E.D., M.R.S.H., M.A.P.H.I.

# Annual Report

OF THE

## Medical Officer of Health

FOR THE YEAR 1962.

MR. CHAIRMAN, LADIES AND GENTLEMEN,

I beg to present the Report on the health of the district for the year 1962.

The area is mainly agricultural, although on the coast many of the inhabitants are employed in seafaring pursuits. The beauty of the whole area, coast and inland, attracts many visitors throughout the year, the largest number, naturally, being during the summer months. Catering for these visitors is one of the main sources of livelihood for many residents of the district. There are, situated geographically within the district, the Urban Districts of Kingsbridge and Salcombe.

### PROVISIONS OF HEALTH SERVICES FOR THE AREA.

The personal health services are provided by various bodies, by far the greater part being under the control of the Regional Hospital Board, Devon County Council and the Local Executive Council. The environmental health services are controlled by the District Council.

The Public Health Laboratory Service has a laboratory in Plymouth for the investigation of communicable diseases and the examination of milk, water, ice cream, foodstuffs, etc.

The Devon County Health Handbook gives details of the health and allied social services in the County of Devon. Much of its information refers to the County as a whole, but there are details of the various services provided in this district.

### INFECTIOUS DISEASES.

There were four cases of infectious diseases during the year.

### FOOD POISONING.

The cases of food poisoning and dysentery were isolated. No cause could be found in either case.

## WATER SUPPLY.

The general supply is the South Devon Water Board. Moorland water from Dartmoor is supplied, being held before treatment in a reservoir formed by the Avon Dam. The water is treated by flocculation and filtration and it is chlorinated, the pH being adjusted before putting it into supply. There is also now an additional source of supply from the Ranney Works on the River Dart. This has proved to be a most economical and efficient system.

The quality of the water is of a very high standard and is adequate in quantity for the needs of the district. Frequent samples for chemical analysis are taken, all of which proved satisfactory. There is a continuing extension of the mains to take water to the remoter parts of the district.

Copies of reports on all samples taken by the Board are forwarded to this Department. We are kept fully informed on all matters of interest connected with water, for which I should like to express my gratitude.

Samples of water are taken in schools by the County Public Health Department. Copies of these reports are received.

There are a number of small private supplies. Inspection of these and sampling of the water is carried out as necessary.

## PUBLIC CONVENIENCES.

The conveniences at Thurlestone Sands have been completed. Conveniences are still needed at Strete Gate, Millbay Sands, Wonwell, Soar Mill and Lannacombe.

## HOUSING.

A number of unfit houses have been represented and closed in order that they be improved. Where it is possible to persuade owners to make houses fit, after re-housing the tenants, although the cost may be unreasonable, this is being done. The re-housing of the tenants is often one of the main difficulties to be overcome, but considerable progress has been made.

## INSPECTION AND SUPERVISION OF FOOD.

This work is still not being done as completely as one would wish, especially the inspection of hotels and boarding houses. Unfortunately when the need for their inspection is greatest, the Public Health Inspectors are most occupied with other essential work.

I am, Ladies and Gentlemen,

Your obedient Servant,

**R. B. WALKER,**

*Medical Officer of Health.*

October, 1963.

# Annual Report

OF

## The Chief Public Health Inspector

FOR THE YEAR 1962.

MR. CHAIRMAN, LADIES AND GENTLEMEN,

Herewith I submit the following report on the work of the Public Health Department during the year ended 31st December, 1962.

### SEWERAGE.

BROWNSTON. No movement has yet been made to improve the drainage system at this hamlet, but a sewage disposal system is certainly required.

KINGSTON. Conditions at the new disposal works have remained unsatisfactory due to the excessive quantity of surface and subsoil water entering the works through the old sections of sewers.

MALBOROUGH. The northern side of the village has now been re-sewered and a pumping station constructed to pump sewage into the main disposal works. This work has resulted in a great improvement in conditions in the northern part of the village.

GALMPTON. The work of constructing new sewers and disposal arrangements for Outer Hope Cove and Galmpton has not yet been started. The area is developing rapidly and some difficulty has been experienced in estimating future requirements. There is a danger that due to the time taken to complete sewerage schemes from inception to completion, new works in some areas may become inadequate soon after completion.

RINGMORE AND SHERFORD. New schemes for these two villages are well under way and it is anticipated that they will be completed at an early date.

SOUTH MILTON. The proposal to replace the old works with a pumping station to convey sewerage from the Thurlestone Sands area to the new disposal works at South Milton is well forward and work should commence at an early date.

OTHER SCHEMES. Schemes for dealing with sewerage and sewage disposal at West Charleton, South Pool and Strete are still in the hands of the Consulting Engineers. Reports and details are also awaited for dealing with unsatisfactory conditions at two old disposal works at Loddiswell and Modbury.

Conditions at Frogmore remain unsatisfactory and a scheme of sewerage and sewage disposal is badly needed at Challaborough, where the influx of summer visitors to the caravan sites, chalets and bungalows presents serious drainage problems.

**MAINTENANCE.** Following the report of the Organisation and Methods Consultants and some changes in staff, the opportunity was taken to re-organise the maintenance staff into two separate gangs. The new arrangements are working well, but with new works coming into operation further staff, and/or mechanisation will be necessary. The basic problem is of visiting the numerous works throughout the District on the scheduled maintenance dates. A great number of man hours is lost each year in travelling and I commend the idea of joint schemes where at all possible in the future.

## HOUSING.

Progress has been made in dealing with individual unfit dwellings in the district. The number of houses left to be dealt with is relatively small and the houses are scattered throughout the district.

Although it is the Council's policy to re-house tenants from individual unfit dwellings I think we are fortunate insofar as the majority of dwellings are not "lost," but tend to be made fit, in most cases at what appears to be unreasonable costs, by owners wishing to retire to this area or wishing to obtain holiday cottages.

A large number of properties still exist without modern facilities and until such time as legislation empowers Local Authorities to have such property brought up to modern standards, there appears little hope of making much progress.

## IMPROVEMENT GRANTS.

The number of applications for Improvement Grants during the year showed no marked increase. This is extremely disappointing when one considers the great number of houses existing in the district still without such basic necessities as hot water supply, bathroom, proper food store and readily accessible water closet and further publicity of the schemes for grant aid for modernisation of properties may assist in speeding up this work.

## MOVEABLE DWELLINGS.

The standard of moveable dwelling sites in the area shows a marked improvement and most site operators have a planned programme of improvement for the next two or three years in order to comply with all requirements of the new Regulations.

## MEAT INSPECTION.

The total number of carcasses inspected during the year showed a marked reduction and this was mainly due to the fall in the number of sheep killed.

The number of visits for inspection purposes also showed a substantial reduction. I welcome this, but even so meat inspection continues to take up a great deal of time in the work of the Department.

## REFUSE COLLECTION.

As one expects, the quantity of refuse collected is increasing year by year.

I am sure that the majority of ratepayers will welcome the Council's decision to inaugurate a weekly system of refuse collection next year.

The salvaging of scrap metals continues to bring in a small sum on the credit side of this service, and this is mainly due to the stirring efforts of one of our Councillors.

## LITTER.

It is difficult to see if there is any tangible improvement in the litter problem.

A much larger number of receptacles were used last year with resultant higher costs in the employment of local labour. It is quite impractical in an area such as this with numerous beaches open to the public, to provide litter receptacles and a collection service at all points where people congregate and until such time as the public themselves become litter conscious and are prepared to take active steps to report offenders, I believe this problem will remain.

## GENERAL ADMINISTRATION.

The total number of inspections made during the year showed an increase on that of last year with a substantial increase in the number of visits relating to sewerage and housing, two fields of work in which there remains a great deal to be done.

The number of inspections of food premises showed a further reduction on those of last year, and as the Medical Officer of Health has reported, there is a great deal of work which will have to be done in this sphere.

I am, Ladies and Gentlemen,

Your obedient Servant,

D. J. COLE,

*Chief Public Health Inspector.*

October, 1963.

## APPENDIX.

### STATISTICS AND SOCIAL CONDITIONS OF THE AREA.

Area—70,818 acres.

Population—11,350 (estimated).

Rateable Value—£142,388.

Sum represented by a Penny Rate—£570.9032.

### VITAL STATISTICS.

	LIVE BIRTHS.			Birth Rate per 1,000 of the estimated resident population.
	Total.	Males.	Females.

Petroleum Regulations .....	14
Dangerous Buildings .....	12
Drainage .....	185
Miscellaneous .....	117
Water Supplies .....	5
Food Poisoning .....	17
Total .....	1708

## MEAT INSPECTION.

During the year 712 visits were made to slaughterhouses.

The following carcasses were inspected :

Bulls .....	4
Cows .....	364
Heifers .....	414
Steers .....	476
Calves .....	344
Sheep .....	6690
Pigs .....	1020
TOTAL .....	9312

The total weight of meat condemned was 8 tons 3 cwts.

Diseased meat, etc. is collected by arrangement and converted into glues and fertilisers.

## Carcases and Offal inspected and Condemned in whole or in part.

	Cattle excluding Cows	Cows	Calves	Sheep and Lambs	Pigs	Horses
