21.7.

Of the 21,864 births in the County, 1,405 were illegitimate, being 6.4 per cent. of the total.

MATERNAL MORTALITY - There were 3 maternal deaths (including abortion) which represents a maternal mortality rate (maternal deaths per 1,000 total births), of 0.1.

The rates in the different sanitary district will be found in Table 1 at the end of this report.

DEATHS - The number of deaths registered in the County (i.e. the number of deaths of persons resident in Kent) during 1970 was 16, 895. Male deaths totalled 8, 402 female deaths 8, 493.

Crude death-rates were 13.0 for the urban areas, 11.2 for the rural districts, and 12.4 for the whole County.

The number of deaths in each sanitary district, and the deaths in age-groups, and by cause, are shown in Tables at the end of this report.

- \* Crude birth and death-rates are the number of births or deaths per 1,000 of the population.
- → For explanation see page 19.

The principal causes of death in order of importance show little variation from year to year, and the following table shows the order of the principal causes in 1970, the number of deaths under each heading, the death-rate, and the percentage of each group to the total number of deaths from all causes:

Cause of death	Number of Deaths	Number of deaths per 1,000 population	Percentage to the total number of deaths from all causes	
Heart Disease	5, 191	3.81	30.73	
Cancer (all sites)	3, 361	2.47	19.89	
Other Circulatory Diseases	3, 128	2,21	18.51	
Pneumonia	1, 297	0.95	7.68	
Bronchitis and Emphysema	802	0.59	4.75	
Violence (all forms)	516	0.38	3.05	
Hypertensive Disease	345	0.25	2.04	
Influenza	248	0.18	1.47	
Other Diseases of respiratory				
system	196	0.14	1.16	
Peptic Ulcer	138	0.10	0.81	
Diabetes	131	0.10	0.78	
Nephritis and Nephrosis	66	0.04	0.39	
Tuberculosis (all forms)	26	0.02	0.15	
Asthma	25	0.02	0.14	
TOTALS	15, 470	11.37	91.57	

#### NOTIFIABLE INFECTIOUS DISEASES

The number of notifications of infectious diseases in each of the sanitary districts in Kent is shown in Table 2 at the end of this report.

SMALLPOX - Once again no cases occurred during the year. It is now twenty-four years since the last case was notified.

SCARLET FEVER - There were 455 cases notified.

DIPTHERIA - There were no cases of diptheria reported in the County.

MEASLES - There were 13,942 cases reported. One death occurred in a child under the age of four years.

WHOOPING COUGH - 223 cases were reported. One death occurred in a child under one year of age.

POLIOMYELITIS AND POLIOENCEPHALITIS - There were no cases reported in the County.

Year	1961	1962	1963	1964	1965	1966	1967	1968	1969	1970
Notifications Paralytic	 5	4	2	2	1	-	1	-	1	-
Non-Paralytic	 1	2	-	-	1	1	-	-	-	-
DEATHS	 -	1	-	-	-	-	1	-	-	-

OPHTHALMIA NEONATORIUM - Fourteen cases were reported during the year.

#### MALIGNANT NEOPLASM

The following table shows the mortality from cancer recorded in Kent during the year.

#### VACCINATION AGAINST SMALLPOX

Under the Council's arrangements, only records of children vaccinated between the ages of one and two years are required.

The number vaccinated between these ages was 9,781, 44% of those who were eligible. Since the Department of Health and Social Security recommended that children should only be vaccinated against smallpox either by their own doctors or with the latter's knowledge and consent, there has been a drop in the number of children vaccinated.

#### DIPHTHERIA/WHOOPING COUGH/TETANUS IMMUNISATION

Following the introduction of the new schedule of vaccination and immunisation procedures at the end of 1968, the primary course of triple antigen, diphtheria/whooping cough/tetanus, consisting of three injections, is now started at six months of age. The third injection is now given six months after the second, and the number of courses completed in 1970 was 16, 531. Reinforcing injections against diptheria/tetanus are offered to children on school entry and again against tetanus on leaving school.

Facilities for immunisation were available at Child Health Clinics, doctors' surgeries and schools. 23,806 children received a reinforcing injection and of the children born in 1969, 54% were immunised by the end of the year.

#### VACCINATION AGAINST POLIOMYELITIS

Facilities continued to be made available at County clinics and by general practitioners and wherever possible the primary course is now given at the same time as the triple antigen, diphtheria/whooping cough/tetanus, starting at six months of age, followed by a fourth dose between the ages of five and fifteen years.

During the year 22, 838 children received a primary course of vaccination against poliomyelitis and 18,813 had a fourth dose. Of the children born in 1969, 74% were immunised by the end of the year.

#### VACCINATION AGAINST RUBELLA

During the year a scheme was introduced for the vaccination against Rubella of thirteen year old girls. Consent forms were distributed to all the schools concerned and by the end of the year 1, 996 had been vaccinated.

#### PREVENTION OF ILLNESS, CARE AND AFTER-CARE

The various services provided under Section 28 of the National Health Service Act, 1946, have been maintained during the year.

#### TUBERCULOSIS

#### NOTIFICATIONS

During the year 206 persons were notified as suffering from tuberculosis. On the 31st December, 6, 168 persons remained on the registers of medical officers of health. Summaries of notifications will be found on page 20.

#### PROVISION FOR EXTRA FOODS

623 recommendations were made by chest physicians, of which 586 were approved, the remainder not being approved as, at the time of recommendation, the patients' financial circumstances brought them outside the application of the Council's assessment regulations.

#### REHABILITATION

Persons suffering from inactive tuberculosis who are fit enough to undertake five hours' work a day can, on the recommendation of the chest physician, be admitted to rehabilitation units established at Preston Hall, Maidstone and Papworth Hall, Cambridge. At the end of 1970, 2 were receiving rehabilitation;

#### KENT COUNCIL OF SOCIAL SERVICE

This Council has continued to afford assistance to patients and their dependants in the form of extra milk, beds and bedding, clothing, holidays, materials for diversional therapy, finding suitable employment, fares to visit patients in sanatoria and hospitals, re-housing and removal expenses. The County Council make an annual grant for administrative expenses only.

#### B.C.G. VACCINATION

During 1970, 13, 616 schoolchildren aged 13 years and over were skin tested, 12, 218 were found to be negative and 12, 171 were vaccinated. All tuberculin positive children were referred to the chest physician concerned for further investigation.

As in former years, precautionary investigations of schoolchildren who had been in contact with known cases of pulmonary tuberculosis were continued. 200 children from 3 schools were skin tested of whom 72 were tuberculin positive and referred to the chest physician. Members of school staffs were also given an opportunity of attending for X-ray.

#### ASCERTAINMENT OF CONTACTS

Contacts of persons known to be suffering from tuberculosis are persuaded by the health visitor to attend the chest clinics for examination.

During the year 5, 232 contacts were examined and 18 were found to be tuberculous.

#### EMPLOYMENT OF PERSONS KNOWN TO BE SUFFERING FROM TUBERCULOSIS

Sputum positive cases are not generally encouraged to return to work but if they do, every precaution is taken to ensure that there is no spread of infection. Where the previous employment is not considered suitable, the Disablement Resettlement Officer of the Ministry of Labour, endeavours to find alternative employment or in certain cases the patient will undertake a course of training for work suitable to his condition.

#### ILLNESSES GENERALLY

#### RECUPERATIVE CARE

Recuperative residential care is provided under Sections 22 and 28 of the Act. This is restricted to instances where a child under 16 years has suffered from an illness which has been treated either in a hospital or at home and whilst needing further medical and /or nursing care of the type that can be provided by a general practitioner and home nurse, cannot have that care at home. An application was received for one child, who was sent away.

#### NURSING REQUISITES

The increasing demand for equipment is for chronic sick or severely handicapped persons who are partially or wholly confined to bed and for short-term acute illnesses. By the end of the year the total number of items of equipment on loan to patients had again increased by over 2,000.

Demand for the special pads made in County Training Centres for the home nursing of incontinent patients continues to increase and over 500,000 are now used in a year. Pants for incontinent patients together with disposable inners, are also supplied.

The types of special equipment in use at the end of the year and the costs are:-

			No. Issued in 1970	Total on Loan 31st December, 1970.	Cost £
Hoists			 117	153	10, 700
Lifting Poles			 179	276	3, 300
Hospital Beds			 106	117	3,000
Walking Sticks			 227	343	1,000
Walking Frames			 1, 366	2,011	6,000
Toilet Seats			 266	498	3, 500
Toilet Aids			 234	495	2, 200

Ejector Seat & Ch	airs		 127	195	5,000
Bath Seats and Bo	ards		 802	1, 613	3,000
Bath Rails			 422	962	5, 700
Bath Mats			 593	1,166	900
Cot Beds			 51	47	1,400
Ripple Beds			 644	224	7,000
Special Chairs (A	mesbu	rv etc.)	 8	23	700
Egerton Beds			 4	12	1,800
Easinurse Mattre	sses		 Company - Company	3	75
Foam Mattresses			 142	164	1,000
			5, 389	8, 436	57, 855

#### RENAL HAEMODIALYSIS

Thirty-eight premises have been converted or were in the course of conversion for the installation of artificial kidney machines of which eight were completed in 1970.

Nine were in the course of construction, fourteen were completed before 1970, and seven have been dismantled.

#### FLUORIDATION

No action has been taken by the County Council to raise to one part/million the level of fluoride in public water supplies as a measure of preventive medicine to reduce the incidence of dental disease in children.

#### VENEREAL DISEASE

Two women social welfare workers are attached to the venereal disease clinics in the County. They are responsible for tracing contacts of patients attending the clinics and following up those who do not maintain attendances for treatment. In the year 384 such persons were visited of whom subsequently 313 attended clinics.

#### HEALTH EDUCATION

Reliance continued to be placed usually on personal approaches by County staff such as doctors, dental surgeons, health visitors, midwives, nurses, welfare officers, etc. in the normal course of their duties. Lectures on various aspects of health education were given at schools by Assistant County Medical Officers, and on request to various organisations.

#### CERVICAL CYTOLOGY

By the end of 1970, 22 clinics all of which are staffed by members of the District Nursing Service who were trained in this work by senior staff, had been provided for the taking of cervical smears from women aged between 35 and 65 years. In general, the demand for the service from women has not been great since during the year 6, 283 smears were taken, of which 14 were positive. Many women do, of course, have their smears taken by their own doctors or at Family Planning Clinics.

#### DRIVING LICENCES - CASES REFERRED BY TAXATION LICENCES OFFICER

During the year 291 cases were reviewed where doubts arose as to the suitability, by reason of medical conditions, of the persons concerned to hold driving licences. In considering this number regard should be had to the issue in the year by the Council of 246, 261 driving licences. A classification of the conditions reviewed is:-

Epilepsy:	(Issued	116
The same of the sa	162 - (Refused	42
	(Revoked	4
Diabetes Mellitis:	(Issued	36
	38 - (Revoked	-
	(Refused	2
Cardiac Disease:	8 - (Issued	7
	° (Revoked	1
Mental Illness:	(Issued	17
	24 - (Refused	7
	(Revoked	-
Giddiness and Fainting:	26 (Issued	25
	(Revoked	1
Huntingdon's Chorea:	1 - Revoked	1
Mental Subnormality:	1 - Revoked	1
Unclassified;	(Issued	17
	31 - (Refused	3
	(Revoked	2
	(To take driving	test 9
	291	

On June 1st 1970 the law was changed to permit, under certain conditions, the granting of licences to persons suffering from epilepsy. Before this time a person suffering from epilepsy which, for practical purposes, meant any person who was receiving treatment for the disease, was legally debarred from holding a driving licence. The broad intention of the change in the law was to allow driving licences to be granted to people suffering from epilepsy who, on the basis of medical evidence, have been free from attacks for at least three years with or without treatment or who have a history of attacks only during sleep for more than three years. The application of these periods is not absolute because in each case the Authority must be satisfied that the driving of a motor vehicle by a person would not be likely to be a source of danger to the public.

The form of question now to be answered by applicants for driving licences has been changed and asks not only whether a person is suffering from epilepsy but whether he or she has had this condition at any time. Similarly, applicants are also called upon to answer the question as to whether they suffer from or have at any time had sudden attacks of disabling giddiness or fainting. Manifestly, no applicant's doctor can say with certainty that a patient's account of fits is correct since no doctor will be in constant attendance upon any patient. What doctors are, therefore, asked is whether they are able to confirm from their knowledge and belief that the answers given by applicants agree substantially with information they have in their medical records.

It will be seen that the number of applications from persons suffering from epilepsy has increased and this is due in the majority of cases to persons applying who had been refused licences before June 1st 1970. In a minority of cases, however, applicants had already held driving licences but for the first time disclosed a past history of epilepsy which, while not debarring them under the change in the law, might have debarred them in the past by reason of the fact that minimal treatment was continuing.

Dealing with these driving licence cases takes up a considerable amount of medical staff time because of the complexity of the issues involved and the need to make detailed enquiries into medical histories.

Although the number of cases of epileptics who have been granted driving licences has increased, it may be doubted whether this represents the true position since it is estimated that between four and six persons in every thousand of the population have this disease. In these cases the granting of a licence is now on an annual basis so that it will be possible to make reviews from time to time as to whether the pattern of disease changes in individual cases and, if so, the effect on the individual's suitability to hold a driving licence.

#### CHIROPODY SERVICE

The demand for the Service continues to increase, the number of treatments provided being restricted by the limited availability of premises, and staff, to an increase of 5% on the previous year.

The staff at 31.12.70 was Principal Chiropodist, 18 full-time Chiropodists, 14 part-time Chiropodists, providing 224 sessions each week in 39 Clinics.

There were 31 Chiropodists in private practice providing treatments on a fee-per-treatment basis. 16% of the treatments provided, were given in the patients' own homes.

#### CARE OF MOTHERS AND YOUNG CHILDREN

#### NOTIFICATION OF BIRTHS

The notifications of births for women resident in Kent in 1970 were;-

		Domiciliary	Hospital & Nursing Homes
Live Births	 	5, 142	16, 827
Still Births	 	9	183
		5, 151	17, 010

#### CENTRES AND CLINICS

At the end of 1970 the 235 Child Health Clinics were staffed by medical officers thus:-

- 19 Full-time Departmental Medical Officers
- 7 Part-time Departmental Medical Officers
- 99 Doctors in general practice engaged on a sessional basis
- 21 Medical Officers engaged on a part-time basis

146

#### Child Health Clinics

Infants under 1 year					172,743				
Children 1 - 2 years					44, 978	Tota	al Atten	dances	267, 078
Children 2 - 5 years					49, 357	(In 1	969 - 2	66, 205	i)
Total number of such o	hildren	attendi	ing duri	ng the	year				58, 955
Number of infants unde	r 1 atte	ending f	or the f	irst t	ime				17,842

#### County Midwives - Ante-Natal Clinics

Total attendances .. .. 8,819

#### Relaxation and Mothercraft Classes

Attendances .. .. .. 16,219

#### INCIDENCE OF CONGENITAL MALFORMATIONS

All congenital malformations apparent at birth of children, whose home addresses are in the County and who are born in the County or elsewhere, are recorded. The object of the scheme, which includes still-births as well as live-births, is to enable the Registrar General to compile statistical information from which it should be possible to detect any national or regional variation in the incidence of malformations.

During 1970 the Registrar General was given information about 386 children having one or more congenital malformations.

#### UNMARRIED MOTHERS AND THEIR CHILDREN

Financial responsibility was accepted for the residential care at voluntary homes of 145 unmarried mothers and their babies.

#### HEALTH VISITING

At the end of the year there were 199 health visitors in post including 18 part-time and 22 student health visitors.

Health visitors work in close association with general practitioners and at the year's end there were 94 arrangements whereby health visitors were attached to individual or grouped general practitioners who held their own child health, ante-natal, hearing, immunisations clinics, etc.

Health visitors home visits were:-

To expectant mothers			 2,847	
To infants under 1 year			 132, 360	
To children aged 1 and und	er 2 years		 64, 109	
To children aged 2 and und	er 5 years		 118,740	
To patients with tuberculos	is		 4,684	
Other visits (hospital care,	care of			
old people etc.)			 54, 814	
TO	TAL VISIT	s	377, 554	(In 1969 397, 791)

Health visitors made one home visit for every notified birth with subsequent visits on a selective basis according to needs.

Health visitors continued to give screening tests of hearing to children under five years of age. During the year they tested 18, 253 children and of that number 184 were re-tested by a Senior Medical Officer and the Senior Teacher of the Deaf. If this further test suggested impaired hearing, the child's general practitioner was consulted and an Otologist's opinion was subsequently obtained before discussion by one of the Council's assessment panels.

At the end of the year 362 premises with accommodation for 9, 643 children were registered. There were 573 child minders registered for a total of 2,885 children.

#### DOMESTIC HELP SERVICE

Service was provided in 8,197 households by reason of the presence there of:-

(i)	Aged Persons				6,556				
(ii)	Persons suffering from tube	erculosis							
	and chronic illness				489				
(iii)	Mentally disordered person	s			14				
(iv)	Maternity patients				575				
(v)	Other illness	**			467				
	Number of helps employed part-time at end of year								

#### Family Care Service

The service provides temporary help during the absence of the mother in households with two or more children in circumstances when, if such help were not available, there would be no alternative but for the Children's Committee to take the children into care.

In 1970 help was provided for 129 families with 454 children. The needs for this service arose from the admission of the mother to hospital (67), institutional confinement, etc. (30), desertion of the mother (24), and death of the mother (6).

#### Family Welfare Service

The Family Welfare Service, provided free of cost to the parents, gives intensive training for a period of three months in households by workers who teach the mother child care and methods of house-craft including cleaning, cooking, washing and budgeting. The course of training is succeeded by a follow-on course of six hours a week for nine months. In the case of families where there is medical evidence of mental subnormality, consideration is given to the service continuing after the initial period of three months for not more than twelve hours weekly until the youngest child of the family reaches compulsory school age.

The Family Welfare Service is considered in the following circumstances:-

- (a) In households where the habits, behaviour and standards of living in the family are low and the provision of the service is likely to raise the standard of living of the family, improve the welfare of the children and prevent the break-up of the family.
- (b) In the rehabilitation of families who are being rehoused and who have been previously evicted from their homes through arrears of rent or being unsatisfactory tenants.
- (c) Where advice on household management and budgeting may defer or prevent the eviction of families who are District Council tenants and who have fallen into arrears with rent. The existence of rent arrears is, however, not of itself a reason for the service being provided.

During the year 31 applications for Family Welfare Service were considered:-

Source	No.	Family Welfare Service Provided	Family Welfare Service Pending	Family refused to accept Service	Service not considered justified	Provision of Service not practicable because of lack of rehousing, etc.
Housing Authorities	1	-	_	-	1	-
Health Visitors	20	7	3	5	4	1
Children's Officer	10	5	2	2	And heavy some	1
TOTAL	31	12	5	7	5	2

#### Results of Service

During 1970, 26 families had Family Welfare Service, 12 commencing the initial service and 14 continuing from the previous year.

Assessment of results in the 26 families indicates:-

(i)	Considerable success		 	 23%
(ii)	Partial success	 	 	 59%
(iii)	No apparent success	 	 	 18%

#### Night Attendant and Evening Service

During the year help was given to 252 new applicants; 172 received night service and 80 received evening service. The sources of requests for service followed the usual pattern, 159 coming from patients' doctors. As at the end of 1969 service was being given in 39 cases, a total of 291 received help during 1970. Of this figure 256 cases ended during the year, the principal reasons being admission to hospital or a home (94) improvement (63) or death (59).

#### MIDWIFERY AND NURSING SERVICES

The professional staff establishment in 1970 was six senior midwifery and nursing officers and the whole-time equivalent of 183 midwives and 230 district nurses.

#### MIDWIFERY SERVICE

The numbers of domiciliary midwives practising at 31st December, 1970, with the corresponding figures for 1969 in brackets were:-

County Midwives and Nurse	/Midwives	in pos	t	 219	(223)
Other Domiciliary Midwives				 	(3)

The number of deliveries attended by domiciliary midwives during the two years 1969 and 1970 were:-

		1969	1970
By County Midwives and Nurse/Midwives	 	 6,061	5, 181
By other Domiciliary Midwives	 	 7	3

The Midwives Act, 1951, requires the Council to exercise supervisory duties over all practising midwives and at the end of 1970 such duties covered midwives practising in the following establishments (the figures in brackets are for 1969):-

In N.H.S. Hospitals	 	 	 253	(250)
In Private Nursing Homes	 	 	 6	(6)
In Military Families Hospitals	 	 	 0	(6)

#### DOMICILIARY CARE OF HOSPITAL PATIENTS

The continuing demand for hospital care necessitates the discharge of a considerable number of patients to the care of domiciliary midwives within the first ten days of the puerperium, in many instances shortly after the delivery. In 1970 there were 4,986 maternity patients transferred early from institutional to domiciliary care, compared with 4,294 in 1969.

#### MATERNAL MORTALITY

A maternal death is one due to or associated with pregnancy, childbirth or abortion. As part of a continuing national enquiry, it is the practice to investigate the circumstances of each death ostensibly due to or associated with maternal factors and the deaths during 1970 of two women were so investigated.

#### DISTRICT TRAINING OF PUPIL-MIDWIVES

All pupil-midwives must have three months' training in district midwifery. They receive instruction from district midwives approved as teachers by the Central Midwives Board and at the end of the year 64 County midwives were so qualified.

During the year 187 pupil-midwives completed their domiciliary training with County midwives, the corresponding figure for 1969 being 171.

#### COURSES OF INSTRUCTION FOR MIDWIVES

The Rules of the Central Midwives Board require midwives who are in regular practice to attend a residential midwifery refresher course at five yearly intervals and 37 of the Council's midwives and nurse-midwives attended during the year.

In 1924 the Council commenced non-residential refresher courses of one week's duration for midwives. Apart from the war years and three subsequent years, the courses have been held annually.

#### EMPLOYMENT OF DOMICILIARY MIDWIVES IN HOSPITAL

A pilot scheme was established in 1967 for County midwives to accompany certain of their patients into the West Kent General Hospital in Maidstone, there deliver them and, following their early discharge, to continue with their care in their own homes. Similar arrangements were concluded subsequently with Hospital Management Committees and in the year 2 additional schemes were commenced making a total of 11 that were operating by 31st December, 1970.

## THE ATTACHMENT OF DOMICILIARY MIDWIVES AND NURSES TO, OR THEIR ASSOCIATION WITH GENERAL PRACTICES

Where attachment of domiciliary staff to general practice is the objective, it is necessary to examine the position created by the disparity between the number of such staff in a particular area and the greater number of doctors with whom they have to work. Another consideration is that, unlike the general practitioners, each midwife and nurse will have been working within a defined district.

To secure closer working association of the domiciliary staff with general practices further discussions took place in 1970, as in previous years, between the doctors and the senior midwifery and nursing staff. Whilst there are a few areas where attachment is not yet possible, over three-quarters of the Council's midwives and nurses are now attached to individual general practitioners or groups of practices.

#### DISTRICT NURSING SERVICE

In 1970, district nurses made 694, 203 nursing attendances to 29, 024 patients, as compared with 608, 814 nursing attendances to 24, 214 patients in 1969.

Of the patients attended 64.8% were sixty-five years of age or over, and the nursing attendances to them formed 63.2% of the total; the corresponding percentages for 1969 were 66.9 and 63.8 respectively. There were 7,789 patients who received 159,329 visits solely for injections, as compared with 6,240 patients who received 143,202 such visits in 1969.

#### POST-REGISTRATION TRAINING

In 1970 the Council held its 20th non-residential refresher course for district nurses; such a course had been held in each year from 1950 with the exception of 1967.

#### DISTRICT NURSE TRAINING

Courses of instruction in district nursing are provided for the National Certificate in District Nursing. The training is for a maximum of sixteen weeks, but this period is reduced to one of twelve weeks in the case of candidates with particular experience and qualifications. It includes the adaptation of hospital nursing techniques to nursing in the home, the nursing of illnesses met infrequently in hospital, sufficient knowledge of the social services to recognise when one or more of these services might be necessary for the patient's welfare, the teaching of home care to relatives of the patient and the use of opportunities for health education. The Council held three courses during the year, making a total of 18, and all of the candidates, from its own staff and of other local health authorities, were successful in the examinations for the National Certificate in District Nursing.

#### INTEGRATED TRAINING SCHEMES

During 1970, members of the Council's senior nursing staff had meetings with their counterparts in 7 nurse training schools in the County to arrange for the introduction of facilities for training student nurses in the provision of community care services, to meet the changed syllabus of the General Nursing Council. Discussions were also held with the staff of 2 hospital midwifery training schools to introduce a single period of midwifery training.

Of the 46 County district councils in Kent, 24 exercised by delegation the County Council's functions for the registration and inspection of nursing homes. In the remaining 22 districts there were 23 homes registered by the Council at the end of the year, only two of which received maternity patients.

#### MANAGEMENT OF NURSING SERVICES STAFF

During the year arrangements were made to provide an integrated management structure for the midwifery, nursing and health visiting services on the lines advocated in the Report of the Working Party on Management Structure in the Local Authority Nursing Services. The Council was required by the Department of Health and Social Security to report by the end of the year the progress made for the introduction of the new structure. As budgetary provision was available it was possible to inform the Department that the appointments for the new management arrangements dealing with top, middle and part of first line were operative from 31st December.

#### AMBULANCE SERVICE

The service is provided from seventeen ambulance stations, including one small station operated by the St. John Ambulance Brigade under agency arrangements and a station in Canterbury from which a service is provided jointly by the City Council and the County Council for Canterbury and the surrounding County area. Included in the Council's management is the Hospital Car Service which provides supplementary transport for sitting patients.

The County Council has special arrangements with Canterbury City Council and the Greater London Council for the conveyance of patients suffering from smallpox and typhus.

The Ambulance Service for Dartford Borough and Dartford Rural District is provided by the Greater London Council on an agency basis, but arrangements were well advanced during the year to terminate this agency by the opening of the new County ambulance station at Dartford early in 1971.

As from 1st January, 1970, the County Council assumed direct responsibility for the Ambulance Service in Lydd, taking over the premises and staff from the St. John Ambulance Brigade who had provided the service on an agency basis since 1947.

On five occasions Service helicopters were used, at a cost of £764, to take patients with serious injuries which precluded them from being taken by road or rail to specialist hospitals, such as Stoke Mandeville Hospital, Buckinghamshire.

The radio network has seven main fixed stations, 200 two-way sets in ambulances and 80 in midwives' cars.

Two members of the staff attended ambulance instructors' courses provided by the Department of Health and Social Security.

Courses of instruction were provided at the County Council's Training Schools at Maidstone and Canterbury for 112 ambulancemen enabling them to qualify for the Proficiency Certificate of the Department of Health and Social Security and an enhanced rate of pay.

The total number of emergency calls rose from 19, 366 in 1969 to 20, 737 in 1970, an increase of 7.1%.

The Hospital Car Service, organised as an integral part of the Ambulance Service, carried 28,959 patients, an increase of 5,342 or 22.6% on 1969.

An industrial dispute, lasting some five weeks in the latter part of the year, reduced the number of patients carried, since certain ambulancemen refused to carry certain groups of patients. The total number carried in 1970, however, was 681, 918 an increase of 0.5% from 1969.

The vehicle strength at the end of 1970 was:-

		Stretcher	Sitting Case Ambulances	Dual-Purpose Ambulances
Vehicles operated by the County Council	 	50	96	59
County vehicles allocated to Canterbury Joint Service	 	5	3	2
County vehicles operated by St. John Ambulance Brigade	 	1	-	-
		61	99	61
				-

Ambulance Service Vehicles	0001		1969	1970
Total mileage		 	3, 642, 794	3, 533, 220
Number of journeys		 	114, 694	115, 171
Number of patients car	ried	 	654, 592	652, 959
Number of emergency	patients	 	19, 596	19,676
Number of emergency	calls	 	19, 366	20, 737

Patients conveyed by ra		 	3, 990	4,160
Patients conveyed by a	ir	 	4	5
Babies born in ambular	nces	 	17	18

The average time from receiving an emergency call to reaching the scene was 6.9 minutes for the 20,737 calls involved.

#### MENTAL HEALTH SERVICE

No new hostels or training centres were opened during the year but a new 25 place hostel for mentally handicapped adults at Stanhope Road, Ashford was being built to open in 1971.

Four members of staff were attending a Diploma Course in Mental Health at the end of the year.

The amount earned by persons attending adult centres during the year and undertaking industrial outwork was £26, 258.

At the end of the year the following Centres were in use:-

Ashford Combined Training Centre
Bobbing Combined Training Centre
Brasted Combined Training Centre
Hildenborough Combined Training Centre
Folkestone Hostel and Combined Training Centre
Maidstone Hostel and Combined Training Centre
Rusthall Elms Hostel and Day Centre
Rochester Junior Training Centre
Rochester Adult Training Centre
Swanley Adult Training Centre
Darenth Adult Training Centre

The arrangement whereby two Medical Officers attend a weekly or fortnightly session in the paediatric department of local hospitals as clinical assistants has continued. Four members of the medical staff attended a course on the assessment of hearing handicaps, and two attended courses on developmental paediatrics.

Two members of the medical staff attended courses on the ascertainment of educationally subnormal children and three attended a refresher course on this subject. 29 of the medical staff are now qualified for the examination of educationally subnormal pupils.

Details of the attendance at County Child Health Clinics by whole-time Medical Officers on the staff of the Education Committee are given in the Report of the County Medical Officer; four Medical Officers give part-time assistance to the Mental Health Service and eighteen Medical Officers carried out routine examinations at County Children's Homes.

#### MEDICAL INSPECTIONS

Arrangements are for pupils to be examined on entry to school, on admission to secondary schools, and before leaving. Pupils aged eight years have tests of vision and hearing only, the latter being by audiometry. These children have a full medical examination if such need is suggested by their previous history, or if requested by a parent or teacher.

The number of children examined during 1970 in the routine age groups was 66,782, which represents 30.5 per cent of the pupils on the school rolls. This figure includes 16,517 pupils aged 8 years, of whom 599 had a full examination and 15,918 tests of vision and hearing only. In addition 14,906 pupils found to have defects were re-examined.

#### FINDINGS AT MEDICAL INSPECTIONS

Table II on page 31 shows the principal defects found at medical inspections.

At the inspections of routine ages 11,491 children (17.2 per cent of the children examined) were found to have defects requiring medical treatment.

#### CLASSIFICATION OF THE PHYSICAL CONDITION

Two categories are provided, i.e., "Satisfactory" and "Unsatisfactory". It will be seen from the figures given in table I(A) on page 30 that during 1970 only 0.63 per cent of the children examined in the routine age groups were considered to be "unsatisfactory".

#### FOLLOWING UP

Where the parents attend at the routine medical inspection, advice is given and any defect is discussed by the doctor. Where necessary, Health Visitors visit homes to ensure that the advice of the doctor is carried out.

#### MEDICAL TREATMENT

Table III on page 32 gives details of the amount of treatment given during the year,

- (a) School Clinics Advice was given by the Health Visitors under the direction of the medical officers for 1,620 defects.
- (b) <u>Visual Defects</u> The number of children examined by the Ophthalmologists under the Council's arrangements was 11,947 and Spectacles were prescribed for 4,025
- (c) Orthopaedic Defects Physiotherapy has been provided at special schools as follows:-

0.1 1	Ne	o, of children treat	ted	No. of
School	Spring Term	Summer Term	Autumn Term	treatments given
Spring Gardens, Rusthall	6	5	6	167
Lalcham and Gap House	79	81	90	2,430
St. Anthony's, Margate	11	14	16	118
Valence, Westerham	48*	70*	69*	2,357

<sup>(\* -</sup> No. of children seen by orthopaedic surgeon)

(d) Enuresis - Under the supervision of Departmental Medical Officers or Child Guidance Clinics electrical appliances for the treatment of bed-wetting are loaned to the parents of affected children, and of the 133 children who completed courses of treatment during the year, 49 were cured and 40 improved.

#### CHILD GUIDANCE SERVICE

There was a small reduction in the number of children seen in 1970 as compared with 1969, mainly because of the long illness, ending in retirement, of the consultant psychiatrist at the Tunbridge Wells Clinic. No locum arrangements could be made by the Regional Hospital Board until after the end of the year.

					1	Numbe	r Disc	harge	d

			-
			2,189
			-

Speech therapists visit the nine Training Centres for mentally subnormal children to give guidance to the staff about speech development in the children.

A group consisting of five speech therapists and one senior health visitor has been responsible for compiling three pamphlets entitled "Infant Gossip", "Into the World of Words" and "The Role of the Health Visitor in relation to Speech Development". The publication of these pamphlets by the Council has been widely welcomed. "Infant Gossip" deals with a child's needs between birth and the onset of words if speech is to develop normally, while "Into the World of Words" deals with speech development following onset of words. These two pamphlets are for distribution to parents by health visitors when visiting babies and pre-school children. The third pamphlet is for the guidance of health visitors.

On December 31st, 1970, the speech therapists in post were equivalent to 12.7 full time staff out of an establishment of 17.

#### DENTAL SERVICE

#### Mr. E. Millward, Principal School Dental Officer reports:-

The staffing position remains little altered at 31st December, 1970, from the situation at 31st December, 1969. It is now the equivalent of 32.2 whole-time officers as against 32.6 last year. The staff at the end of 1970 was:-

- 1 Principal School Dental Officer
- 2 Whole-time Orthodontic Dental Surgeons
- 25 Whole-time Dental Surgeons
- 11 Part-time Dental Surgeons working the equivalent of 4.2 whole-time officers
- 3 Whole-time Dental Auxiliaries

- 1 Part-time Dental Auxiliary
- 1 Chief Technician
- 4 Senior Technicians
- 2 Apprentice Technicians
- 35 Surgery Assistants (whole-time)
- 5 Surgery Assistants (part-time) equivalent to 1 additional whole-time assistant

<sup>\*</sup> from 1st July. Earlier figures included with those for Chatham

As the number of children attending County schools continues to increase the ratio of Dental Officers to children has again fallen, being now only one Dental Officer to every 6,967 children.

The number of children inspected during the year has, however, risen by over 3,000 to 82,006. Whilst this still represents a relatively low percentage of the total school population, a slightly smaller percentage of these children was found to be in need of treatment though the decrease is of such a nature as would be called statistically insignificant. Of the parents of those children to whom an offer to carry out necessary treatment was made, the percentage accepting and receiving treatment increased from 61% to 66%. Because less staff was available, the total work completed decreased but the amount completed by each officer per session has increased.

The demand for orthodontic treatment continues at a high level but a number of children discontinue their treatment before it can finally be completed to the orthodontists' satisfaction. This type of treatment often takes a long time to complete and the patients, and parents, sometimes grow weary before final completion, accepting a lower standard than is sometimes desirable. Work done during the year in the laboratories was:-

Dentures	Denture	Orthodontic	Orthodontic	Crowns
	Repairs	Appliances	Repairs	Bridges, etc.
179	29	1,377	77	61

Owing to continued staff shortage in the County Laboratories, some work had again to be sent to outside contractors.

Once again it must be stated that the state of children's teeth is bad and the variation in the figures reported this year as compared to those for several years past is insignificant. Once again the need is emphasised for some measure to control the onset of dental decay and once again it must be said that the only available measure of preventive medicine is securing a level of one part per million of fluoride in water supplies. Reports from many areas in the world show that this measure will reduce by 50% the incidence of dental decay in children and as evidence accumulates it is apparent that this reduction continues into adult life.

#### HANDICAPPED PUPILS

Table V on page 34 gives details of handicapped pupils requiring education at special schools or in boarding homes.

#### BLIND AND PARTIALLY SIGHTED

All visually handicapped children now receive initial visits from a senior medical officer and the Supervisory Home Teacher of the Blind, follow-up visits being arranged as necessary.

#### DEAF AND PARTIALLY HEARING

#### Visiting Teachers of the Deaf and Partially Hearing

During 1970, teachers under the supervision of the Teacher in Charge of Educational Services for the Deaf and Partially Hearing visited 443 children to give individual auditory training, and help with lipreading and speech development as well as parental guidance.

#### Assessment

Teams consisting of a Medical Officer and a Visiting Teacher of the Partially Hearing tested the hearing of 342 children.

Any school child with impaired hearing who was causing concern was retested and, if necessary, referred to an assessment panel. There is now a regular monthly hearing assessment clinic at Canterbury, Chatham. Dartford, Maidstone, Rochester, Swanley, Swanscombe and Tonbridge, in addition to the continuance of home visits where necessary by one of the four doctor, teacher assessing teams.

#### Combined Assessment Panels

The work of the two panels continues. 37 children have been assessed and 133 reviewed by the Maidstone panel, and 25 children assessed and 52 reviewed by the Canterbury panel. These panels make recommendations as to treatment, the issue of hearing aids, and the provision of special educational treatment.
